69. G: Do you have any idea of what it costs to fully equip a V-75 battalion? S: I have no idea but I do know that a MIG-15 costs exactly 500,000 rubles (in old money) because I was ordered to destroy one in Turkey and I had to sign papers. Of course the MIG-17 and MIG-19 are far more expensive. Just keep in mind that for very overt things such as individual pay, cost of running academies and other military installations, that is where the military budget can be seen, but neither VARENTSOV nor GAU pay for the production of cannons and rockets. That is all done by secret allocations to factories which are all part of the GOSPLAN.

VCh — military (underlined) — KGB — Internal telephone

70. G: Let me see what other questions we have here. You mentioned VCh before and said you would get us a directory. S: I will give you a list of all the military units that I run across. I already gave you the academy and I will give you the one at Kapustin Yar as well as others. G: I mean the VCh of the telephone system. S: That is a classified telephone line used by the government and for other official purposes. Everyone in the General Staff does not have a VCh. G: Can it not be intercepted? S: I believe it is difficult to intercept and it is a line which is connected with all OKRUGS and even with the countries of Peoples' Democracies. There is an internal Kremlin line called the KREMLEVKA through which we can be switched through a switchboard, but this can be intercepted. The General Staff has its own circuit and to get the city line you first dial '8'. On incoming calls to us we can also be reached by those who know the addit onal letters to add such K-2 or K-4. The VCh is basically a four number system but goes from switchboard to switchboard between towns and it is considered to be secure to use.

CMEA — Warsaw Pact — "Tsk" — Foreign Section

71. G: Here is an economic question. Does the committee called the Council of Economic Mutual Assistance have a relationship to the Warsaw Pact? S: Of course it does. It controls and coordinates everything. The Warsaw Pact is concerned with armaments, equipment, training, and military aid. G: Do you know who is in charge of this committee? S: All this goes through the Foreign Section of the Central Committee which has to do with the countries of Peoples' Democracies. If it's a military matter then it would go through the Tenth Directorate of the Ministry of Defense. The Chief of Staff has a deputy who is concerned only with these matters. G: Who is the commander of the Tenth Directorate? S: He is a general of the army and a former commander of the Transcaucasian Military district.

72. G: We're worried about your time now and we can leave these other things until tonight when we meet again. The prominent person who will meet you tonight will come here. He will come after

we have met and he will visit you for half an hour or so. S: I will be back here at 2100 hours then. Then I will meet the man, and when shall I see the queen (jokingly)? If I were in the USA, I would ask to meet KENNEDY. J: The queen happens to be in Italy at the moment. S: I know. I'm joking.

73. H: Ask him if he will have time to take a few practice films before this evening. S: Yes, I can do this, just for practice. G: Load it yourself to show that you know how and take it with you. H: Then we can develop it tomorrow and show him the results tomorrow evening. S: Now with respect to [redacted], you will tell him what I need. G: Yes, I have already translated the items into English and have it typed. You keep this list since it is your control list which was given to you by the MGB man in his own hand. S: Thank you. I will take this. I will leave all other materials except the camera. I will see WYNNE right away, then rest a little and go to the Consulate at 1700 hours. I will return here at 2100 hours. I may be five or ten minutes late, but no more. G: Pick up your money; you may take it with you. We'll see you later. S: Thank you. (Subject departed at 1440 hours on 3 May 1961.)

[redacted]

(20)

fl4

7. S: Let me report to you. The deputy to the KGB RESIDENT in London is KARPEKOV. He is the First Secretary. If I could only stay here a little longer I could probably dig out a little more, and probably something about the agent net here. G: You know, now that you have been so well recommended at the embassy, the less you go there for unnecessary reasons, the better. S: They wrote up that the delegation here worked very well, that we did not annoy the embassy or make any demands on them, and that we did everything according to plan. I found out from conversations with GENERALOV that the deputy RESIDENT of the KGB is KARPEKOV.

(8) S: In my opinion, since you have already exposed KGB persons here, it would be a good idea to push this further, but don't bother the GRU. You will know all about them even more in the future, but don't touch them. Of course, you must take protective measures. This is so that no repercussions will fall back on us through any action. But press against the KGB. Make it so tough that the RESIDENT will be removed. This will upset their activities considerably and before new people can arrive here and become oriented, they will lose a great deal. G: I understand, and the GRU should remain in a favorable position. S: That's right, but of course keep them harmless.

(9) G: By the way, I have a request of you. GENERALOV told me that at the airport the British weigh our baggage and that we must pay personally for all excess weight over twenty kilograms. We don't have any money. G: How can this be if this is a Soviet plane? H: The AEROFLOT do not have their own representatives here and the luggage is weighed by BEA. If there is excess luggage weight, they will charge since they have to do this according to their rules. We will see what we can do.

(10) (Note: A few minutes later H returned with Sir Richard WHITE who was introduced to everyone in the room. Sir WHITE then addressed Subject as follows.) WHITE: Well, Colonel, the message I have to deliver to you is from Lord MOUNTBATTEN, the chief of the Defense Department of England. Will you translate this for me? First, he regrets very much that he cannot see you personally. He asked me to relay this message to you. I have been shown the oath of allegiance which you have made for the governments of Great Britain and the United States. I am filled with admiration for the great stand that you have made, and we are mindful of the risks that you are running. I have also had reported to me the information which you have passed on to us. I can only tell you that it would be of the highest value and importance to the Free World.

APPROVED FOR RELEASE
31 MAR 1992

[redacted]

(11) S: My dear Sir (GOSPODIN) I am most grateful to the lord and to yourself for this attention that you are extending to me now. This attention on the part of the lord and yourself is to me an indication of your recognition of me. I place myself under your banners in full consciousness. I have hoped for this for a long time now. I did the best I could to prove my faithfulness, my devotion, and my readiness to fight under your banners until the end of my life. During the course of the past two weeks I have had the good fortune and the possibility to consider many important matters together with the gentlemen present in this room. These matters were of a military-strategic, and political nature. I wish to state to you boldly and honestly that I still have sufficient strength and health and sufficient training of both a theoretical and practical nature in order to give meaning to my new missions now and to execute them in the best manner possible for our Free World.

(12) S: I wish to assure the lord and yourself that very little time will pass before you will recognize me still further and even have an affection for me. Just recently I also had the opportunity to discuss all of the missions which are placed before me now and in the immediate future. I have also recorded all of the possibilities (accessibility) that I have. Here I was told in a very well thought-out manner, very correct and scientifically, about a group of categories of work both in an intelligence sense and in a political sense concerning the problems before us. I am sure that I will fulfill these missions qualitetively as a soldier should do. I swear to you as representatives of your governments that I will accomplish this. I would also like to add and to express the great desire which I have carried in my soul and which I carry now - I even thought about this in Moscow - and that is to swear my fealty to my Queen Elizabeth II and to the President of the United States, Mr. KENNEDY, whom I am serving as their soldier. Although unfortunately due to circumstances, this is not possible now, I hope that in the future I will be blessed by this fortune personally by the Queen.

(13) WHITE: Yes, well, I would like to reply to that. First, now that Col. (Subject's true name) is going back to Russia, I beg that he proceed with caution in view of the great risk. But I want him to know that should the time come when he must leave Russia and make his home in the Western world, then the obligations that we undoubtedly have towards him will be firmly and clearly fulfilled. S: This is all clear to me and I thank you. I would like to add two more words, if you will permit me. I request that you would convey my gratitude to the lord, my gratitude for his attention and I would like to thank you again for your attention. Please fulfill my request that the lord at some convenient moment state to her Majesty, the Queen, that her forces have been increased by one member - this colonel who is located in Moscow in the Soviet General Staff and who is fulfilling special assignments but actually is a colonel in her Majesty's service. Furthermore (please say that) I will serve exactly as instructed and that I'm in very competent hands. WHITE: Of that I feel sure. To meet you has been delightful. (Note: Wine is served for a toast.)

14. WHITE: You have had many many hours together to make this possible. Well now, we shall all drink to the colonel's health. S: Thank you for your attention and thank you for having brought me this very good fortune. WHITE: You understand my English a little, do you? S: I know English, but as one says, "fifty-fifty", or less. You know I was in Turkey and I was assistant attache. (To G:) How do you say "acting intelligence chief?" After this I had no opportunity to improve my English. I did not have practice. But I promise also in future I improve. (Note: All the preceding is said in English by Subject.) WHITE: Now that you're a colonel in the United States Army, I think that this will be necessary. H: You will also have to learn American. WHITE: I can see that you have plenty of stamina to work so intensively and still be on your feet. S: Yes, we have worked a great deal and I also had this delegation to take care of, with trips to make. We often worked until two o'clock in the morning. That's alright since we had important matters to consider, and these matters were more important than worrying about one's health.

15. S: I would like the lord and Sir WHITE and also my controlling case officers who are concerned about me and who will be receiving materials from me in the future - I wish all of you to know that I will serve to the very end in an honest, faithful manner and will be resolute to the end. That is my character and I am confident of my power to do so. WHITE: That is the impression that we have, and we are strongly convinced of this. S: Thank you. I will attempt to justify your faith. WHITE: I think that you have conveyed your desires very clearly to us and I think that we understand this clearly and entirely. S: It is very pleasant for me to hear these words and as a soldier I receive them willingly. WHITE: Now then, if you will excuse me, I think I will leave you to your work. The very best of luck to you in the accomplishment of your missions. My very best regards to you gentlemen. (Note: Sir WHITE was escorted out by H.)

16. S: Did I say everything properly? G: Yes, you did very well. S: Do you think he was satisfied with me? G: Yes, you did well. You didn't overdo it. (H returns.) G: Our friend is anxious to know what impressions Sir WHITE has of him. H: Oh, very good indeed. S: I tried to say everything honestly and briefly. G: That was good and I feel sure that Lord MOUNTBATTEN will tell her Majesty about you. S: This obligates me even more to work hard. By the way, Lord MOUNTBATTEN is the uncle of Prince PHILLIP and was not his mother Russian? H: He came from the Greek Royal House, but they were inter-married with the Russian Royal family and the Queen's grandmother was a cousin of the Czar.

Mil Vehs Reg Numbers

17. S: Well, shall we get down to work? G: Fine. I have some questions here which you may or may not know the answers to. First of all, do you happen to know of the military number system for Soviet military vehicles? S: First of all, all military vehicles with the exception of command vehicles are all painted a khaki color. All military vehicles have a letter designation which is keyed to cities, or garrisons if they are not in a city. This is to permit the Chief Directorate of Highway Control, namely the militia, to ascertain ata glance to what military unit the vehicle belongs. I do not know what the specifics are for each unit. On the right hand side of the cab, away from the driver, is a red star also signifying that this is a military vehicle.

18. S: The numbers within a garrison are issued in sequence and traffic control officers whose business it is to know can tell at once by the number which specific unit the vehicle belongs to. With respect to civilian vehicles used for intelligence purposes, I have already told you how the numbers run. G: What would the letter "U" designate? S: That is an alphabetical letter only for a numerical sequence. But others like "M" would be for Moscow, "T" for Tula, etc. KGB and MVD vehicles have a zero somewhere in the numerical sequence, either before of after. SEROV has two zeros, and then two more digits. However, our operational cars would be entirely normal. These are only for KGB, MVD and GRU official purposes. The PVO also have their own numerical sequences.

VIP a/c RR Car Limousines

19. G: Do VARENTSOV, MOSKALENKO, and ZHUKOV have their own private airplanes assigned to them ? S: Yes, they do. VARENTSOV also has his own railroad car. Two conductors service it and sometimes he takes the wife and family in order to save carfare. G: What kind of planes are they assigned? S: They get IL-14s, and KHRUSHCHEV has an IL-18 equipped with an office. G: Where are they stationed usually? S: Either at the airport off the Leningradskiy Shosse or the Vnukovo Airport. They are not at the Sharabetevo Airport, although near Sharabetevo, five kilometers away there is a civilian airport for internal travel. G: Who services these aircraft? S: It is under the command of the chief of aviation and specifically under his deputy for technical maintenance services. This is of course under the overall control of the Soviet Air Force. For the aircraft given to civilian chiefs of the Praesidium there is a General Mayor who is in charge. A full colonel is the personal pilot for KHRUSHCHEV. He has a million flying hours. (Jokingly) He has a great number of hours. We call them millionaires.

Space Cmte.

20. G: Did you ever hear of an organization called the Interdepartmental Committee for Interplanetary Communications? S: There is nothing by that name, and I haven't heard of it. G: Possibly this has something to do with your

Ministerstvo
Srednego
Mashinostoyeniya

Cosmonauts. S: This would concern NEDELIN and MOSKALENKO. There is some training school where space fliers are trained and subjected to all kinds of tests. At Monino there is an air force training base. It is a command school. It is in the direction of Naglinsk. The academy has been greatly reduced in size. The engineering aviation school in. Zhukovskogo is still on Leningradskiy Shosse. G: So all of these experimental flights such as the one by GAGARIN are really under military jurisdiction and have a military purpose. S: Of course they do, primarily for photography. It would be absurd to say that GAGARIN was not given automatic photography to control.

21. G: How about the Ministry of Middle Machine/Construction? S: That is exactly what it is called. G: Does it not have a connection with rocket construction? S: Yes, it does. This is its cover name for civilian purposes and international purposes. But actually they are building rockets. G: Who is in charge of this committee? S: This is under the Council of Ministers of the USSR. G: Where is it located? S: It is in one of the buildings on the Kitayskiy Pereulok going toward the Dzerzhinskiy Academy and their polyclinic is next door to my house.

22. G: Remember you mentioned a friend of yours whom you had helped quite often, a young officer who once had a minor fire at an artillery dump? S: Yes, that was Captain SKLYAROV - near Mozhaysk. G: Is this about 120 kilometers west of Moscow? S: I would say it's a little nearer. There is an enormous artillery base there. His name is Yevgeniy Mikhaylovich. G: Is it closer than Borodino? S: No, it's further from Moscow. G: Somewhere south of the highway, not far from Borodino there is a huge military installation. Do you know what it is? Or could it possibly be this artillery base? S: The artillery base is enormous and it is called a Class One base. There is even a railroad that services it. This Captain is stationed there now. He is a transportation officer; he is a tank officer. G: We believe it has been there since 1955. S: It is an old base which has been expanded. It is under GAU, under ZHDANOV.

23. G: By chance are you ever in a position to obtain first order survey data? S: That is a very specialized service. Although it is large and also has certain civilian components, the material is very closely held. In my studies of rocketry, abstract figures were used. All basic triangulation data is tightly held. They are partially under the Ministry of Geology and Protection of Resources of the USSR. This ministry is located on Bolshaya Gruzinskaya Street across from the Zoological Gardens. They also have a topographical working section. G: With respect to this work who is responsible

for data needed by MOSKALENKO? S: MOSKALENKO has his own unit for this, but this ministry cooperates with them. They provide MOSKALENKO withmuch basic data, even though he has his own unit. They also provide weather charts and information and are responsible for all such data throughout the interior of the USSR.

24. G: In February 1960 Marshal KONEV while speaking to the Warsaw Pact Defense Ministers in Moscow said that though the ICBM has been developed, the first country to develop an anti-ballistic missile will enjoy a great strategic advantage. Have you ever heard any discussion of this theme in VOYENNAYA MYSL or any other military circles? S: In the first place whatever KONEV said could only be at the direction of KHRUSHCHEV. Even when MALINOVSKIY says anything it is at KHRUSHCHEV's direction. No marshal can express his own views. On occasion, when necessary, a military person can make a strictly technical statement. But if one word of politics is involved then his statement will have beenwritten out for him word for word.

25. G: Have you ever heard of DOROKHOV who is in charge of this program? S: Yes, I have heard the name, and I think that he is the one who received a decoration of Hero of Socialist Labor four times. I will check on this. It seems that he was one of many scientists who are little heard of who live very well but are under very strict surveillance.

26. G: Did you ever heard of a place called Saryy-Shagan near Lake Balkhash which is engaged in atomic work? S: I did not hear specifically of Saryy-Shagan but I have heard that at Lake Balkhash they are working on fissionable atomic materials. Huge quantities of water are needed for this. There is quite an installation there. G: From whom did you hear this? S: I heard this from many sources, even on occasion in lectures which referred to this place. It's hard for me to pinpoint a specific source, but even GAPANOVICH told me about this since he had served in the Far East. He said that there are areas in the Far East and Central Asia which are remarkably suited for such work and that they are very easily concealed there. These places are hard to destroy unless one knows their exact location.

27 G: What did KHRUSHCHEV infer when he said in early 1960 that new fantastic weapons had been developed which are more dangerous than the ICBM? S: He had in mind that he had given instructions to develop a new rocket fuel based on the fission of atomic energy for its propulsion. They are working on this now, but in addition to the atomic energy fuel they are also working to develop an extremely high calorific fuel. Of those that I have already given you, you will notice that Boron is one of the ingredients. But they are working intensively with huge monetary allocations to develop an atomic energy fuel.

[redacted]

#14

(28) G: Have you ever heard that in your agent net or the KGB agent net there are highly valuable American, British or Canadian agents? S: I know definitely that in the hands of the Soviet Strategic Intelligence agent net they have American, English, French and German agents. I know this like I know two and two is four. It is another matter to estimate the value. For example, in Turkey even though some agent candidates had very little operational capabilities, still the order was for them to be recruited. No one expected a top-ranking general to be recruited. G: This is all GRU? S: Yes. G: How about the KGB? S: Of course they have (them). Not only am I sure, but I will put my head on this because the KGB borrowed money from me from my ops funds to pay their agents. The illegals also have their own network. They don't use the people native to that country necessarily but also use people brought in from third countries.

(29) S: Very soon I will give you a complete list of operating agents particularly in Ceylon. G: We are not going to touch them. S: Suppose I don't come over to you for two years? G: If taking action against them would in any way endanger your security during this period of two years, then I would say we would not take action until you come out. S: I understand. After I am out you can roll them all up. G: And you can help us. S: If you could isolate one agent and under the proper legend pick him up, even though his records will show some tieback to me, I could still get by with this. But if two or more were picked up then I would really have had it. G: In general, whenever we decide to act we would only do so after consultation with you, and you can give us the proper guidance.

30. S: Let me give you a quick resume. Do not touch anyone in India now. They are not active. They are on conservation. They should simply be noted and surveilled. They are all being paid. They receive periodic instruction and they have equipment such as radio sets. From time to time their radios are checked technically. In Pakistan the agent net is insignificant. But there is one agent who has been giving information about calculating machines. Ceylon, however, is an active area. It should be shut off. G: As I said before, we will take no action without prior consultation with you.

31. H: In this connection I would like to make a valid point so he will understand. Earlier he mentioned that someone was given twenty-five years for espionage. I want to emphasize with him that we have known about this case for a long time, but did not take action deliberately because we wanted to protect someone. It was only after it was no longer necessary toprotect someone that we took action against that spy. G: That's an excellent point. I will explain that to him. S: GENERALOV told me about this case. He also said that it was

[redacted]

difficult to work in London and that there is no demonstrative type of surveillance, that there is very good covert surveillance. They particularly watch the man who is meeting with our people and then they try to double him back against us.

32. S: Let me finish regarding Ceylon. The agent produces American manuals on military data. He is a corporal. Promote the corporal, would be my suggestion, but transfer him to another job. Let him have a higher official position and more money as if this is an acknowledgement of his good work, but at the same time cut off his accessibility to important materials. This variation could work as a form of isolation. H: This would presuppose that we could deal directly with the government of Ceylon in order to effect this and this we would not do. S: However, valuable American information is leaking out. G: Nevertheless we cannot trust the Ceylon government in a matter of this kind. There are too many unreliable elements there. S: Yes, there are quite a few Leftists there. But at least you can stop sending valuable American publications and data to Ceylon. Let him sit there. To hell with him, but don't give him any new data.

33. G: Let me ask you something about codes and ciphers. Possibly you may not know the answers to these questions. First of all, who prepares and is in charge of the codes, that is, from the viewpoint of command responsibility and distribution? S: First of all, codes are prepared by cryptographic units which are Top Secret. Highly trained scientists, that is, mathematicians sit there. G: To whom is this subordinate? S: This is subordinate to the Academy of Sciences. First of all the Academy of Sciences has the most intensive intelligence research, but in addition to this they have a special service consisting of mathematicians who use electronic machines. This is done to avoid any possible repetition of cycles of numbers.

34. S: With respect to military usage, those codes are under the direct control of the Ministry of Defense and the General Staff. A specific deputy of the General Staff is personally responsible for this. He is concerned with this scientific section as well as with all codes and he is the immediate chief of the Eighth Directorate of the General Staff. He is a general leytenant. G: This is at the Ministry of Defense level? S: Yes, it is. This conglomeration has under it the mathematical section of the Academy of Sciences. They also have under them the training of code clerks and apparatus of all kinds, and under it they have their Eighth Directorate sub-sections which deal with codes like in our Second Chief Directorate. Colonel LEBEDEV is in charge of cosmo intelligence decoding. He is the one who is sitting in the building on Tankovskiy Proyezd. Of course the brain of this who computes the codes has absolutely no connection with designating who is going to use it. This is all assigned in the military section.

Codes

35. S: They even have short-cut codes for our own cryptos. For example, my name OLENIEV, and names like KARPOV, KARLOV, can all be coded in five numbers. Incidentally, I just remembered that RUBENKO's crypto is ENVER.

Acad Sciences

36. G: Who does this for the KGB? S: The KGB also has a cryptographic service and they also get the basic material from this brain trust of mathematicians in the Academy of Sciences. Of course, they can take this material and work it over to suit their own cryptographic purposes. G: Who provides the security measures, and protects these mathematicians? S: The same ones who protect the engineers and scientists who work on rockets, special KGB units such as the OMSDON. No one can enter their area at the Academy. In the past they were even paid for doing secret work but now all pay for secret work has been eliminated.

CH Sect

Ciphers

37. G: Do you know anything about the methods or principles of how they prepare ciphers? S: No, I don't. G: Of course they also have codes as well as ciphers. S: That's right. SEROV has his own code and directorate chiefs have their own codes. Incidentally, the KGB also has an Eighth Section. That number is the indicator for all code and cipher work.

38. G: Where is your GRU radio station located? Is it on the premises where the offices are? S: It's like this. We have our own GRU stations just outside of Moscow. These are the OSNAZY. Some are fixed; there are buildings of a permanent nature, etc. We also have mobile stations with the equipment mounted on trucks. A regular courier service goes to GRU headquarters from these stations.

39. S: The station that handles traffic from illegals on a continuing basis, however, is located right on the fifth floor of the GRU headquarters. This room is located just near where SOKILOV has his office. I even remember seeing the radio station when I was the duty officer. The duty officer usually checks safes in open areas to be sure they are locked and also checks sealed doors which are supposed to be locked.

40. G: Who is in charge of normal communications between your GRU headquarters and your REZIDENTURAs abroad? S: These communications are handled by the OSNAZY which are exclusively subordinated to GRU. These are all out of town. G: How about the KGB? S: They have their own OSNAZY, also out of town, but they may also have a special station atthe Dzerzhinskaya Ploshchad' as we do for illegals.

[redacted]

#14

41. Q: Who handles the mechanics for transmitting a message? For example, suppose a priority message arrived at your OSNAZ for BERKHEEV. How would it get to him? S: The OSNAZ would notify the Eighth Section in clear text on a high frequency telephone line which goes directly to the Eighth Section. Of course this line cannot be intercepted, that is, monitored. Another method used is to transmit numerical groups from the receiving station directly to the Eighth Section by teletype machines. Then Eighth Section personnel decode the cable and deliver it. Low-level information type cables are decoded at the receiving OSNAZ station. Remember there is no set pattern and these are duplicate methods of transmission. Both methods are considered to be wartime security types of communications. The decoded cable at GRU, is handcarried say, to BERKOV.

42. Q: The KGB presumably operates in similar fashion? S: Of course it does. Q: Does the KGB also engage in radio communications intelligence activity? S: Yes, they do, just as we do. Q: Do you know where this headquarters is? S: No, I do not. But they operate on the same principle that we do and there is an interchange of information.

43. Q: Do you have any other extensive radio station network throughout the USSR since distances are considerable? S: Yes. Every RP has its radio station, but of course their equipment is nowhere near the capacity of the GRU OSNAZ stations near Moscow. Often they act as relay stations and when they get an incoming message say fromthe direction of Iran, the entire coded message is transmitted to Moscow. They do not decode it at the RP. Of course if the message is directed locally, say to the chief of a military district, it would remain there. This commander of intelligence operations in a military district is responsible for conducting intelligence against the country to which the district is adjacent. Q: Do they already have high speed radio transmitters? S: Yes, they have and they also use teletype.

44. Q: With respect to your technical developments for agent r- radios and tradecraft items such as concealment devices and SW, does the GRU do all this themselves or is there a central technical laboratory which may also service the KGB? S: No, the GRU has its own shop and the KGB also has its own, but they do have an interchange of data between them. The better developments may be passed on from onsto the other depending on who developed it. Of course operational details are not given as to who used what in what area. Q: Is this arrangement imposed by order or have they done this voluntarily? S: No, it has been done voluntarily. The coordination has been effected as the result of agreements by high-ranking officials.

[redacted]

45. G: Where is the KGB laboratory? S: I believe that they have their laboratory where they have their VAK, off the Leningradskiy Shosse. G: Do they have anything in Kuchino? S: Yes, they have, but exactly what they have there I don't know. They also have their higher school near the Belorusskiy Vokzal. G: Do you have any idea of the type of activity they have at Kuchino? S: This is a technical radio center. Of course they are under different cover.

46. G: Do you have any very advanced scientific technology which is electronic and which measures certain impulses all over the world? S: In electronics our greatest development has been in computers such as the STRELA. Now I believe they have already developed the STRELA 4. The earlier models were intermediate developmental models. We also have developed devices which operate as vibrating membranes and can reflect sound impulses even from glass. The KGB uses this for their interception work. The GRU does not. We have not used them ourselves but we have been told about them. We have also been told that such devices are possessed by both the Americans and the British.

47. G: Have you ever heard that in other countries, say in England, an electronic device in a box had been concealed somewhere? This device receives some sort of impulses and continuously transmits them back to you. S: Yes, there are such devices. They work automatically. I don't know the principles, but I have heard them referred to as beacons (MAYAKI).

(48) J: Has he ever heard of any technical devices that may have been used against foreign embassies in Moscow? S: Not only have I heard of them, but I have seen them. Many of the types have been copied from your equipment. They have thin membranes about a half centimeter thick which act as a microphone and which can be plastered into a wall. Wires lead out to some transmitter which is monitored. In general, these are copies of instruments which you have installed that have been discovered. G: But they have wires. How about those without wires? S: I have not seen any like that and I don't know about them, although they are probably working on such things. G: However, they definitely plant these devices in foreign embassies in Moscow? S: Yes, absolutely, in every embassy where a potential enemy is located - any which we can penetrate.

(49) S: This brings to mind a point which I want to emphasize. Of the numerous Soviet employees at the American, English and Canadian embassies, all of them report to the KGB. For example, my own aunt, Yelena Yakovlevna SHIVTSOVA had worked for a long time in the Afghan Embassy and she was an informant of

the KGB. She is the sister of my mother and has recently been pensioned. She never wanted to do this. She was working there as a stewardess and a nurse. She hated to do this but she was ordered to under threat and one of her assignments was to make imprints of the safe. Her son, Igor, was ill and they gave him medical attention thereby exerting more control over her. She was a gentle woman who hated this. She had worked at this embassy prior to the war for a long time, and later she was transferred to the Italian embassy. She was always terrified and confided in my mother. We were very concerned because any mishap she might have with the KGB would reflect on us. We were very pleased when she was pensioned two years ago.

50. S: In Turkey we never used local technicians or cleaning personnel, only Russian. But here in Moscow you have large numbers of servant personnel. Every one has a KGB mission to fulfill and must constantly report. Why can't you cut out these people and have your own cleaning women do the work? It is no disgrace to clean up floors for your own people to protect security. But no, you always have to bring in so many personnel and everyone is seeking a crumb of information for which they are paid. Unfortunately, Soviet people need every ruble they can get. There are absolutely no exceptions. Often your kindnesses to certain individuals serves a very bad purpose. How sure can I be about this when I tell you my own aunt was forced to work for the KGB in a foreign embassy?

51. G: With respect to what you have reported I would like a small clarification. Remember when you said that GURYEV flew to the Congo? Who was the source of the information which stated that the USSR had a possible deficiency in uranium and other fissionable materials? S: The one who told me about this was FEDOROV who is now a brigade commander in Germany. We were also told at the General Staff that the Congo is rich in uranium ore and that one of our first missions with respect to the Congo was to make arrangements for obtaining uranium ore. When GURYEV returned he told me about this for two hours while we were drinking wine. He said that KASAVUBU asked them to leave and not to interfere. Even Soviet doctors were pulled out of the Congo, and later the embassy was closed.

52. S: By the way, are your convinced about what I told you regarding Soviet employees in your embassies? G: Of course we are. S: All you need to do is compare the number of Soviet employees in your embassies and the number of your people in Soviet embassies. G: We will report all this and how our governments will act is their business. S: I have told you facts of life. Incidentally, my aunt's name had been RICHTER at first since her first husband was an Ossetian whose name was Boris RICHTER. The name is German. He divorced

my aunt, remarried, and is now living in Rostov. My cousin, Igor, was his son and he died after his illness in 1955. When she came to Moscow and was such a good housekeeper she was recommended for a job at the Afghan Embassy on Vorovskogo Street. She was good-looking at that time. She worked there for twelve years and she was the girlfriend of YUSNIS, an Afghan official from the Afghanistan court. Later she married SHIVTSOV, a prominent physician.

China Nuclear FW.

53. G: Remember you mentioned that possibly you could get uranium from China? What is the Chinese reaction to this? S: I know that at first we had given them all kinds of basic equipment for atomic research, various reactors, etc. Possibly they do supply us with some uranium ore, I don't know, but it may have been they want to keep all this for themselves. In addition, their ores are not so rich. It would not be economical to haul low-grade ore such a great distance. Our best supplies are in Czechoslovakia and in the DDR.

Central Artillery Design Bureau FW. Chief of Intelligence Service ? M.

54. G: Do you know where in Moscow the Central Artillery Design Bureau is located? S: Yes, I do. It is on Khoroshovskoye Shosse, opposite the Hippodrome and the Votkinskaya Hospital. There is a triangle there. This office was previously VARENNIKOV's. Now it is under MOSKALENKO. The Chief is General Mayor BEREZIN, but he, of course, is not an [illegible] intelligence officer. A Colonel ZARAMASHOV (phonetic) is chief of personnel there. BEREZIN is slated to be retired shortly. There are a number of new buildings there which are fenced in. Let me show you this on the Moscow map. G: Let me mark this as number 25 on the map and then we can record it.

FPN(4)

55. G: With respectto field post numbers, some of the numbers, we noticed, have four digits. S: I don't know what they are or what they signify.

K. 25 CIW Kamensk.

56. G: In November 1959 KHRUSHCHEV was bragging, as usual, and told journalists he visited a factory where 250 rockets came off the assembly line in one year. Do you know which factory this was? S: If these rockets were of the types LUNA or MARS, then it is possible, but this would not be true for guided missiles. Possibly only the hulls were produced, but this could never be completed guided missiles.

Medium Guided Dnepropetrovsk FW. Navy's names?

57. G: You mentioned that with BEREZIN's death there was mourning in the city of Dnepropetrovsk. S: This is because quite a number of prominent scientists and a lot of the personnel of the testing crews had come from Dnepropetrovsk. When the accident occurred and these people were killed that did not mean that the whole city went into mourning, but just that there were many individuals from Dnepropetrovsk who had perished in the explosion. G: This

would indicate that there must be some sort of installation for manufacturing rockets in Dnepropetrovsk.

58. Q: With respect to rail transportation of rockets, you said that this has all been worked out. How is it done? S: They use standard freight cars, but they have different sizes. It can be two, three, or four axle freight cars. They are not specially equipped, but are merely improvised to haul the various sizes of rockets in accordance with the loading data for truck transportation which I gave you.

59. Q: How many test firings of missiles are necessary in order to assess a missile's accuracy? S: When a rocket is prepared for testing and is actually fired, the data is taken down and is the basis for establishing its firing table. All deviations in the impact area are registered. Only after hundreds of rockets are fired and they fall within allowable deviations, are the firing tables exactly established. I cannot say how many test rockets are required, but dozens and dozens are fired before a rocket is accepted for production. This is also done under varying conditions, particularly at different temperatures. The main thing is that firing tables are established only on the basis of actual firing, not on theoretical data.

60. Q: Why was NEDELIN selected for the post of rocket commander rather than VARENTSOV? S: I have already told you that this was because VARENTSOV was unable to establish good personal relations with the Minister (of Defense), the chief of the General Staff, and with the chief of Ground Forces. VARENTSOV is a very good administrator, but he does not have ahigher education, that is, military. This was also a consideration. VARENTSOV is a little hotheaded. He wrote this letter to KHRUSHCHEV and it got into the hands of the Minister of Defense. Therefore he made a lot of enemies.

61. Q: What part did NEDELIN play in the missile program before the date of his appointment as chief of the rocket command? S: Let me review NEDELIN's former service. At one time NEDELIN was the chief of GAU where ZHDANOV now sits. Then they appointed him to replace VORONOV as the chief of artillery of (ground forces of) the Soviet Army which is now VARENTSOV's position. Then when YAKOVLEV was jailed I remember that VARENTSOV was summoned to visit NEDELIN. I was personally assigned a car to pick up VARENTSOV and drive him to NEDELIN. VARENTSOV stayed at my house that night, and I also met NEDELIN. NEDELIN told VARENTSOV secretly what had happened to YAKOVLEV. He also spoke of General Polk. VOLKOVYSKENKO who was YAKOVLEV's deputy. Both were jailed. YAKOVLEV's wife became insane. His son, a lieutenant, was

dismissed from the army. Later YAKOVLEV was rehabilitated and his son was readmitted to the army, but the wife did not get well. YAKOVLEV was assigned as the deputy to BIRYUZOV, the commander of the PVO of the country, and he will shortly retire. VOLKOVYSSKIY was also rehabilitated and he was appointed as the commander of the Higher Artillery School at Voronezh. NEDELIN then made VARENTSOV chief of GAU and named himself as the chief of the Soviet Army Ground Forces Artillery. As soon as the huge impetus for rockets developed, NEDELIN went as chief of the rocket command and VARENTSOV was made the chief of artillery of the Soviet Army Ground Forces. The GAU supports the rocket artillery as well as the conventional artillery. Each commander wants to subordinate GAU to himself. But that is impossible. Otherwise two GAUs would have to be formed.

62. S: The death of NEDELIN should be exploited by you in confronting KHRUSHCHEV particularly at a time of political expediency because he stresses how truthful he is. It would be very embarrassing for him. All you need to say is, "If you want us to believe you, why did you say NEDELIN died in an aircraft accident instead of in a rocket explosion? What difference does it make? We are sorry to see a highly respected marshal die, but why do you, in the name of the government and the Presidium, lie to the world as well as to your own people?" Similarly, you can expose the Peoples' Friendship University by citing that the prorector there is YERZIN whom you know to be a prominent KGB officer. Why is a known KGB RESIDENT who had been in India and in Turkey assigned as the Prorector of this university?

63. G: Have you ever heard of a Gen. Pol, V.F. TOLUPKO? S: I think the name is garbled. I know all army generals and all colonel generals, but not all lieutenant generals.

64. G: Do you know Maj. Gen. GAYDUKOV? S: GAYDUKOV? Yes, I do. G: How about VASILENKO? S: Of course I know him. G: What are they doing now? S: I don't know what GAYDUKOV is doing but VASILENKO is a friend of mine and is the chief of a faculty at the Dzerzhinskiy Artillery Academy. He was formerly under VARENTSOV as an artillery commander in the First Ukrainian Front. He is the one who helped me get SKLYAREV transferred. He is there now and I have his phone number. It is 401. Write down the academy number. The index is K 68, and then his extension is 401. Incidentally, I just remembered that a relative of your friend Gen. MANSUROV, a major-general, is the chief of the Rear Services Department of the Dzerzhinskiy Artillery Academy and he is a Hero of the Soviet Union.

65. G: By the way, do you know an engineer colonel by the name of GORBACHEV who wrote an article on ballistic rockets in KRASNAYA ZVEZDA? S: I heard the name, but that is all.

66. G: Do you know a General NAZAROV? He gave a commentary describing rockets during the 1960 November parade. S: Of course I know Gen. Mayor NAZAROV. He lives in my house under me, in number 36. He has been retired and he lives in a DACHA where he has a cow. He has three rooms in his apartment, whereas I have only two.

67. G: I would like to show him the SS-7 photograph again to see if that is what he had previously in mind but I don't want to hint that that is the one we think it is. (Note: H produces a set of seven photographs of rockets taken at the Moscow parade.) G: You see, these were re-photographed from a TV presentation of the parade yesterday. S: On this first photograph they again showed old junk. These are old free rockets with the old-fashioned cradle. All of these are old types of free rockets. (Looking at photograph #2) This is a basic guided rocket, V-75. I notice how the angle of photography is affected by the deliberate placing of television equipment during the parade so that a sharp detailed picture was not possible. (Looking at photograph #3) These are all free rockets. (Referring to both photograph #4 and #5) This is the R-2. (Looking at Photograph #6) This resembles the R-11 somewhat, but I do not think it is the R-11. I would say that this is an intermediate experimental type which has never been adopted, even though it resembles the R-11 (Looking at photograph #7) This is the MARS, a free rocket. G to H: Would you like to show him your pictures or should we continue with ours? H: I'll bring ours tomorrow.

68. S: Let me see..I have already told you about the REZIDENT in Japan who is there under a false name. For the time being I wouldn't touch him. I have just spoken to him. G: Don't worry, we won't.

69. G: How is your new GNTK organization tied in with the GOSPLAN, that is, what cover is used to permit funds which pass through your committee to be used for the covert purposes intended? S: No particular cover is needed. Our new committee is under the Council of Ministers. Our chief is a deputy to KHRUSHCHEV. We are very closely tied in with the GOSPLAN. The recommendations of the committee are very influential in the planning of individual ministries. We serve as a coordinating body. The GOSPLAN is the heart of the whole overall pattern. G: In other words, you would recommend what is necessary for the country, say in metallurgical development? S: Yes, of course. G: And

economic planning

you recommend what is needed for military purposes as well as civilian purposes? S: Of course, since civilian factories must execute all military requirements.

Atomics for civil purposes

70. G: Did you hear from any source how the development of atomic energy from fissionable materials is progressing? S: I understand what you mean, and they are preparing such materials. G: There have been rumors that there are great deficiencies in the program and that it is falling far behind what has been planned. S: I believe those rumors are absolutely correct. I cannot give you specific instances but there are rumors that there have been many mishaps and test failures.

71. G: Can you give a rough estimate of the proportion of atomic energy research that is going for war purposes as contrasted to civilian purposes? S: Atomic energy research for scientific purposes is of an insignificant percentage. There are a few civilian efforts such as the icebreaker, Lenin, and certain reactors that have been produced, but almost everything is going for war purposes.

W/hs

72. G: I have one last question. This deals with the size of atomic weapons, for example, 5, 50, or 500 kiloton equivalents. S: For rockets, the size of the rocket remains the same but a different size warhead is fastened on. G: To what degree has this been developed? For example, what is the largest charge? S: I know that we have been firing rockets with a 25 kiloton equivalent atomic charge.

EO

73. G: How about atomic missiles carried by aircraft? Have you heard how large they can be? S: Yes, I have heard. Let me see -- on the lower scale there are five and ten kiloton charges up to twenty-five kiloton used by artillery, that is, rockets. An aircraft has an unlimited size bomb. It can carry whatever is manufactured. I have heard of a fifty kiloton aircraft bomb but this is the regular A-bomb, not the hydrogen bomb. The H-bomb has a greater equivalent, but I don't know what it is. What I have heard is that by artillery, including rockets, up to a 25 kiloton equivalent can be fired and that a 50 kiloton equivalent bomb is used by aircraft. H: Let us take a break now and we will change the tape.

FU

74. S: Show me again how to write down the numbers I will get by radio -- the groups of five numbers. G: It is simple, but in order not to get confused, we'll write it this way -- two dots -- then go like this. See? There is nothing to it. The same thing with the next groups -- like this --

five groups. Pencil in the group, then go ahead -- along the entire paper. It will be on for five minutes, so if you make five -- five -- five -- blocks of groups per line, it will be easier for you. S: I know, I know (with a deep sigh). When are we going to work tomorrow?

75. G to H: Well, we have the option of hearing more questions here; let me finish this sheet. I have covered all the asterisked ones in the first batch; the only ones I haven't covered are theones that are not asterisked in the first batch. There were quite a number of them, but they were the least important. H: Let's finish these up. G: Yes, we will. S: Yes, let's go.

Atomic w/h attachment

(76) G: Do you have any idea of what methods they use to fasten the atomic warhead on the rockets? S: This is called the process of STYKOVKI (locking-in) warheads to the rocket. This process has various methods for different rockets. One of the methods is to screw it in slightly, but not all the way around. G: Interrupted screw. S: Then, also, it can be attached by bolts -- (bolted) the bolts pass through the body of the casing (TELO RUBASHKI). Then when the entire process of STYKOVKI is finished, the entire joint is covered by a steel band. This is to prevent any turbulence (ZAVIKHRENIYE) -- to have a smooth surface. Then it is covered by special oil paints. First it is given a prime (ground) coat (GRUNTUYETSIA). This is all done very quickly. This is a very dependable solid method. There have been no cases where the warhead would fly off. This is STYKOVKA -- the warhead is brought up on a carrier, a hoisting mechanism raises it, and the joining is done (STYKUYUT).

Temperature limits w/l fuels

F.U.

L.W. Solid fuel

(77) G: Are there any limitations as to temperature due to locality (MESTNOST')? Suppose something has to be assembled in the far North, are there factors which limit this work? S: Absolutely. Temperature is a big factor. Plus 40 -- minus 40 -- this is a scientific category which has been calculated very exactly. There are climatic conditions when parts must be heated // G: Are there such climatic conditions where it is impossible to heat the parts -- say if it is minus 50°? (50° MINUS) S: Yes, there are conditions up in the far North where it is either very difficult or impossible to handle liquid-fuel rockets. There, they have to use solid fuel.× You can't heat the parts there -- can't heat them through -- and if you use gunpowder it will ignite.

⊗

Correction 20 who said use "tverdoye toplivo". S. generally says "porokhovoy".

78. G: When the inspections (checks) take place of these rockets with atomic warheads, do they have a definite methodical inspection -- say one, two, three inspections of this, inspection of that, etc.? Do they inspect them often? S: I have described all the technical inspections at all the positions. Why is this different? There is no "atomic rocket" as such. There are ordinary rockets with conventional and with atomic warheads. The rocket body undergoes all these inspections through all the testing apparatus. G: Then there are no extra inspections? S: There is a series of rockets that are already inspected -- they are available in case of need and have passed all the inspection. But after the warhead is attached, there definitely will be another inspection. That's because there are certain detonation circuits. G: How often are the atomic warheads inspected? S: There was this man who knows atomic warheads very well. I am sorry that he went to Germany; he should have been assigned to work either in the Academy or the PVO. Anyway, that's beside the point. These atomic warheads are under constant check all the time. The temperature is constantly controlled. They are constantly checking, with the help of indicators, for the amount of (radio-activity) radiation to be certain it does not exceed the safe level. As soon as anything exceeds the norm, it isreported.

79. G: How are they transported -- in any special way? S: They are transported seperately; I have already told you about that. All warhead parts are transported seperately in special carriers. They have their own regulations. G: Super - special! How about the relationship, numerically speaking, between the power of the warhead and its weight? That is, such a weight will be 5 kilotons, such a weight will be 10 kilotons, etc. S: There is such a table. I have given you the ranges, capacities. For each type of warhead there is a table -- at 150-200 kilometers with various types of warheads...

80. G: How about in relation to theweight? S: We have not been given this relationship. I think it has not beendone. You see, there are limits and this also limits the range. G: You see, what I am getting at -- maybe it's a geometrical relationship. For instance, 5 kilotons may weigh 1000 kilograms; ten kiloton may weigh 3000. S: Oh! This they did not give us. G: See what I mean! Not doubling it, but tripling it. S: No, theydid not give us this.

81. G: Generally, how many atomic explosion tests (OPYTOV) were there and what was the proportion of successes and failures? S: This is a good question. You did not detect all the tests. The smaller explosions are done in deep trenches. You may have picked them up as an indication

of a slight earthquake, but these werenot seismic manifestations. You must be made aware that there were many tests (OPYTY), but with very small equivalent charges. After these tests, we would watch what would appear in the press - TASS, for instance - and, with very few exceptions, there was no mention of them. The scientific-experimental work here is shooting forth like a geyser. All this is done in the central part of the Soviet Union, nearer to the Southern Republics. All this about stopping the nuclear tests is just empty talk -- just bluff. KHRUSHCHEV will chase them all out if they stop testing. And why is this still going on? Because there are still many problems which are not solved. But it is done very carefully, on a small scale.

82. G: Shall we show him some pictures -- J: Just a quick run-through to see if there are any who he can reconjure. G: Yes, there's a whole mess of them. S: Anyway, here is what I want you to know --many of the questions which you have asked me, I have put down as part of my assignment for the future. These questions have given me a good orientation as to what you want to know. G: That is exactly right. That is why we asked you, in the hope that you would remember and get the answers.

83. S: Is this the AFANASIEV who is sitting in the English sector? G: No, this one had something to do with Economic Intelligence. He's been fired. But it's the same name, AFANASIEV. S: Oh! Here is my friend -- Mr. CHIZHOV, a Colonel. (V-7) G: What does he do? S: He's the Deputy to the Chief of the 3rd Directorate, under General Major SOKOLOV. He gave me my orientation when I was coming here. He is the one who will hand in my NAVODKA (Report on Subject) so that in the Fall I will go for training to go overseas (PODGOTOVKU).

84. S: By the way, what do you advise? Should I seek being sent abroad or should I continue to work like this? Because actually it takes a while. First, there is the PADGOTOVKA; then the matter of the Visa - you can take quite along while before you issue me a Visa. If I come for two years, to England -- to America -- to Canada -- G: You'll be welcomed! S: There will be no benefit to our work. G: Of course there will be benefits. S: I can give you codes only. I'll bring you the codes and for an hour you will have 10 photographers working and they will photograph everything. G: Listen, you will have military courses. You will know everybody stationed with you -- all the people from Moscow -- you'll know who is arriving. You'll be going on leave and you can find out much in Moscow. And we can meet securely. S: So, you advise me to come? G: Of course. S: Then I will think along these lines. If they

decide on this, then they will give me some kind of "cover". I'll be discharged from the army notionally. I'll probably not come as military but will come as an advisor. But you think this will be good if I come? G: Of course! H: That would be very well. S: Of course I can get you the codes, -- the whole book and you can read all the cables.

85. G: Where do you think they will send you? S: Either England, America, or Canada but only there. G: You'll be able to tell us who does what at the place you are stationed. S: Well, of course, but maybe that is not enough. I think that I have some good possibilities in Moscow. G: But you will be in touch with Moscow all the time and will be able to tell us who is coming and going and also you will have your commanders' days. S: Well, then you have no objection if they send me abroad - if trusted by the Party and Government. I can do quite a bit during my training period -- and really, I would like to get away from "there". They can only send me to England, America, or Canada; I am finished as regard the Far East.

86. S: This is a very familiar person. (V-8) Let it stay here a bit. He is a Strategic Intelligence officer.

87. S: Now this one, even though he put on glasses, this is OSOKIN. (V-9) G: OSOKIN? The one who is in the Bureau of New Technology? S: He has bee laid off. He looks like OSOKIN very much but please make a check. I wouldn't want you to say that I (Subject's true name) have a bad memory and only know how to visit nightclubs and after all, photos are sometimes misleading. G: He says he <u>looks like</u> OSOKIN. J: This is V-9. (Photo checked out to be Peter OSOKIN.)

88. S: Here is an officer of Strategic Intelligence. You've got them lined up in a row today. (V-11)

89. S: Oh! This one graduated from the Academy in 1952. Now he is a Colonel, a Military Attache in Austria. (V-15) G: You are thinking of SHAMOV. This looks like SHAMOV very much, but it isn't. S: No, no, it doesn't just <u>look like</u> him. It is SHAMOV. G: I'll tell you where you made a mistake. SHAMOV finished the Academy earlier. S: Either 1951 or 1952. G: 1951 or 1950, but not in 1952. That's impossible. S: But it does look like him very much, doesn't it. I would have identified him as SHAMOV. Now I am remembering, and I think I'll challenge you on that. He <u>did</u> finish the Academy in 1952. I finished in 1953, and he in 1952. I don't even want to think about the name and patronymic. G: I think his name is Gevril Philipovich SHAMOV. S: I don't know that; I can't remember. G: (Talking quietly) He plays PROFESSNS a little,

drinks. S: Yes, yes, I know it is he. G: You're right about one thing. He did go recently to Austria s Military Attache. J: I don't know; there's no name on the thing. G: I'll tell you something, this man resembles SHAMOV so much that we can say that it is SHAMOV!

90. S: Do you know DUTOV? He's another friend of SHAMOV. S: The name is familiar, but I don't remember now.

91. S: Here is a man who works for KGB. He has only recently arrived here; I shook his hand today. (V-24) He is in England now. G: BRAGIN, Lev BRAGIN. S: Absolutely right -- not too bad with the English language, puts on airs somewhat, very active worker. GENERALOV was complaining to me about him today. BRAGIN has come to join this Technical (TEKHNICHESKUYU GRUPU) Group and he isn't doing anything.

92. S: Oh, hello! KAPALKIN. (V-33) He graduated from the Academy. This is the one who was the Chief of the Direction; he's the one who is working now at the Military-Diplomatic Academy at the BESKIN School for Illegals -- Viktor Vasilievich. He was the Chief of the Direction, was canned and now works at the Academy -- a ladies' man.

93. S: This is the Chief of a Directorate -- General Major MELKISHEV. (V-37) G: This one? S: He looks so young. Will you check it please? Is it MELKISHEV? G: He's Chief of a Directorate? S: The 4th Directorate. He was formerly the Deputy there.

94. S: (Looking at photos) Oh, Oh, here is Colonel LEVIN, the KGB REZIDENT in the GNTK State Committee of Science and Technology. (V-53) G: With you? S: Yes, here's his name and patronymic-- Yevgeniy Il'yich. He's Deputy to GVISHIANI. He was in Austria, or in Germany. I think in Germany. Is this list Germany? I'll ask you to show me this stack tomorrow when I have a fresh mind. There are so many familiar faces -- seems to be almost a block of Intelligence Officers. Here is another very familiar one. Please put it over there.

95. S: Now, this one is definitely an Officer of Strategic Intelligence! (V-55) G: You don't remember who he is? S: It's been a long time since I saw him at the Information Directorate. Perhaps he has gone somewhere.

96. S: Oh, here's GVISHIANI, Dzhermen Mikhailovich. He's married to KOSYGIN's daughter, my chief. (V-58) This stack I must look at again; this is a very important stack. When I come in fresh tomorrow, I will look at them first thing.

GVTK

97. S: Here's SCHWARTZ. (V-92) He knows English very well. He will be here visiting you on May 9th, with a Hoisting Equipment (POD'EMNOYE OBORUDOVANIYE) Delegation of 7 people. G: GNTK? S: Yes, GNTK (State Committee of Science and Technology). I'm a bit tired now. Let the photos wait a while. I'll go through them all tomorrow.

98. G: You know what -- you are tired now. Why don't you leave now and tomorrow we'll make a fresh start. S: So we have tomorrow, the 4th and then the 5th. On the 6th, I leave here. I won't be going to the Embassy. We are leaving at 11 o'clock. I'll come to say goodbye to you about 10 AM. G: We'll see how things work out. Perhaps we won't be here either. We'll decide this on Friday. Tomorrow we will start about 9 o'clock. S: Can we start earlier? G: Yes, then we won't work as late. S: Why? We have quite a bit. We must do some things more thoroughly, some less, but we should go through the entire plan. G: You won't have any mix-up with your delegation tomorrow night, will you? S: No, no, they're just like my little bunnies (KROLIKI). I got them some cigarettes (5 cartons) at the Embassy yesterday. They were so happy they almost kissed me. I got them for 11 shillings each! They are afraid of me. They know that if I write a bad report of any of them, they'll get it when they go back. I am not worried about security in front of them; they don't mean a thing to me. S: Now, tomorrow morning I am going to call [redacted]. Please instruct him, according to my request, how he should act. The day after tomorrow, I will take him to meet GENERALOV; I'll introduce him. He is not to show any active interest. GENERALOV will call him himself and will invite him. For tomorrow, I ask you to bring the pictures of all those in England. I will show you GENERALOV, and all those. There are many more familiar faces. I'll find them. At least I'll be able to say whether they are in England or not. G: Well, it's up to you. What time do you want? For us it's fine -- 7 or 8 o'clock or 9. S: I was thinking about 6. G: -- 6-- okay. Right after dinner. S: Let me think about this. Can I call you? G: Well, you know yourself we all must gather and a set time is better. If you have any possible difficulties, let's make it 8. S: I don't have difficulties -- what difficulties? G: Well, you'll have dinner and you might sit down to talk to someone. I don't know how things are organized with you. S: Let me think a bit. G: If you come at 8 o'clock, we have 4 hours for working, even 5 hours if necessary. S: Certainly. G: Eight o'clock is a good time. You will have time to dine and do things smoothly. S: Alright, we all meet then; you will set up all the APPARATURA. G: Of course, we will prepare and wrap everything for you to take with you. We will check everything. This whole operation will take 2 hours, then a few questions -- another one half to one hour. Then right away we will show you the photos -- the English ones and the others. Many of them are notimportant. You can shuffle through them in about one half hour. S: Of course, it depends what's in the set. Today's set has held me up because there were many "friends"

of mine there. G: Then on Friday, we can take it easy -- say our farewells -- have a few drinks -- joke -- and clean up odds and ends. S: Then on Friday Saturday morning I don't need to stop in to see you. G: You can, of course -- to say goodbye -- in case you've forgotten something. We'll shake hands. You will only be able to stay about 15 minutes. S: Well, of course, probably no more than 10 or 15 minutes. Okay, now suppose I go to sleep. I'm a bit tired. I had a session with GENERALOV. Alright, goodnight. All: Goodnight! S: I did not lose presence of mind in front of him, did I? I told him everything that was innermost, but tell me as friends for my own future reference -- did I do alright? H: On my word of honor -- I spoke to him afterwards -- on my word of honor! S: As regards the form -- the actual presentation of everything -- was it correct? G: Most correct. H: Very proper, well done. J: The important thing is that it came from the heart. S: Well, goodnight! We'll meet tomorrow at 8 o'clock. G: You didn't forget anything - the pen? S: No. (Subject left at 0005 hours on 4 May 1961.)

(21)

Meeting #15, London, England, 4 May 1961

(Subject arrived at 2010 hours on 4 May 1961 to Room 360, Hotel Mount Royal in London. Upon entering, Subject was shown blown up prints of the experimental shots he had taken previously. KINGSBURY, the photo instructor, was present.)

1. G: Did you take this under electric light? S: No, daylight. H: Ch! Daylight. S: May I? G: How was the lighting? S: It was cloudy and it was the second half of the day. (Repeats in English) second part of the day, about 4 o'clock. KINGSBURY: Approximately at 4 o'clock, yesterday afternoon. G: A surprising shot -- very clear. S: I work under similar conditions which I will photograph later. This is why I don't go into detail. G: You see how clear and exact everything in the written text is. S: Not bad. See how the frame goes evenly all around. G: Now see, here is already a little bit of an overlap. S: Oh yes, I see. I cut it a little bit on this frame. This is what should be watched, and here is the second part. (Subject photographed a pound note.) G: These are the results which can be had if done properly. S: I always believed it could be done. G: We wanted you to know that it was not for a lost cause to use this camera. It is a shame to risk everything and then maybe nothing will come out photographically -- but here is what you can get. You can read every printed word. KINGSBURY: The exposure was just about perfect. G: The amount of light was ideal -- perhaps you can remember the exposure? S: Yes, perhaps I can remember -- and also the distance between the window and the table. G: Now you know from your own experience that the closer you approach the equivalent electric light intensity, the clearer the picture. S: That's how I did it. G: Now, do you want to re-do some more? S: Not really. KINGSBURY: I think he has gotten the idea fairly well. These are very good shots.

2. S: I should have told you about Pakistan and about this business -- (Subject had received a note at the Hotel desk to call a number). G: Did you take care of this matter? S: At the Embassy no one told me anything -- I was not worried. I had to straighten this matter out with you. I made no phone calls to this number, not one. G: Well, who is he? S: I don't know. H: He is from TASS? G: The representative from TASS? H: That's the TASS representative, KONEV. G: He's the representative from the news service. H: No, he's with TASS. This telephone number is the TASS phone, their London number. S: Then why does he live here? G: He does not live here. He called you on the phone. S: Then the number he left was not the Hotel number? I asked you before; this is what was confusing me. G: At a certain time a man called you and wanted to get in touch with you. He left a number for you to call him. S: When we first arrived there was a TASS representative here -- when WYNNE gave the reception. So, maybe he wanted to ask something of the delegation. Tomorrow I will call. H: This is someone from TASS. G: That's all. He just wants you to call back. S: Tomorrow I'll call.

APPROVED FOR RELEASE

31 MAR 1992

[redacted]

3. G: What shall we start with? H: I think there are a few things here we ought to do with photography. G: Maybe we should start with photography, since the photographic expert is here right now. S: Oh yes, then if there are any questions -- One minute, -- May I? H: Yes. (Subject practicing loading the Minox with a new cassette). S: Someone was already snapping this. G: No, not yet. Now, once again -- now, now. S: It is not loaded is it? H: No, no. There's no film in this, is there? K: No. S: In this the position -- when the dots come together, can I load it? G: Of course. You load and unload only when the dots are like that, and only then. S: And if a dot is dislodged, I can't load it then? G: No. It means that the point has not been reached yet for you to load it. You should not load it when it's off center, right? K: You must not. It's possible... G: It's possible, but you may stretch the frames out of position. S: But I won't break it will I? Ask him..... K: No, but the pictures will overlap. G: What if he tried to unload it before the dots are lined up? K: No, that won't matter; it just means that he will have to open up the camera shutter so many times. G: But if he tried to force it open before the dots are lined up.... K: It won't hurt. G: It won't hurt. S: So then, the dots should be lined up (TOCHKA NA TOCHKU). K: In other words, if he wishes to remove the film before taking all the pictures it's quite possible, providing that he operates the camera three times. H: Three times? K: To put the exposed film inside the light-tight container. G: You can unload it when the dots are not lined up. The difference is -- say you are on picture #25, and you want to take out the film. You have to move the frames three times. S: Oh, I see, in order to tear it off. G: No, so that the unexposed film can be wound up in a dark place. Then you can open it. S: I see. I will work only, only on 1/100 of a second and on 30, because 30 centimers is the right distance. K: 0.3 (meters).

4. S: Now tell me under what circumstances there can be breakage? What can get broken and under what conditions? Let him explain that. G: (Translating above to K). K: It needs careful handling -- G: You must handle it gently. What is it that might be forced, or bent, or hurt? K: Well, the mechanism is delicate, and it is possible for it to break any time. G: Yes, but in what manner, in particular? That's what his point is -- what should be avoided? K: There's nothing he can avoid -- nothing. It will just be mechanical failure. G: If it breaks, it can just be because the mechanism is so delicate -- S: But I cannot repair it myself? H: No, we'll give him a reserve camera. S: Does it have to be oiled? K: No, no, no, no. G: Whether he has one or two -- it doesn't make much difference what he carries. H: We can give him one now, and then later another. This one has been overhauled today, so there should be no trouble with it. We will give him the reserve

one at the end of the month. S: Now when I begin to work -- here I am, working -- always is it necessary to lower this when I do this? K: If he doesn't click, it will show a blank, that's all. G: If you don't click, you just let the film frame go by. S: Is this correct? G: No, no. If you click then you open the shutter and let in the light. S: Okay -- Now suppose I have taken ten photos and I have to take out the film quickly. I do this -- one, two, three, four -- and -- K: Take out the film. G: Minimum of three beyond your ten frames. K: Don't use it again, of course. That film is finished. G: Don't use that roll any more. S: No, no, no. That's correct. I won't. I have to clear-up all the questions. Now, to reload -- here I have taken ten pictures, and I have taken them out; the indicator shows this number. In order to reload, do I have to make the clicks up to 50 and line up the dots? K: Right. S: Right now, I can't load it? K: No. S: Point-to-point, Red and Black -- and K: Begin. S: But I can't load it the way it is now, why? G: Because it won't be even. He wants to know what will happen if he loads it like this,. S: What if I'm in a hurry, and don't have time to click it? G: (to K) If you put it after the 14th frame? S: In such position? K: Well, you risk getting overlapping pictures. G: Overlapping? K: Yes. Instead of a space between each photograph, you may have an overlap. G: This is what you are risking. The film may not be in proper position, and you will constantly be getting half of one and half of the other. S: Why? G: Because it is not set up to center the film. S: I see. What if I have to make ten more pictures in a hurry, and I have to take them out -- I start with a zero? K: Yes. S: But you can't start with this position? G: You might, just be chance, hit it right -- by chance. K: Well, George, if he's going to take ten frames of one -- and then ten of another, he may just as well go on on the same film.. G: This is just a theoretical question -- not a practical one. He meant ten at once, and in a half-hour ten again, something like .. S: I'll watch the frames, that's all.

5. K: The frames exposed earlier -- I'd just like some comment on them -- how much light? H: Just a moment. You would like to know about the other film that was done in daylight? K: Yes. G: This is about those which we developed for you before. K: That had about the maximum exposure. In other words, the light was maximum. S: And you could not read anything? Ask them -- when it is a bright day, what am I supposed to do, move the table back? G: Exactly. S: Now it will be summertime; it will be bright -- how does he advise, as an example, if there is a bright sun? G: He wants to know -- if the sun is too bright -- how many meters from the window? K: I can only say that he must remember the light with which he had the most success in the past. G: It will be necessary for you to remember and try to recreate the light with which you had

the most success before. It is very difficult to determine the amount of sunlight. S: But if the light is very bright? G: Then, of course, you would be further away. S: Well, will you be able to read it anyway? G: It will not be very good -- some we'll be able to read, and some not. S: That will not be good. G: I think he's got this in parameters of very bright sunshine. S: That's exactly what I am talking about -- this weather. G: If he says on the darker side of light he'll be better off, maybe in the middle of the room. H: -- Or perhaps, with his back to the window. S: No, there will be shadow. G: Shadow is not so important. K: His own shadow is alright. S: If it's a very bright day? G: On a day when the sun is bright, if you stand with your back to the window there is shadow, yes, but there will be sufficient reflected light. S: Only? G: Yes, because the sun is so bright. It will come out anyway -- and it's better this way than to risk over-exposure. S: It's clear. Anyway, I'll try to pick a happy medium.

6. G: You already have some idea; you've been feeling around. You already know what to avoid, besides, asyou know, the bulb is more dependable. S: No, I'll have nochance to work with the bulb. Work ends at 5 o'clock. I can't take the stuff home with me. The only place I can work is in there behind locked door with the key in my pocket -- only in the daytime -- in daylight. G: You'll have to learn to gauge whether to come closer or stay further back. Anyway, it is easier to hide it quickly because there is no light bulb burning. It's even more secure for a fast "put-away" -- the instrument, under sunlight. He doesn't have to bother to set things up or to measure. S: If I use the bulb -- it is 100 and 60 watts. G: One-half to one meter is 100; one-fourth to one-half meter is 60. S: Alright, it is all clear. The photographs will be good. (K is leaving. Everyone goodbyes him and thanks him.) G: (to H) You have the little cassettes which he might need? H: Yes, I have lots of these things. If I can just remember where they are.

7. S: I have an important announcement, very important. Today, he (SHAPOVALOV) is going to meet his recruited agent as well as other people at the Pakistan Embassy. Of course, he will talk to several people, but he must be watched. He told me today that he has contact with, and wants to recruit, an English Communist.

Permission has been requested from the Center, but so far there is no answer. A British Communist. H: An Englishman-Communist. S: The prospect says he just wants to work. He says he doesn't need money -- his objectives are purely political, but they are "feeding" him a little. If I were going to be here another 10 days or so, I would uncover the entire AGENTURA. I already know about two people through SHAPOVALOV -- the Hindu and the Englishman Communist. Simply surveille them and they can be easily spotted. I heard that the Embassy was very gravely impressed, and has already notified Moscow, about that sentence of 42 years. This is a very severe sentence. I heard today that the wretch who received it is 38 years old. His sentence is 42 years, so he will be 80 years old when he gets his freedom. A very strong impression! The order has come down to the center to work seriously and be very security conscious. H: This is today's order? S: Yes, they informed them (Moscow) yesterday and today a telegram arrived from there with the "security" business. Their mood right now is very "bad". They say that this will discourage people from working with us. S: You have written down the auto number 462 -- his private car. He will be talking to his agent today - actively.

8. G: What else? S: Now, here are the bills for the things which I have bought so that you will know what I'm buying. H: Don't worry about that. S: And I want again to start with WYNNE. G: You don't need these? (bills) S: No, what for? I want to start with WYNNE. Saw WYNNE today. He (WYNNE) is getting certain receipts for us. He is getting us ready for departure and I can sense what his mood is. I am sly; I seem to look at things simply but I understand everything. WYNNE feels right now that I have a good deal of money, that I have been rewarded. He gives me glances and hints, which say that I should "fix him" also. I ask you to have a talk with him - a good talk, a friendly talk. Explain to him that he will be paid well and backed by you and that if he continues to work well with me he will always have enough of everything, even in the future. G&H: Right. You are absolutely right. S: You should tell him like this --"(Subject's true name) is a generous fellow, but you should not take money from him." This is so he won't think that I am greedy.

9. S: You know when he was in Moscow and I tried to talk him into taking the documents out he was afraid; he said it was none of his business. WYNNE was my last chance -- or I would have gone to either your Embassy or to the Americans. I would have been "burned" together with the documents. I don't know whether you would have flown me out or whether I would have lived there.

I had such impulses and intentions. WIMME did not want to do it at first, he was very much against it. He was afraid. Oh, how he was afraid! How I begged him and persuaded him. Of course, he understood that if I met with success, I would get him gold medals! After all, he is a merchant - you must realise this.

10. G: We will take care of him first rate. You said yourself that he was pleased when you saw him. S: Very pleased! But I ask you, please find time tomorrow to call him in and talk to him, before my departure -- so that he will understand. Otherwise, he will think, "Hah, that (Subject's True Name) he begged me so; he was so persuasive." Now he sees that I am sure of myself and that I am spending lots of money - the pounds are just flying here and there. He thinks, "Why doesn't he give me some? What an unscrupulous fellow. In Moscow he talked me into this and now he doesn't want to give me a share. He's greedy, no good". This feeling will lie like a stone inside him and that's the way he will feel when he comes to contact me in the future. Imagine! This should not be. G: It will not be. No. S: He has personal tendencies like that. He is a merchant - a tradesman. He feels, "I have done something and want something in return". If there is some gain from his action - pay him. He is a poor man. I want you to understand this delicate feeling I have of the situation. Perhaps I am not making myself clear. G: You are worrying for nothing. This will not happen. S: Today we had a conversation of this kind. G: He's inquisitive? This is none of his business. S: He is inquisitive and he feels that I have money. And he will say, "What kind of scoundrel are you? You begged me so over there and here you don't want to give me anything. It is no matter that I get mine from them -- from the government. Why don't you share what you got?" This is what I felt. I am sure of it. G: He is satisfied. He is very well reimbursed and feels quite happy. S: Perhaps he understood me to mean, in Moscow, that if he would do this thing, I would "thank" him perhaps, he has such an impression that I promised this to him because I was desperately trying everything. G: He is not offended. Don't worry at all. Don't fret a bit. S: I don't want him to have any bitterness when we say goodbye tomorrow at the airport. "Ahm, you grabbed what you could. You got yours. Now you don't need WIMME". G: No, it won't be like that. No. S: I did not tell you yesterday but I felt it. I am a very sensitive person and I felt it. G: There is no cause for it. S: I swear I am not wrong. I think that I told him in Moscow, "If I have it good, you'll have it good". And now he is wondering why I changed my line. This is a very important matter, especially since I'm going to meet him at the end of May. I ask you to reassure him tomorrow, tell

him that (Subject's true name) is a kind man. G: We will tell him that we have forbidden you to give him money. S: That's it. Tell him that you have forbidden me! H: This is right. S: Tell him, "You will get everything. Work a bit more". And when you tell him to work some more, he will get more steam up; he will make more effort; he will be careful. H: That's absolutely right.

11. S: Here is another detail -- you must know everything. When we were at that night bar, he invited a comrade and two girls, for himself. I had my own (girl). I said to him, "It is embarrassing for me to pay. You give her the money." So I gave him 15 pounds, and he gave it to the girl. Then they were there for some time longer - drinking, eating, fooling around. That was none of my business. He said to me, "I have blown 55 pounds." We had stopped in another restaurant before this. He was giving a broad hint. "All this was for you, I'm a poor man. Why should I spend 55 pounds on you?" This is the way he was hinting today. G: These are all mere details. Don't worry; we'll fix it all up with WYNNE. S: It's my duty to express my opinion. I will be working with this man. This will be a big link. I received this note today (telephone call) and I decided to talk to you right away. Tell him carefully, "(Subject's true name) has asked for some money to "thank you" but we have forbidden him. We want to give it to you ourselves." Tell him, "You'll get what's coming to you. Work well, and you will get rewarded." And I, here and now, promise you that I will work so hard that I will do enough for both WYNNE and for me. It is clear to you what I mean about WYNNE? G: Yes, of course . S: Thank you.

12. H: And just in this connection, I'd like you to tell him that he shouldn't mention to WYNNE this business of meeting with KENNLAND because that would upset him. S: OOOOH! NO! H: Under no circumstances. S: (almost indignantly) Mr. Harold, don't you think I ... H: Yes, yes, I know. S: I wouldn't say a word. G: But a word of caution had to be repeated. S: You are right -- and WYNNE doesn't ask anything.

13. S: So, MERRIMAN comes tomorrow morning at 9:30. GENERALOV doesn't feel at all well. By the way, GENERALOV was in America but he did not do anything. He worked very badly in respect to Intelligence. Are there British photos today? G: Yes, later. S: I was thinking we might work it this way - start with the photos because in about 40minutes I must call my people who are coming back from the Embassy. They are all extremely busy just now. Each one is writing something for the Embassy. I have to spend 30-40 minutes with them at supper because only I can sign the bill. Now, again I ask you, Mr. Harold, when you are talking to WYNNE, remind him to give each one of the delegates, including myself, receipts for 2 pounds, for each day, as we were

advanced. There are 16 days to account for -- that's 32 pounds per person. Eleven days we were here and 5 days in the other cities. Each of them has to account for 32 pounds. If we do not, there is hell to pay. WYNNE knows all this, but remind him again. G: Receipts? S: Receipts, copies of the bills. Only be sure that the bill doesnot show that the price of breakfast is included because according to Soviet regulations you must pay for your food out of the food allowance and you are not to use the housing allowance for both hotel and the food. G: Youare speaking of breakfasts, but that does not appear anywhere. That's included in the room price.

14. S: No, you see, hotel and meals cost each one 4-4½ pounds per day, but the companies pay the difference over 2 pounds per day which we are allotted. G: Oh, so you eat on special orders? S: What do you mean on special orders? G: Not according to the included breakfast menu, but a la carte? S: No, we eat breakfast, and then we eat lunch. G: Ahn, and lunch! S: Lunch - and we don't pay this money. The specialists are so happy! Well, let them be. G: Well, there will be nothing showing; it won't appear. S: Some hotels say "Including Breakfast". H: If they have special breakfast they will put it on the bill separately. S: Special breakfast. That's right. And this must now show up on the bills. All that should be shown is £ Per day and the name of the hotel. G: Can they get separate bills? Can they do that for them? H: I justdon't know how the hotels work. I'll have to find out. G: I think they can do it. If you ask them to split it up -- extra items here and the hotel room charges here. S: WYNNE knows all about this. If you tell him he will take care of it. The bill should say "Hotel Mount Royal -- 11 days. Received for 11 days --£22 ". G: Excuse me, but suppose you paid more than your allowance for breakfast. Can't you say you paid for that by cash? S: They'll say, "You paid cash? That's impossible. The company paid for your food! You only get 30% for everything". Then they'll start withholding again. Oh, they areclever with money there. For a kopeika they will kill a man. This is why I ask this. I explained all this to WYNNE; you just remind him. G: Separate accounts -- room on one, all extras on another. S: We don't need copies of the food bills. G: Yes, but for the hotel they have to separate their bills somehow. H: What happened in the other hotels, when they were at the Midlands? G: What did you do when you were traveling? S: We paid £ 2 per day for the hotel where we lived -- for five days, and 11 days here. G: How about the bills? S: WYNNE has the bills. He collected them. G: And they are correct? S: Correct. G: Ah, they were correctly made out. H: Oh, they are alright? G: Yes. S: Only the Mount Royal? G: Only the Mount Royal. Before departure for the country and after arrival -- or how? S: It should be as it happened. Three nights we spent here, then 8. So that the total would be 11 days, and then the 5 days in the other cities will make it 16. (G translating) H: The bills

for the 5 days were alright. Now you want separate bills for room only for every man, and separate bills for extras. G: You see, he can't pick up the bill alone for £ 160. It has to be £ 32 five times. S: This is a guide for me. It is important to make sure of every detail so that the bookkeeping department will have no bones to pick with me. That's why I ask you for this big assistance.

15. G: Listen, you have about a half hour now. We have a very important program. I suggest the following -- you can look at the pictures another time or later. Tomorrow, we can finish them up. I want to go over the main things. What are we going to cover in order? Operational instructions. What and how things will be done. Then I will explain briefly -- and even in detail -- the main missions which you will be given. S: Can I put them in my pocket? G: You can. How about writing them in Russian. S: Fine, I will. G: Thirdly, there will be some questions and the photographs also. I want to give you some instructions with the one-time pads. When you come back, I'll show you something else. This is something different. The size is different. We won't open them; they are sealed on purpose. S: Even one is not opened? G: No, they have to be like this. S: I understood all this from the instructions. The numerals are bigger, aren't they? G: Yes, much bigger - not quite this large, but almost as large. S: These are the first ones (code), and these the second (decode). G: You write with these (code). S: And I decode with these (HASHKIVAYU). With this I write -- encode. Well, we will write some more later, when I return.

16. G: Since we have about 20 minutes left, I will go over the operational instructions. Then we will review them when you come back. S: Shall I take any notes? H: Perhaps, George, when he returns at 9 o'clock or so, wouldn't it be better to go through this routine then? H: You can only start on that aspect now. G: I was proposing to read this and then review it when he comes back - to make sure he has it cold! S: Tomorrow we will be working very hard. G: On the contrary, I was trying to get as much done today as possible to leave more time for rest and for relaxed review tomorrow. S: Rest! What's (so important) about rest. Rest can be had on the airplane, when I get home, Saturday and Sunday. G: If he's going to stay longer, let's get on the road with this. S: This is a historic room. Someday there will be a memorial plaque here.

17. G: Let us begin with this (radio code and signal plan). Why? I'll tell you. The radio man will be coming to check things. He will come just as you leave. He will wait. When you return, he will have tuned everything up and all will be set. Before that, I want to... S: And then I'll take my instructions sheets. H: Well, let's show him how to do it. S: Perhaps I should talk a bit first, and you listen and check and see how I understand it. Can we do it that way? G: We can. Please go ahead. That's very important.

18. S: At the predesignated time, at the exact hour, I receive my signal -- 163, which will be transmitted for a period of 5 minutes. G: First of all, what is that exact hour? S: This will be at the appointed time. G: What time? You know what time. S: Yes, you told me. Midnight. (POLNOCH') H: Midnight. S: Midnight (laughs). G: Midnight of what day? S: On Saturday and Sunday at midnight. G: For how many Saturdays and Sundays? S: A whole month. At midnight, for a whole month, on Saturday and Sunday. G: From the 1st to the 31st inclusive. If the 31st is a Saturday, and the 1st is a Sunday, the month ends here (Saturday) and a new month starts (Sunday). S: Anyway, it's Saturday and Sunday -- no matter where the month ends. G: It will be repeated and repeated. So, if you listen just once a month, for even a few seconds, you will know if it isn't yours or if there's nothing there. Listen for the numbers that come after 163. The first one if it's higher than 5 -- then it's a dummy. S: Yes, then it's a dummy. If up to 5, and including 5 -- it is mine. Over 5, up to 9 -- not mine. Then after this 5 minute calling period, there will be a long dash, which will sound for 5 seconds. Now, in one place it says 5 seconds, and in another 2 seconds. So on this I had a question. The 5 seconds is what I remember memorized. A long dash which will last 5 seconds. Now,(S mumbling to himself going over the instructions) here, the next example is ... G: No, that's something else. This is the repeat -- when it repeats.. S: Oh, I see. Now that's clear. G: Because when it is repeating, you don't have to wait that long. The repeat is just for checking purposes. S: This long dash is a signal to me for attention because right after the long dash the message (NEPEDAA) will begin. This is clear. Now, I get the first 5 numbers. The first number is the important one for me; the second one is not important; the last three numbers indicate the amount of groups. There can be no more than 100 of these but the number (will correspond)? If the last two numbers are 78, then it will be 78 groups. Correct? G: Right! Absolutely correct. S: After the first five-numbers group, which is by way of an indicator, to show me that this will be "mine" and to tell me how many groups, so that I'll be ready to take them -- the message will begin. It will be repeated with certain intervals -- a number, small pause, number. I only ask that the intervals be a little longer. After this, I get a break (PERERYV), which

will be followed by a repetition of the message. After the repetition, during which I can check and correct everything, I will again get the group -- my call -- and 31, which indicates the end of the message. These two groups -- the first group of 5, and the second group, and, of course, the 31. This number is not part of the group. They are separate. If it indicated 78 I should get 78 groups not counting the first group of 5 and the last. G: Exactly. S: After this -- at the moment I am listening -- as Mr. Joseph advised me, I make dots like this, and dashes like this. Now when I have strained them all out, I begin to write down the numbers, the meanings, according to my control chart -- three dots, dash -- a 3 -- etc, a dot -- 5 -- etc. So now, after this I have written down the numerical meaning, and I have finished all the preparations and have received the numerical message, the groups. Now I begin to decode.

19. G: Alright, let us suppose you received this and at the end you see this. You have written it down ...163. The repetition doesn't matter. Heard's 31. Now, this is not part of a group; you have heard the 163 -- just as an example -- then a pause -- and you have written it down. These group separations meanthere are 33 of them. Now tell me what all this means.

20. S: This, the first group after this, indicates which pad I must use and which line to begin with. G: In what instance is this? S: If I have already worked with it before. G: Just the opposite -- only if it is the first time. It is only given once. If this is the first message -- you have taken it down for the first time -- and this group appears -- only if it is the first time you are receiving it. Of course, if it's a "live" message ... to tell you where to look -- here, there or elsewhere... S: They all have different numbers. G: And they are all 2's (decoding pads) -- you receive on the 2's. S: And on the 1's, I send. G: Yes, you send. Either SW or radio. We are not using any radio right now. S: This is for me for the SW? G: At the moment. It applies to the radio also. Is it clear? S: It's clear. G: So, this is the first message by radio -- live message. S: This first group is to tell me which pad to use. G: The first time! The second message -- telegram -- won't have this! And there'll not be another such number until you switch to another pad.

21. S: How will the second telegram be then? What will this first group, the one after this one, represent? G: This will be the first group. And what is this group? (line indicator) S: Aha! This group then will indicate to me which line I start with. G: Exactly. In the first message you get the number of the book. S: In the very first message; the "live" (BOYEVOY, RABOCHEY) message. G: This, will be the first line. Then it goes on and on and on and ends with the pad number. Here take a look at it. S: Aha! Yes, I understand it now. It must not be touched any more; it is only given for control purposes. G: So, you begin with this number -- the

first actually real message number. S: So in the first telegram, the real group will be the third one, and in the second message, the real group will be the second one. After,this one won't appear.

22. S: Now I ask you, please show me -- as though this page were not there. G: Surely. S: Here is the first page, the first line; and here is the first page which I'll open here. How do you open it? G: With a knife. (G&H showing Subject how to open a one-time pad.) S: I don't open the other ones? They are secret, so it's better that I don't see them. G: That is right - it is so you will not lose them. G: Then you figure it out. You use false subtraction. When you figure it all out, you start to write the numbers you worked out, after this first one. S: And then, according to the amount I get after I subtract -- I'll be (subtracting) all the time -- I'll start to decode the letters, figure out the meaning.

23. G: (Explains to Subject how to transcribe the numbers of the message into the literal text.) S: Tomorrow make me a real message. After all, you won't be standing in front of me to guide me. You will prepare it for me? That's fine. I will assume that I received them and then I'll work. I have a small suggestion. Send me two messages, one will be a "first" and one the "second". Then I will finally understand it all. G: Certainly. This is very important. Once you do this, it will always be easy. S: It will stick in my mind. G: Agreed. You're leaving now? S: I'll have supper and come back. We have another five minutes anyway. You'll give me two problems -- message #1 and message #2. Give me the numbers as though I had already "caught" them. G: A pencil is a good thing to have for this, a pencil and a large piece of paper. S: I will take my notes and these things I will leave here. G: We'll prepare something quickly. S: Two messages. And I'll do what I'm supposed to do -- subtract, etc. I'll go now. G: I won't touch your book because I'm using the coding book for my message that I'm sending you. You won't see anything there in your book but the printed numbers. S: Only be sure that there is some sense to the message I get so that when I compute it from the pad I'll have a logical result. G: Of course. S: I'll try to be as quick as I can. G: Do everything you have to. No one is going to run away. S: These things I'll leave here. I wonder if they have returned from the Embassy. It is probably inconvenient to call from this room. G: No, better from your room.

24. (Subject left for his appointed supper engagement at 2100 hours. Subject returned at 2210 hours.) S: I told my delegation that I am going to sleep and that my phone is disconnected. J: Here are your messages. G: This is your new pad. S: I have received my call number and 27 groups. (Subject examines two coded messages prepared by George and Paul.) (Subject

decodes the messages. Subject says he understands it all and doesn't want to waste time going over all the details but he made several minor errors which were called to his attention. He is given the second message and works on that with George. Again he is told about Number one and Number two pads -- which to use where. Encode on #1, decode on #2, also which frequencies are for Summer and which for Winter.) G: Higher ones are for Summer; the lower ones for Winter. S: Now again, let me time the frequencies on the transistor. (Subject experiments.) S: Anyway, I will always listen on the short wave, not on this one. G: On that one you can hear the news of the day. It is the standard broadcast band.

25. Paul: What I want you to do is to recognize what I have written down here. Just follow it with your eye. G: Can you recognize what that is? He is repeating so you can recognize it. S: I have one question. Let him show me how the multiple dots sound -- the dots that come after my call number, 163. G: (Translating to Paul) We will do it all again completely. S: He's giving me 163. G: Right. S: These are the multiple dots, then the long dash. G: How long is the dash? Paul: About that long -- 3-4-5 seconds. G: S(Working on practice tape) Paul: Write them down, if you can. I'll go slow - I'll give you time. Later you'll forget about this, it will be so simple! (Subject practicing reading signals) Paul: Now let's try the broadcast. (G explains to subject that the beeps won't sound in Moscow like they do here since these are slow speed.) S: That is too fast! G: My dear man, he's making it fast right now because he's just repeating 163. When he begins to send the message he will slow down. (Subject practicing some more.)

26. (During a short break in practicing reading signals, the topic shifts to teeth, undoubtedly.) S: These 5 color samples -- let me have them, a few of each, and my physician in charge will choose. It will be better to have them matched in daylight. (This is in reference to Subject's bridgework-to-be, for which he is being supplied the material from which his dentist will make 5 teeth to replace Subject's defective 5 false teeth.) G: How many altogether do you need? S: Five in all. G: Ah, I found it - it's either this one or that one. (matching colors) H: It's either shade #5 or #6. G: #5 is probably the closest. (Still arguing about the shades of teeth - Subject likes #3.) G: That's white like a baby's. S: If he can't have #3, it must be hard to get. (Finally he is convinced by G & H that he should take shades 4,5, and 6, five of each.)

27. (Now Subject returns to practicing reading radio signals.) G to Paul: Do you want to demonstrate this yet? That will finish the radio review. Paul: When you get this receiver, I will see that you get instructions

[redacted]

with it. G:(Translating to Subject): You'll get complete instructions -- written in Russian -- and a photograph illustrating the set. (Paul explains details of the RR-22. Subject is made to go through the tuning in process, and is shown the differences in the tone and the background noises -- and is told to get used to the one which is better for him.) Paul: Now shall we review the battery charger once more? (Subject reviews the procedure for recharging his battery.) G: Do you have a little secret book where you can put down some information? S: Yes. (Subject is now given a Moscow telephone number to call after his return to signify his secure arrival.) G: Write down -- from a phone booth, 9 o'clock in the evening, Moscow time, 8 May, Monday, and the alternate - on the 9th of May, at the same time. S: PM, not AM, at 2100 hours? H: That's right. G: Call the Number 948973. Three rings, one minute later another three rings. H: This means everything is alright. G: If anything is wrong, then call the same way but ring 5 times - to be certain - repeat five rings.

28. S: All is clear. Now let us go to the next item. G: According to schedule, WYNNE will be in Moscow by the end of May or the beginning of June. S: The beginning of June is not good because the exhibition closes the 4th of June. G: Probably it will be in late May or perhaps it will be on the 1st of June. Anyway, you will meet him at the airport; check to make sure that his baggage has cleared Customs with no trouble. Then you will take him to his hotel. The suitcase which is for you will be left in the car and you will go off with it, after you drop WYNNE off at his hotel. There is no need for him to take it into the hotel. S: No, why carry it around? G: Now let us repeat this again. You don't have to write anything down. S: I'll be meeting WYNNE and I will be carrying my briefcase, where everything of mine will be wrapped up and ready. H: Yes, yes, this point is also included in our plan. G: You willpass to WYNNE the material which you have gathered for us. This will include documents you picked up, undeveloped film, and those documents which you have already. S: Top Secret and Very Important -- if I get some -- and those papers I already have on the Academy, etc. G: If you consider it necessary for some reason to write us a letter in SW fold it up four times and attach it to the material. This is only if it is necessary. If you want to write a letter in plain text, the same thing goes. After WYNNE receives the material from you in the car, he will go into the hotel, wash up, settle down, and then he'll go down to the Embassy as soon as he can and will rid himself of the material. S: The man (in the Embassy) must be alerted as to the time of WYNNE's arrival. H: Yes, this will be done.

[redacted]

#15

29. S: I want to repeat this. I will give the material to WYNNE in the car and I won't leave the car. Where will WYNNE put the material? We have to think this through. WYNNE should have a briefcase or bag. G: WYNNE will carry one of those small traveling bags where one keeps the shaving equipment, the kind one takes along on a plane. He will come off the plane with it. It will be a perfectly innocent item. Then he will take it in the car and will put your material in it. S: He must hang on to it. G: He will take it by hand into the hotel -- then, quick as a shot, he will go on to the Embassy at his earliest opportunity. He will be expected there. He will deliver the documents, which in turn, will be sealed and sent here. If by any chance you have any large documents, which will not fit into WYNNE's small traveling bag, then while in the car there is no reason why he can't open one of his suitcases and shove the stuff in there. S: Yes, he will have his shirts and things in there and it won't be noticed. G: So, you will have a briefcase or a small suitcase. S: Briefcase. G: It depends on the size of what's inside.

30. S: I have something I would like to ask. I don't like the idea of WYNNE walking around the streets, etc. The man who is going to be expecting him, should be somewhere nearby, even if he has to be waiting there a long time. It may take us a while to get through Customs, to get the passport checked. Perhaps he should be waiting for him in the hotel. After all, I'm just going to drop him off near the hotel and leave. I'm not even going to see anyone, not even the clerk on duty. This man must see WYNNE as soon as he gets in. This is my way of looking at it. Perhaps you feel differently, but I feel that WYNNE should not be left holding my material for any length of time. G: He wants a man to meet him. S: The man should be waiting for him at the hotel. H: This will be dangerous. S: It will draw suspicions. G: WYNNE has legal and personal reasons to go to the British Embassy -- to report, to deliver a letter. S: Yes, this is realistic enough. G: So, he will go with his suitcase to the hotel. He has a room in the hotel. Then he will simply go to the Embassy. S: Well, I'll leave the security details for you to work out.

31. G: But here is another important matter. While he is with you in the car, you must arrange with him the time and place of your next meeting with him. S: For this, I'll go to his hotel the next day. H: But you must tell him <u>when</u>. G: Exactly when -- very exactly. It is important that the time is exact, because then WYNNE will know how to arrange his time at the Embassy with the man to whom he will give your material. He will then be able to arrange with this man when he (WYNNE) should pick up the shipment of items which are to be passed to you by WYNNE. If you say to WYNNE, "I'll see you tomorrow

at 6 o'clock in the evening" then when WYNNE meets and talks to the man at the Embassy, he will make arrangements so that he will have the shipment for WYNNE to pick up for you by 5 o'clock the next day. Then WYNNE will get it and bring it to the hotel and give it to you. This is necessary so that WYNNE will not be holding the stuff -- the various purchases -- for two or three days. After all, it may be dangerous. They may search his things. He is a foreigner and those things are done when he is out of his room. S: I understand - very clear. This way he will get the things for me and I'll take them right away. He will not keep them overnight. G: You have to let him know when you will meet him so that everything can be prepared and readied at the Embassy and held under seal for you. S: Completely clear. I will work this out. G: What sort of things might be there? For instance, some more cassettes, perhaps another receiver, some more instructions -- in addition to your purchases.

32. S: Incidentally, let us think about this special receiver. I don't think you should sent it to me just yet. I still have to find a hiding (TAYNIK) place for it. This must be worked out first. Don't send it just yet. G: Yes, it is better not to send too many things at one time. I'm only giving you an explanation why WYNNE should not hold the stuff too long. If he knows exactly when he will meet you, he can go to the Embassy a half-hour before, pick up the stuff, and then see you and give it to you. S: This is all very clear.

33. G: Now here is another thing I want to tell you. If, for any reason, WYNNE can't go to Moscow, then we will leave you a note in your dead drop, with instructions on how to deliver the material. This note with the instructions prepared will be placed just prior to the Sunday when you will receive a call exactly at 10 o'clock on your home telephone from a phone booth. S: On a Sunday? G: Yes. S: This then would take place after the expected time of WYNNE's arrival? G: Yes. H: This will be in June, at the end of June, not before. G: When the man telephones you, the telephone will ring three times. S: Exactly at 10 o'clock in the morning? G: At 10 o'clock. (Aside to H): Shall the call be repeated or not? H: Yes, it will be repeated exactly the same as his (Subject's) call. No, no, the call won't be repeated this time because after all his family will be there and it would look suspicious. S: But anyway, this will simply be a signal for me to go to the dead drop. G: Exactly. H: Exactly. S: I don't need the red signal then do I? And I go to the dead drop as soon as I get the signal? G: Yes. S: So I get into the car and go -- at 10:15 I'll be there. G: It is easy enough to make the call at 10:00 exactly. S: If I take a taxi, I will get to the Center in 7 minutes. G: This would be done after the drop is loaded. The note may be placed there 15 minutes before the phone call so that everything will be in order. S: It can stay there a half hour or a half day if the children are not playing there. I have reliance in this dead drop, but actually it should not stay there long, no longer than an hour.

34. G: Now, here is another means of communication to you, when you get this receiver. For the time being you will be practicing on the radio. When you get the good receiver then possibly one message should come each month as a maximum. Of course, a live message may only come once in 6 months. The signal will always be there, either live or dummy. S: That is clear. G: Now, we are still talking hypothetically -- say WYNNE is not there. If ever you go anywhere in Moscow -- to some official meetings, receptions, where there will be Western diplomats and someone approaches you, completely by himself, and says, "Greetings from Charles PEEKE"... H: And also the bit about the tieclasp. G: Yes, I'll show it to him in a moment. G: This will be the man who will be ready to take a message from you. H: He will either give you something. S: Or I will give him something. G: Now, as another recognition signal, here is a little gift for you. It is of no monetary value but the man will wear one like this. S: And I have one like it. G&H: You don't have to wear it. G: Is it blue or black? H: This one is black; these two are blue. S: Let's take the blue ones. H: No, because this man might be either British or American. (G explains that we don't want the same identical tieclasps to parade up and down all over an official reception.) S: I won't wear it.

35. G&H: No, no, you keep this blue one just to be able to recognize the others. S(Repeats the recognition signal): "Greetings from Charles PEEKE, and his wife." H: But the main thing is the name Charles PEEKE. S: Thus far everything is very clear and fine. G: Now, in case all methods of contact fail, you cannot receive by transistor yet and both May and June has passed -- only then should you think about throwing a package over the wall to the American House at exactly 10 o'clock in the evening -- 2200 hours -- on the first Saturday of any month, beginning with July. The alternate time will be on the next day, the Sunday following the first Saturday of the month. S: At the same time? G: Yes, the same time. 10 o'clock in the evening, Moscow time.

36. (G explains that the recipient of the package will be waiting around for some time and that in case someone is in the area who can observe Subject, several minutes before or after, 2200 hours may be a more convenient time to throw the package. The recipient will be waiting a good 10 minutes before and after the hour.) S: Where do I throw it? G: The exact place -- over the wall, of course -- is where the wall joins the building. You can't miss it. S: This is behind, not on the side? G: It is off Turchaninovo. Here is the Naberezhnaya... S: Wait, let me sketch it. I know the place; I've been there 155 times. Now, here's how I understand it. (Subject sketches surrounding area

the Moscow River, the hill, Turchaninovo, and finally the building itself, the windows in the semi-basement, the kitchen. George shows Subject which way the building is located in relation to the wall, and also points out that the wall extends in another direction -- a large, 4-meter wall. Some more explaining regarding the mechanics of throwing an object over the wall so that it will land inside the courtyard. George even draws pictures. The idea seems to be that even if the object hits the wall, it will still be inside the courtyard, as long as it clears the wall.) G: Don't throw the thing any other time, only at the designated time, and only if something unforeseen happens and you don't hear from the normal contacts.

37. S: Now with respectto official receptions towhich GRU people are invited -- it is not necessary to call me personally. No, he doesn't know me. Your Chief of Protocol has to call -- depending on whom he gets on the line -- actually it doesn't matter too much. Anyway, you have to extend the invitation from your office. You will be asked how many people are invited. If you say two or three, I won't get in on it. You must mention the member of our committee -- our technical and scientific liaison personnel, and invite about 8-10 people. Of course 10 people won't come, but this will get to the Chief of the Section and individuals will be selected. Then I'll be able to pick out who will go. That is the idea. You must invite an abstract number, and not one or two people. If you do the latter, they will only send the big chiefs. H: Right, we'll fix that up.

38. G: Now with respect to the throwing -- if it is not convenient this time, a month later will do. Just remember, the first Saturday of the month. S: It can only be the first Saturday in August. G: Yes, the earliest date is the first Saturday in August. If for some reason it is not a good day, make it next month. It's not such a big effort for our man to be on the alert on that one day of each month. He will be waiting. S: He will be waiting in any kind of weather? G: Of course. S: If it is raining, and I come by car.. G: So much the better. S: And he can be waiting and getting nice and wet? G: He can step out from within at the right time. S: Of course, he won't be there that long, but it is a good thing that you made the leeway of 2 minutes before and 2 minutes after the exact time because if I'm driving I will see thatthe watchman on duty won't be looking in my direction when I throw. S: Maybe we had better make it 5 -- 5 minutes before and 5 minutes after the hour of 10. G: Fine, let's make it 5 minutes. Maybe there will be some woman walking with a man or something like that. H: Only if all other means of communication have broken down. G: Don't worry about the weather. The worse it is, the better for us, because there won't be as many people around.

39. G: Now, the last point -- if by some chance you are in another country, not in China or in the Soviet Bloc, but somewhere where you can "breathe" a little... H: This is in case we had not learned of it beforehand. G: You can let us know where you are by the following method. The telegraph address is Lebcriehi, London. S: How will I let you know? G: He wants to know what text to use. S: No, I have that. Who will accept it? H: At the post office. S: No, they won't accept it. G: We are talking of the Western countries. (Subject, and everyone else, with great relief -> OHHHHH!) S: But I have to get a visa first! G: My dear man, I'm saying if by some chance you happen to be in West Germany, Austria, or Turkey -- not the Satellites. S: Oh, to contact you from that country... G: That's right. (S writing down the address.) G: And you sign it Alex. S: Written with an X. H: And you say, "I'mastaying in Vienna, at the Hotel Bristol, for 4 days". That's all. G: If it's a Western country nobody understands what it's all about anyway and the message goes unmolested. S: Do I need a stamp? G: You send this by T-E-L-E-G-R-A-P-H! S: Oh, by telegraph! And what do I say? (G goes through the instructions again about staying at the hotel ap and so in such and such a city, etc.) S: "Alex", that's a nice name.

40. G: All instructions to you about how to pass material to the lady with the child -- how and when to do it -- will come to you eitherthrough WIRE, or will be in the dead drop. S: Again, my dead drop? G: Yes, there will be instructions on where to pass documents, cassettes or anything else. S: Yes, I understand.

41. S: Here is another method (I offer). When to use it will depend on the necessity. If I must have a quick emergency meeting with someone, I can let you know through my dead drop and the place will be the one which I have found near the Tretyakovskiy Gallery -- that is a good place. G: You mean near REPIN'S statue? S: Yes. As to the time -- It will depend on the time of the year. At this time of the year, Summer, it is still too light at 8 o'clock. Ten or 10:30 would be better. The place is already known to us. We will speak only of the time and the day, and the recognition signals can be worked out. G: So, you suggest for the person to stroll by the Monument of REPIN. S: Across from the MOSKVA River. Not near the Monument of REPIN on the Naberezhnaey (Embankment) side, but on the other side, the way I have drawn it. You can give the recognitionsignals through the dead drop -- such as what he or she will be wearing. And also "from Charles PEIRCE".

42. H: You may tell him that with regard to the lady in the park, what I propose to arrange is to decide which is the best place for her. When we have done that, we will photograph her and the children in the park so that he will recognize the wife, the children, the pram, and the place in the park where she will be playing. S: Very good. H: Can you tell us what will be the best day for you? S: For this operation? Sunday, since it is my day off.

43. S: Now, in the most extreme case, if for some reason we can't use any of the other means of contact... The Committee is frequently visited by English representatives. Americans come in also, but more frequently the English. BERGER -- and some other names I remember come from the firm of LEICA or some optical firm -- anyway, here is another variant. These representatives often come to the Committee. I will try to come out to talk to a certain man. It won't matter if there are other people there. I'll try to arrange it so I can go out to talk. You (G) will arrange with one person and you (H) with one of yours -- and when I come out, we can exchange greetings and names. He will ask for my name. When I give him my true name, he should ask me, "Were you not in London at such and such a time? (The time that I am here now.) It seems to me that I saw you when I was there at our British exhibition". I was at the exhibit; I was in London; everyone knows this. This will be my signal. This is the man whom I will accompany to the door when he leaves. We have a waiting room on the sixth floor for all foreigners. It has an elevator to the first floor. On the way down in the elevator, let him give me what's necessary. I always accompany WITNESS when he leaves and other foreigners. There is nothing unusual in this. I meet them on the first floor also, but on the firstfloor he won't know me yet. I could, I suppose, tell him on the first floor as I greet him my true name and then he could give me (the packet) on the way up -- even before we have our talk. There is a chance he will get to know who I am downstairs, but upstairs it is certain that he will learn that I am (True Name). Then he must give me the pre-arranged password. (Subject repeats, with elaboration, the business about being seen in London between 20 April and 4 May at the exhibition). Even an American can say this. This is as a last resort. We can do this, if necessary, a year later.

44. S: If all else has broken off, you can give instructions to your (G) man or to your (H) man to go to the Committee. I will be looking for him. We keep a sort of registry. I have to see to it at 10:00 every morning to keep track of who is going to be present. It is necessary to see that there is Seltzer and sweet water and cigarettes ready for the British. If I am working already working as Deputy Section Chief, I can always use my initiative. As soon as he hears my name, he'll know, but we will continue talking for another 10-15 minutes. Then he should start on the "Didn't I see you in London?" bit. This, for me, will mean -- see this man out; see him out to his car. There I will take what he has for me, a letter or something small. There is a lift (elevator) from the first to the sixth floor. You press a button to get it up to the sixth floor when you see foreigners out. The No. 1 entrance is only for the chiefs and the foreigners. The rest use the entrance further down -- the center one. All this is as a last resort. This is a means by which

I may be reached. They all give their names, even the female interpreters, and the foreigners always write theirs down so that they will know later with whom they had a talk.

45. H: Can we just go back to the lady in the park. The idea is that he is not to talk to the lady. He will not receive anything from her. She will observe him. She'll be expecting him, you see. He will drop his material in the pram at a suitable moment and go on his way. As soon as she's noticed that, she will collect her children together -- the youngest one will have to be put in the pram -- and go quietly home. (Subject suggests that he should make some kind of comment either about the baby or about the carriage as he deposits his material, to make the pause more natural looking. Everyone agrees.)

46. S: There is just one thing that is not quite satisfactory to me. That is that the lady will have nothing for me. G: This might be dangerous. H: If we have things for him, we will give him instructions where they are. S: I suppose I can get those things from the dead drop. G: Why should she carry dangerous items which might compromise you? S: Where will you put bulky things? It's not good to put too much into my dead drop - a small box is all it will hold. H: Then, there will be instructions where the rest of the things are.

47. G: Now, you should make some notes -- but in a different manner. These are the things which are of most interest to us (KGI). You can burn the notes, but make sure they are welded to your memory. In the first place, when I am going over the details, don't feel hurt. Secondly, the details are only given so that you have an idea what it's all about. You are not going to write a whole volume. I will read it slowly, precisely, and you will get the crux of it. (Subject writes notes in ink.) G: First: Information which will help us determine who the Illegals are in the West -- primarily those in the U.S.A. and in the U.K. Second: Information, if you can obtain it, as to whether or not the British and the American codes have been broken by the Soviet Intelligence. Next point: Regarding the strategic rockets -- how many there are and when they may be ready for deployment; whether they are in the planning stages or are already deployed. This information is desired on rockets of all ranges -- approximately 1500 km and above. Find out, if you can, the general areas of the bases for rocket launching of all ranges; if you can get them, details on the target accuracy and the radius of error (VYPADANIYE) for the various rockets. What degree of accuracy do your people expect to reach with the aid of the geodetic data which they may have now? What is the theory of target location? Which targets are considered to be of strategic importance? How many missiles do they allot to these targets. S: Please repeat that from the beginning?

#15

48. G: (Elaborating) What is considered most important strategically -- our long-range aviation bases, whether they are in England or America? Is this of primary importance to them -- to cut off our atomic capabilities? Or what are their estimates? How much is allotted to this? Next question - where are the strategic rockets being made and in what quantity? This is all on the rockets. I'm just repeating that you should get all details and any information you canon rockets. I am underlining these points because they are not just general, but have been thought out. S: I agree that these are specific and concrete questions. G: Now, what point has development been reached in anti-rocket missiles (the defensive ones)? In other words, the missiles to be used against our rockets. S: I know, I know. G: Also, in what stage of development are the ZURS, the anti-aircraft guided missiles for low or high altitude aircraft? By high, I mean beyond the ceiling of the V-75. How many submarines do they have propelled by either chemical or atomic fuel having a tremendous radius of operation? Do they have atomic weapons' warheads? Are there any missiles with such warheads? What possible tasks (VOZMOZHNYE ZADANIYA) do they have? What is their specific assignment?

49. G: Now regarding atomic matters -- what are the atomic yields at various specific strategic missile ranges? How are the fissionable materials allocated to the various forces -- strategic, tactical and defensive? What is the status of production of fissionable materials? Do they have difficulties in their development, set-backs, and where is the center of the production? The easiest for you probably will be the GKHK. If you have a chance, find out about the yearly or the long-range plans, the amounts for financing specific scientific developments, and the priorities of your scientific interests in your committee. How is it distributed between the civilian and the war industries? If possible, find out something on allocations for nuclear physics, rocket technology, electronics, chemistry. How and into what categories or subdivisions it is broken down.

50. G: Now -- and this is the last -- if possible, photograph any documents which are important, those having any information or description of strategic missiles. Also, the latest atomic tactics and any regulations which may exist in respect to bacteriological and chemical warfare. S: You will have a new field service regulation (from me) in a very short time. G: That's what I said. Any new field regulations which have any atomic supplements -- SMITH's lecture, for instance, or any other such people in GSU, on agent, operational or illegals matters. If you can find a good detailed and exact map of Moscow -- 100,000 to 1 -- photograph it. S: I can get a map of Moscow. There are various scales -- some are secret -- 1 to 25,000; 1 to 100,000 and 1 to 200,000. G: If you can get any Secret or other type maps, please do.

51. G: Now, three more little items. Those 150 requirements that you told us about -- the scientific-technical intelligence to be collected on America and other countries of the West; those telephone books and lists which you mentioned. Also, it would be very important to establish definitely the organization of GRU - whatever is not clear to us yet. What number does the Operational Directorate have now? What other subdivisions are there? The Special Missions Section which has to do with diversion and sabotage - is that school for sabotage still operating? The one you told us about. S: It is operating. It has been reorganized, but it still exists. G: Under, whom does it operate? S: Now it is subordinate to the Chief of Staff of the General Staff. Before it was under SERBRENKO. G: So, it is subordinate to the chief of the General Staff, not the GRU? S: That's right. It's actually in GRU, but the control has been moved up. KHRUSHCHEV moved it. He doesn't trust SEROV. You see, that's all clear.

52. G: Anything which you know about the organization of the KGB would also be helpful, of course. These details are to give you a clearer idea of our priorities. We do not expect you to get everything but whatever you can get -- thank the Lord! S: This will all go in here for the time being. Later I'll sort it into different pockets. I'll leave the other things all here until tomorrow.

53. S: Wait, I did not put down the amount of rubles on that piece of paper yet - the receipt I wrote. H: Oh yes. Alright. Coming up, coming up... G: Here, write with this pen. S: The ink will be a different color. How much? G: Write 3,000. S: I know, I know. G: Look what small stacks they make! (New rubles) S: These are brand new. G: The entire Soviet Union has new ones.

54. S: Let me have a piece of white paper (for wrapping). I have given you many suggestions about not using certain people. I ask you again to remember this and think about it. G: Our most important thought is not to touch people which might jeopardize your safety. S: No. I was thinking about people like FEDOROV, VAVILOV, people like that -- "our" people. G: This is not our most important task. We are Intelligence Officers, not Counterintelligence Officers. We don't want to mess around with these people. Our Counterintelligence doesn't know about you. We don't want to let them know. S: Don't tell them about me. Why should you tell them? But tell them about these others. If these other people make trouble for us, why make a Chinese wall out of the whole thing? G: Your security is of the most importance to us. I am sure we worry more about it than you do.

55. H: Can we do these pictures now? G: Yes. Tomorrow I'll check you through again quickly. S: As far as the camera is concerned, we are all finished? G: Yes. S: Let's have the British photos. We'll finish these up today. I want to find that code clerk. I saw him again. H: Okay. Here, you take down the numbers -- you take them down too, Mike. It will be easier that way. S: These are the fresh ones, aren't they? G: Which ones are these? H: No, these are the ones he saw before. He asked to see them again. H: These are the '59-'60-'61 photos.

56. S: Here is the chief bookkeeper of the Embassy. (11639)

57. S: I don't want to skip over the code clerk. Here is one that looks very much like GERASIMOV, but it's a very bad photo. (9664)

58. S: Here is the GRU REZIDENT. (1650) He is the REZIDENT here - Lev Sergeyevich.

59. S: Here is one from KGB. He has just arrived. (11904)

60. S: Here is another from KGB, also recently arrived. This one came first and this one came later, the Committee of Technical Information. (4566) M: Which arrived first? H: The other one. The second one (4566) arrived first. S: I called him VORONOV or something before, or VOROB'EV. (Looking) I must have mixed this one up before.

61. S: This is IVANOV. (9946) Captain 3rd Rank, he graduated from the Academy with me in 1953. He is married to GONSKIN's daughter.

62. S: Here is the Embassy physician. (11641) A woman, the only one.

63. S: Here is the duty officer, who is also a courier guard (DEZHURNYY KURYYER OKHRANY). He guards #13 and #18 houses. (9584)

64. S: Here is another duty officer and courier guard. (8632)

65. S: Here, let's pull back that picture - the #9664 you asked me about it. The one that looked like GERASIMOV. Here is the real GERASIMOV. (935) He is the one who is coming out to see MERRIMAN tomorrow. Is the other photo the same one? They do look alike, don't they? They are different people, however.

66. S: Here is my friend SHAPOVALOV. (10943)

67. S: Here is another Courier Guard. (11572)

68. S: Here is VORONIN, Zhenia (Yevgeniy). That's the one I talked about before. (8213) His wife, Galia, has kissed me. Here is one from KHB. He graduated from the Academy in 1954. You should keep on burning the KHB-nik's. As I told you, this is our business. Or is it the business of CI?

69. S: He is an operational auto instructor. He taught me Operational Techniques at MDA (TSS). (12006) Now he is a chauffeur for the RESIDENT. I gave you his car number. He is the one who makes concealment devices in cars.

70. S: I still have not found PAVLOV. I feel that these are a fresh batch. A whole regiment! Here is Igor MILOVIDOV. He left here. (7094) He works with me on the GRTK. G: Tell me, is this MILOVIDOV non intelligence? S: He has been accepted by the KHB.

71. S: Tell me , what is the RESIDENT's name? I know it is Lev Sergeyevich, but you must know his last name! G: We just don't have it handy. It's here somewhere. I'll find out tomorrow. S: No one told me here and I didn't want to ask. H: Make a note to find out the name of (1650).

72. S: Are these new? G: These are 1960. We don't have completely new ones which is why there are repeats. S: Here is PAVLOV -- PAVLOV without glasses. That's why he was hard to recognize! (9459) G: Finally, PAVLOV! Thank the Lord! The Deputy RESIDENT. S: Anatoliy --

73. S: I still have not found that code clerk. G: Tomorrow everything should be KHL'TUREN with NEKHIDAN. S: Everything will be KHL'TUREN. Have you told him everthing? G: He couldn't understand you at all on the telephone. S: I told him 9:30, that I wanted him to meet a friend of mine. Didn't he understand? G: He understood who was calling and he understood the words 9:30 but that's about all. S: I did not tell him everything over the phone that I told you. I don't understand him at all.

74. S: So, we have found everyone except the code clerk. He's a bird! He decodes, transmits. He never goes out alone. (George explains that it is because the photos are grouped by years.)

75. S: Here is Lt. Col. VORONIN, the same name as the other one. (218) He is the Chief of the 3rd Direction (England) in GRU.

#15

76. S: Here is Col. KONSTANTINOV, Anatoliy Mikhailovich. He is the son-in-law of GORKIN who has two sisters. IVANOV is married to one and this one to the other. (2733) He works at the MD Academy, Chief Instructor, as I told you.

77. S: Here is one who works in GRU as a Senior Officer in the 3rd Directorate. (5597) He is under General SOKOLOV. He is a Colonel.

78. S: This one is a GRU officer and works in the 3rd Directorate. (2587)

79. S: Here is a GRU officer who now works with your BERKHEEV. (2204) (Illegal)

80. S: I'll have to look at '61 again. I have to find that code clerk. Unless he arrived very recently, I don't know when he arrived. Are these all the photo-albums? H: No, not all. S: Remember there was one we saw in Operational Techniques, in the 1st Section. We saw him before, remember? G: Yes, yes. S: At that time I showed you several KUZnik's, now I don't see them. H: No, those were in the other volumes. You see these are different volumes.

81. S: Here is one from GRU. An officer who works presently in my section under ROGOV. Not in GRUK, but in GRU. (2903)

82. S: Many KUZnik's are not here that I mentioned before. Are these all the albums? H: No, just for the last three years. Last time we had 1957, 1949, 1952, 1955, 1958. Now he's filled in the last three years.

83. S: I don't see VORONINA, Galochka. G: Does she work there or not? S: No, she does not work there. She just had a baby girl. She lives here.

84. S: Still can't find the "SHIPRIK", the code clerk. G: That's no problem. J: Let's pour another drink. H: Alright. It's not too bad, not for today. G: We don't have too much left for tomorrow, thank God! There are still some of our photos, and a couple of questions. That's all. S: So, this material I'm leaving here. G: Alright. S: This is all mine, all my notes. It's all here - till tomorrow. We have not found the code clerk, but that was alright for today? Here we are, Strategic Officers, making plans. Now I want to express something not quite clear to me. We have been working here.

Why can't we present to the government any ideas or conclusions which we have reached through our work? Is this not allowed? G: Yes, but we don't want to give away the fact that you are with us to those people who have no need to know. (Subject looks at some photos taken of him.) S: This is for Nikita Sergeyevich. I will show him how to practice deceit. (Everyone laughing and joking.)

85 S: What time do we meet tomorrow? 9:00? G: Yes. We will work like this -- 1 hour for questions; 1 hour for photos; 2 hours for fun -- or do you want 8 hours? S: How about the following morning? Should I skip over to say goodbye? G: For about 5-10 minutes, sure. S: Mr. Harold will come also? H: Of course. G: I'll be there also. I will not be leaving yet. When do youhave to be at the airport? At 11? S: No, we are leaving here at 11. I ask you to please call WYMMS tomorrow in the morning, to clear this up. I'm not making this up. I'm not overimaginative; I am a realist. You can see this all the time. G: We will tell him that it was forbidden. That's all. That's final! S: Yes, tell him that (Subject's true name) wanted to give him something on his own, but you would not permit it. Tell him that you will take care of everythingfor him and that he will get everything that's coming to him, if he works well. This will be stimulus for him. It will give him incentive. Also tell him about the receipts from the hotel. Give him a pat on the back for organizing things so well. He did, you know. They are feeding us for nothing. Of course, we are careful. We don't order any wine. I understand very well why this is done and they (the delegates) are very pleased. I was able to "buy" them this way - through your help. Even the highly-paid professor said, "(Subject's true name and patronymic) how well you organized everything." G: Have you bought everything you needed? S: Not yet. I still have$40 left. I have to buy a few more presents and some odds and ends. I'll have time to do this tomorrow. G: You got the one for VARENNIKOV? S: Yes. G: It was a good one? S: Yes, very very fine. G: It will be from Mr. and Mrs. (Subject's true name)? S: Yes, from Mr. and Mrs. G: And from us! Ha-Ha-Ha!! G: You'll have time to finish shopping tomorrow. It won't hurt to buy a few extra things for presents.

86 S: Right. Well, (clicking glasses) now we've finished. We'll say goodbye day after tomorrow. Tomorrow we'll start working again to finish. Well, all the best! S: You will think about the things I have mentioned. Everything is right. The money is received - both for operational and personal purposes. After all, the presents - are they not operational expenses? H: Yes, of course. S: Now, I leave my briefcase here until tomorrow. I don't think

I'll telephone her tonight. I'm tired. You know what street she lives on? I can't remember the name. Today I rode past her house. You know, she really fell for me. She was quite sincere, exceptionally so. Two hours was really very short. She was really a bit surprised that I left so soon. She is an experienced gal. I asked her, "Why don't you get married?" She comes from a good family and lives pretty well. She has this apartment -- I don't have such a nice one! The rooms are small but all the conveniences are there. Tomorrow will you be here during the day, in case I call? G: It's hard to tell. If it isn't convenient at 8 o'clock, we can make it 9. S: Right now, 8 o'clock is convenient for me. G&H: If you are not here at 8, we'll wait for you. S: Let's make it 9 o'clock. There's no use your getting here and waiting. G: Alright, 9 o'clock then. S:(And all) Goodnight! (Subject left at 0115 hours, on 5 May 1961.)

[redacted]

Meeting # 15A (London, England), 4 May 1961

1. (Subject knocked at door at 1420 hours on 4 May 1961, Mount Royal Hotel, Room 360. Only H and J were present. The unexpected visit was prompted by a note left in Subject's mail-box which he could not understand.) S: I ran here for a few minutes to mention two things. First of all I spoke to SHAPOVALOV at the Embassy this morning. At 7 o'clock, as he explained to me, there will be a reception at the Pakistani Embassy. SHAPOVALOV will be there. His car number is 462. H: 462? S: Yes, the sum of the numbers is 12 -- that makes it easier to remember. He will be alone, without his wife. From what could be made out of the conversation, his friend will be there.

2. S: Now at 2 o'clock, when I was picking up the key, there was a note addressed to me. (Opening letter) "Mount Royal Hotel, Mr. -----tiev rang and would like to contact you. Telephone 9831." That must be the number. Who is this? (H and J trying to figure out the name) KORDIV, KORDIEV, KORIEV? Maybe it's KONEV? KONEV -- that's right! S: That's Marshal KONEV!! J and H: No, that's impossible!

3. S: I was in the Embassy today and no one told me anything. Anyway, I did not call this number. I was at the Embassy today, all day, and no one told me anything. I ask you to please clear up this matter. I will be here this evening at 2000 hours. H: Well, all right. S: Who can that be? I did not call on this phone. (telephone ringing; J goes to answer it)

4. S: The letter was with the key and when I went to get it at 2 o'clock the letter was with it. They didn't say anything about this to me at the Embassy. H: I don't know who it is. S: Is it this hotel? Do they have four digit numbers? H: This is a telephone number. We can find this out.

5. S: Well, I'll be here at 8. Now I am going to WYNNE. My people are working at the Embassy. I was running around there. I had lunch there. I saw everyone there and SHAPOVALOV brought me here by car about 2 hours ago. I repeat his auto number is 462. He drives it himself ... in the Pakistan Embassy. So, I'll be here at 8 o'clock tonight. H: All right. S: I'll be here at 8 and at 9 we will have to make an interruption. The delegation will be coming and I will have to meet them and we will have to eat together. H: All right.

6. (Subject left at 1425 hours, having stayed 5 minutes.)

[redacted]

[redacted]

Meeting #16, London, 5 May 1961

1. Subject arrived at 2105 hours on 5 May 1961 at Room 360 at Mount Royal Hotel, London.

2. G: Did you have trouble getting free from WYNNE and the delegation? S: We just parted -- he was here just now with his wife; we drank whiskey, said goodbye and he left -- what do we need him for? G: But this evening with the delegation? S: The delegation was here just now -- everything is finished. J: Okay, let's get to work.

3. G: Well now, tell us in detail what happened with MERRIMAN. S: I am not completely satisfied. G: Why? S: Everything went with a four -- not a five. When one gets mixed up with an old man -- Both you and I explained exactly when he should come, but he was seven minutes late. I went out to meet him -- you were going out and I spoke to you at the entrance. (Subject had met H and M on the hotel staircase as the latter were leaving.) You left and he arrived soon after that in a cab. I led him in and SHAPOVALOV and GENERALOV were waiting for him. The REZIDENT had decided to introduce both SHAPOVALOV and GENERALOV. I kept them in the hall, opposite the restaurant. The old man arrived seven minutes late and apologized. I had explained to him and so had you that twenty minutes was the limit, but it was impossible to break up the conversation for an hour. I got up, said I was in a hurry, ordered coffee and drank it and still he stayed. It wasn't only he -- it was GENERALOV too. GENERALOV got it from the REZIDENT for this. He put questions to him. GENERALOV's eyes lit up, but MERRIMAN found it difficult to understand that there would be time for conversation in the future, that it was not necessary just then -- although he had been warned. On the way I had told him, "Do your best. Arrange all conversation as quickly as possible and finish" (in English). I explained to him all this and he said yes, yes, yes -- but he did not understand me. You told him too. H: Yes.

4. S: Well, MERRIMAN began to talk about cement -- everything went well -- we should be thankful. I looked at GENERALOV -- his eyes lit up -- it seems that he has no acquaintances -- he is very passive -- if only his English were better. Then MERRIMAN stood at the entrance, showed off his silver things, smoked a cigarette, showed us how, he said, nothing would tarnish it -- corrosion or anything -- a whole hour! As soon as I knew I should have gone and got a taxi. GENERALOV made a second mistake and I reported this to the REZIDENT. He offered to take MERRIMAN in his operational car -- that is, he let him see the license number. They are idiots -- they don't know how to work. G: But

APPROVED FOR RELEASE
31 MAR 1992

[redacted]

this was not a minus for you? S: No. I will tell you everything -- why am I dissatisfied? The conversation dragged on, they were pushing MERRIMAN -- coffee and more coffee ..... "why don't you go away?" The hour passed and I knew that ANDREWS was due to arrive. This was why I was worried, but he didn't know this. I signaled to SHAPOVALOV I wanted to take him off to the toilet. G: Couldn't you just have spoken to him in Russian? MERRIMAN doesn't understand Russian. S: He would have flared up, "I wanted to study MERRIMAN further". I thought to myself, "there is time for this -- at some lunch, you fool -- you were in America, they taught you, surely you can finish this off."

5. S: Everything at first was excellent. Then someone sat down behind me. I felt that he was listening to our conversation. I wondered if you had given someone the job. G: Not on your life! S: Then I asked this man, "Excuse me, what time is it?" He showed me the time -- the man was just an inquisitive passer-by. But this was nonsense too -- We came out to the street, went to the operational car and got in and just then ANDREWS came by. He saw us and turned around. What could I do in this situation? He came up and greeted us, "How are you, Mr. GENERALOV? I believe that you have had an operation", and so on. GENERALOV said to me, "I didn't want to meet ANDREWS again at all. He has seen us with SHAPOVALOV and MERRIMAN". I said, Whose fault is that? Why did you drag out the conversation like that -- why do you work so clumsily? I will inform the REZIDENT" .. which I have done. They exchanged visiting cards -- everything was clear, he said. He handed over the material "Goodbye". Now they took him on further; "To hell with you", I thought. I sat with MERRIMAN and SHAPOVALOV with him in front. We went about three kilometers and then said goodbye and dropped MERRIMAN and they arranged to meet on Friday.

6. S: What is my request? That MERRIMAN should not telephone on Friday. Let them call and invite him. G: Definitely. That is clear. S: Tell MERRIMAN his sclerosis should get worse and he should stay away from work; this is my request. If they do not ring him, he should wait two or three weeks -- no less. MERRIMAN did not say everything -- what he did say he said well -- but he said it tediously. Everything should have been put off until the next time. And that other fool too ..... Well, we said goodbye to one another. And ANDREWS told WYNNE he had seen MERRIMAN with (Subject's true name) and with others from the Embassy. H: That I know already.

7. G: Have you seen the REZIDENT since then? S: Of course. We left MERRIMAN and went to the Embassy to report to the REZIDENT. At the beginning GENERALOV ran off to the REZIDENT while SHAPOVALOV

and I wrote up a report on me and on the project, excellently written .. about the work of the delegation with me as leader -- about all the new information to answer questions for our national technical problems. But this is not the point. GENERALOV who ran to the REZIDENT told him about this and said, "You know, this is an interesting old man. I decided to ask him some things". He was already preparing him. He said, "Some stranger near (Subject's true name) was sitting behind us, beside him." He also mentioned that ANDREWS had met us on the way but didn't pay much attention to this. "Well, so what? We will use him unwittingly. We will build up an acquaintance with him and receive information -- get to know people through him." My request is that the old man should do everything that you say, without taking the initiative. Initiative on his part now would be wrong. H: It is difficult to work with the old man. S: Yes, he should not ring up -- GENERALOV invited him to lunch and MERRIMAN returned the invitation. He should let them pay first -- the Embassy will invite him. MERRIMAN pleased them -- he conducted himself well, he was interesting, he told stories. GENERALOV mentioned one of his acquaintances, a Professor ..... MERRIMAN said, "I know him very well". Everything was friendly and in balance. MERRIMAN took them in.

8. S: I will write up my report solidly. If only there had been none of this long-windedness. The stranger appeared during the second half of the conversation. If only we had not met ANDREWS. This means that we did not fulfill our plan entirely and properly, if we examine every detail. Three things should not have happened. There should have been no second man -- for all the time at least. He could have come at the end. More than half the conversation could have taken place without him; there should have been no meeting with ANDREWS and there should have been no such long-windedness.

9. G: You reported all this yourself? S: Yes. After I finished the conversation with SHAPOVALOV, I said, "I must go see the REZIDENT; he may have something to say to me about his consequent decisions". The REZIDENT was asked and he said very well, let him come. I went into the basement in House #8 and reported to him. He said, "Everything is normal and good. We will use him unwittingly and we will not give him agent tasks." I said, "Well, I've told you everything". He said he would send a personal letter with me, wished us a happy journey and said that tomorrow I will see the Ambassador. We shook hands: there was a short conversation and that was all. G: You still don't know his surname? S: Whom could I ask? He didn't give his name. As soon as I get back, within five minutes, I will know his surname -- by another channel and it will be more realistic to do it this way. But his name and

patronymic is Lev Sergeyevich. Now I come to WYNNE ....

10. H: Now, before we get on with this can we just ask how he explained away how he had briefed MERRIMAN before these men (i.e., SHEPAVLOV and GENERALOV) arrived? G: (translates). S: Just as we agreed the day before yesterday. I telephoned and said that MERRIMAN had invited me home; he had prepared something and wanted to say goodbye to the delegation. The whole delegation was there at first: he took leave of them and left. G: Excellent. That is a beautiful legend (he explains in English). The delegation was there for two minutes -- thanked MERRIMAN -- and left. Everything was normal. H: I didn't quite get how he gave the brief to MERRIMAN about the cement. On the telephone only? G: (translates). S: When I left Moscow, specialists asked me to clarify certain questions on cement machinery. H: We know that. S: I met MERRIMAN at Oxford after we had visited "Edgar Allen". (George explains in English). S: Today I have remembered a conversation. When MERRIMAN was in Moscow he promised the specialists there that he would send them something and that he would keep in touch with them so everything would go as planned.

(11) S: Now about WYNNE -- he and I had a conversation today at 1830 hours; I was at his place. G: Have you spent the day buying your things? S: I was a long time at the Embassy checking accounts and then I went to the shops. G: Then you have done everything? S: Not everything. I will ask you to help me in some things. I've done everything for myself and I've got the presents -- everything has gone well. At 1830 I went to WYNNE's home. He said, "Well, let's have a last drink." Then he said, "I would like to invite you to supper." I said that it was not necessary and I had to meet the delegation. Then he said, "Well, then my wife and I will come and say goodbye to the delegation. We had a drink or two. I rang from WYNNE's, telling the delegation we were coming in ten minutes -- everyone arrived. Mrs. WYNNE came; we went to the bar and had a drink, sat for a couple of minutes and then they went off. I went to my room, collected some photographs and catalogues of where we had been: the others went to do their packing, and then I came to you. G: How about the receipts? S: I will tell you in a moment. I had a conversation with WYNNE. He told me that he had spoken with you and had received instructions. G: You said this? S: No, he told me this since he has spoken to you today. Regarding money, I said that in general I am not working for money -- that it is not necessary to give me money..... You see, when it is necessary to speak English, I understand WYNNE very well, unlike [redacted]. Well he said, "I'll do everything that they ask me to do and I only need money." So WYNNE's mood is not a bad one. On

[redacted]

receipts he has given all the instructions; he has already had receipts made for all the times we were in, and we will get the receipts for this hotel tomorrow. G: Excellent.

(12) S: I have a request. In the morning -- we are leaving at 11 -- you should tell someone that when all our things are (at the airport) nothing should be opened. There should be no formalities over excess weight. They should take no money and there should be no talk about this matter there. (H says that WYNNE will arrange for the payment of any excess baggage. G points out that the baggage must be weighed and that representatives of AEROFLOT work on this at London Airport.) S: That will be fine. I'll explain that to my people.

(13) G: Then about WYNNE. I beseechh you -- do not promise him all sorts of things. It is not necessary to make him promises which will be difficult to fulfill -- You see, this influences him. S: I did this already in Moscow -- I told you. G: I know, but now it is just not necessary to make him any promises. We will do what is necessary -- if you want something special done, let us know and it will be done. Connections with him are very bad operationally. S: I understand, but from my side I do not wish to ask you to do what I promised at the outset. Yesterday .. when I said how I felt about the gist of the conversation with him ./ G: Now you can set your mind at rest. You know yourself that you have taken steps. S: Well, so much for WYNNE.

(14) S: And we have finished about [redacted], haven't we? [redacted] should be absolutely quiet (inactive). What is bad about [redacted] is that he does not understand me and I do not understand him. When I said to him, "You promised -- about steel -- perhaps you will be coming to Moscow again to give lectures... You lectured us very interestingly in that field, and so on. Write us some sort of open article and we will have it published -- we often publish articles by foreign authors on technical questions." He said, "I will think about it. I know HYSOVSKIY (one of our main specialists) was interested in heat-resistant steels for rockets..." Why did he say rockets? H: Because he is a rocket man, you see. G: Because he is a simple mortal. He does not assess things as you and I do. He is not an intelligence officer. S: I understant that heat-resistant steel is the business of a specialist. Why did he say that? He made their ears go up..... "What a whale!", they thought.

Skal
Ks
K
for Rockets

(15) GENERALOV was shaken -- what a fool -- straight out of the conversation he invites us to leave in his operational car. And now -- it doesn't matter that we met ANDREWS does it, or that ANDREWS told WYNNE? G: No. S: Good. Just so that you know. I wasn't happy about it. If we had finished 20-25 minutes earlier,

[redacted]

#16

(20) S: Then something else. Are you getting ready a second Minox? H: We will give it to WYNNE who will give it to him (Subject) in Moscow. G: WYNNE can do this easily -- it is only a tiny thing; he can take it with him and hand it over -- no problem. S: Well, I wanted to ask. I do not want to keep two Minoxes at home. I will think about it. H: We could get the Minox in his DLB. S: I have worked this out. You have given me enough film for 1000 frames. To take the Regulations (250-270 pages) with two frames to a page -- will need 500 frames. Then I will already have used more than half. I am worried about film. Additional film should also be provided because I already have another book to copy. G: The pages of the Regulations are small enough for one frame each. H: This is the next question I was going to ask him. I propose that he should receive more cassettes from WYNNE. How many does he think he will be able to take? You see this is quite important because as it is difficult to get them in otherwise bulky packages like this -- as opposed to small messages. How many does he think he will be able to take from WYNNE so that he has got a supply for two or three months? (G explains.)

FSR over's title

(21) S: My number one project is the Field Service Regulations because it is very important and interesting and there is one booklet by Chief Marshal of Artillery, VORONOV -- a modern evaluation of rocket forces. This is theoretical (there is no description of rockets), views on their massed employment in military operations -- a good booklet. It is Top Secret. One can see it only be presenting a pass. If I can work on it, it will be very interesting. Then I will have the basic manual and there will be lectures on special training (intelligence).

(22) H: We are giving him twenty films through WYNNE. Now, has he any idea in his own mind -- what is his conception as to when he would want to pass over further material? Does he think that he will want to do it at the end of June or July -- that is, after WYNNE? Does he want to do it every month or every two or three months? How does he consider the situation? (G translates.)

(23) S: Let us not wait for many months. I have thought about this. This is a very good question. Here is my plan -- I will prepare as much as possible before the arrival of WYNNE -- some of this I have already -- you will have enough work for a month. I have thought about the following suggestion although I did not mention it before. KING knows me, he invited me when I was looking after WYNNE's delegation. I met him and his wife and got to know him well when I was at that fool's -- [redacted]. Let KING organize something and invite about ten people from the Committee ([redacted] arranged this BARDAK for 100 people -- with a negro -- when he got

himself a flat and we went to the flat [housewarming].) Some celebration should be arranged -- the birthday of the Queen's son and with this as a pretext he could organize. I want to give you my opinion as an intelligence officer. I liked [redacted] -- if he would take films and additional material when I offer it to him I would give it to him -- with your permission and on your orders. H: No. S: No? Then another man at [redacted]'s place? H: Another man -- our man.

(24) S: Or at [redacted]'s. But I do not want to work with [redacted]. H: We don't want you to either! S: He kept my packet for two days. After this they rang him up -- now a newspaper and now a question from the Committee through that interpreter-secretary of his -- I gave you his name -- a Russian who works in the 1st Directorate (KGB) (--half these people should be chased off. They are informers.) His name is SENATOROV. Without doubt, [redacted] already knows that I have been in England for 16 days. He is no fool and he knows that we will definitely have been active in the tactical and strategic fields. He understands this without your words or questions. He knows that I am in England. He knows of the wishes which I admitted to him. G: He did not understand your wishes since he did nothing -- He is a complete fool! S: He understood everything. He even asked me whether I wanted to live in the Soviet Union or to defect (ILI K NAM YEKHAT'). J: Oh really? M: That's a new one. S: I told the man everything about why I was making the requests -- and he understood everything, but you are right -- he is a complete fool.

(25) H: Can we just go back to [redacted] for a moment? Under no circumstances must he attempt to say anything or pass anything to KING. If [redacted] arranges an invitation for members of the Committee then he must only act when a man makes himself known to him. (G interprets.) S: And what will you say to this man? G: He will have the signal (Note: A tie-clasp had been given to Subject and an identical one would be worn by anyone who was to contact him.) S: What will you tell this man? I will walk around, look at everything -- all the rooms go into the kitchen, to the toilet. Your man should watch me. I will contrive a situation in which I am alone and I will give him a package of exposed film. G: He will be our own trusted man and no one else will know. S: Once he has them, that's all. Then it is your business. Has [redacted] already been warned that he should keep silent? --because he knows everything regarding [redacted] and [redacted]. H: I know. I have done this. S: Will [redacted] interfere? G: No. S: [redacted] will keep quiet. G: Absolutely. S: That's clear.

[redacted]

(26) H: He only wants to hand over, then, at the meeting? Does he rule out any question of the lady with the pram and all that? G: Oh no, no. H: I should like to get back to this time factor. (G interprets.) S: There will be new material from me each month -- sometimes a large quantity, sometimes less. But you cannot invite me to an English function every month. I must be asked to the Australian, English -- and if I become deputy to the head of the section -- to the American (Embassies). I can be invited by the Australians, the English, and the Canadians -- once by each in every three months, without repetition by anyone in that time.

(27) G: It is possible that you will be invited once in two months on an average. S: No. I don't want to keep material for two months. H: Once a month. That's all I wanted to know, because if we are going to use this ploy during the summer, using the lady in the park with the pram, I have to give her instructions how often she has to be there -- this is the whole point I want to get at. (G interprets.) S: This is my suggestion: on the first Sunday of each month -- at different places, the first place would be where I suggested -- opposite the statue of REPIN. Can she go out walking with the child in the evening? G: No, it would not be normal. H: And she will only push the children out in the pram in the immediate rayon where she lives. She can't push it all over town without taking a car. S: Doesn't she take the child out for air before it goes to sleep? (G interprets H's remarks.) S: The park is a different matter. G: She lives perhaps two or three blocks from the park; she can sit or walk in the park. It will always be in a park. But in which park? -- the one not far from her flat.

(28) S: I have a question. Suddenly I have an urgent message -- like the occasion when Marshal ROKOSSOVSKIY was sent to the Trans-Caucasus and VARENTSOV was there -- all the rockets were prepared and ready to fire at Turkey -- this happened. If something like this should happen -- how could I keep silent? Through what channel could I inform you? H: This is a thing on which I propose to give him instructions through WYNNE. At the moment we have made arrangements so that we can tell him that we have left a message in his TAINIK, but we have not yet given him any instructions on the return method. I am hoping to be able to lay on a drill involving a telephone call at a given time on a given day once a week, so that he can tell us to go and clear the dead drop, but only once a week. What I propose should be arranged, if he agrees, is that he should be able to deliver more bulky material such as Minox cassettes or anything else once a month but he should be able to inform us of something short which he can write down and put in his small dead drop once a week. But that I will only arrange after WYNNE has gotten back. (G interprets.) H: I am hoping to have all this arranged so that I can send in the instructions through WYNNE.

[redacted]

[redacted]

(29) S: That is very good. But one must foresee this -- for what could happen? The Marshals and everyone go somewhere -- this is the very basis of our work. All else is good and important, but such a situation might arise. ROKOSSOVSKIY and VARENTSOV and another one -- I mentioned him, a General -- sat ready. They were ready to strike Adana. G: Well then, the radio and the Minox will be at the Embassy at #1 readiness and the films will be handed over to you by WYNNE with a message from us. S: Then this is all agreed, and I will be told, when you work it out, how to contact you in an emergency but only when I have something of real importance to report -- such as the removal of KHRUSHCHEV or the imminance of military action. H: Or only if he himself knows, for instance, that he is going to Canada then he should use it for that sort of purpose because the sooner we know, the better we can arrange things -- as well as critical intelligence. (G translates.)

30. H: I would still like to come back to these twenty films, because the biggest problem, which we have not yet really tackled is how to re-supply him. You see, we can pass him messages through the small DLB but there is a much more difficult problem of re-supply to him of Minox films and, therefore, I would really prefer (although we don't expect him, Heaven knows, to use more than twenty films a month) to give him a larger supply when we have a safe opportunity through WYNNE than to have to run risks in order to get supplies to him. I would much sooner give him a three-month supply if he can hide it rather than to do it through other hands. (G translates.)

31. S: Then we should hide them in shirts or in some good flat box -- a cigarette box or something like that. G: On the subject of the radio set, that is also what I have in mind -- if you could have it hidden. S: I cannot do that straight away. The dacha is not mine. There are people there, the clandestine situation is poor. Now something else I should like your advice on -- perhaps I can rent a dacha from someone who has to go abroad suddenly for a year -- perhaps I could even buy one on credit -- why should I buy one if I am going away? H: That is not necessary. G: If you get the chance of renting a Dacha, by all means go ahead. S: On a Dacha I could do some digging, plant some flowers and make caches and not even a dog could find them -- if they suspected me even. G: Are you thinking of one near town where you can go easily? S: Of course one can go to a Dacha in the winter, and there I would have my own room. G: And you would go to work from there daily? S: Perhaps sometimes, but not every day. But in summer one can live there the whole time and go to work every day -- we are allowed to do this in the summer. G: But only during vacation time? You would have to go into town by train when you are working? Wouldn't it be far out? S: It could be as much as

[redacted]

[redacted]

OKRUGI). Colonel-General SHTEMENKO was appointed to deputy commander of an OKRUG. G: Up to the present moment? S: Yes. I know this. G: And Chief Marshal of the Air Force, GOLOVANOV? Has he retired? S: He is not working now; he has retired. G: For a long time? S: Yes, I have not heard of him for a long time. G: And MALENKOV -- what is he doing? S: I'll tell you about him. Now almost all of them are in Moscow. G: MALENKOV too? S: Yes. I was told that he had been seen there recently. KAGANOVICH lives not far from VARENTSOV, on the Frunze embankment -- he often walks along the embankment with his wife and can be met there. MOLOTOV is very ill at the moment. G: He is in Austria? S: Now he is back. He was in Mongolia, in Ulan Bator. G: Then they sent him to Vienna. S: Yes. Now he is in Moscow. He is very ill and is under treatment. MALENKOV is in Moscow. SHEPILOV often walks along Gorkiy Street and was seen not long ago. He looks flourishing and is well dressed, they say. I saw him also. Where they work I do not know. G: How about KIRICHENKO? S: He is retired, in Kiev. G: And ZHUKOV? S: He lives in Moscow on Granovskaya Street beside the VOYENTORG and opposite the Kremlin hospital. Marshal SOKOLOVSKIY lives there too. His is a large house with huge apartments in it.

(40) S: ZHUKOV lives most of the time at a Dacha out along the Rublevskiy Shosse. By order of the Council of Ministers he was given a pension of 550 (new) rubles. G: That's all? S: It's a disgrace. According to the regulations, a Marshal has no right to retire. He is listed as continuing to work actively -- like BUDENNY, who does nothing, but who has an office in the grey building on Antipievskiy Alley -- a house with a large tower. He has his office there -- a Colonel is his Aide. Sometimes he comes to large lectures -- I have seen him. He enters, works on Command Training. He has a phone to the Kremlin but he does nothing. He receives his full salary as a Marshal -- since the last reform he receives 1200 new rubles a month. G: Is he higher than ZHUKOV? S: Yes. VARENTSOV receives 10,000 old rubles (or 1000 new rubles). He received more but they have cut him down. The Council of Ministers decided to retire ZHUKOV. I saw the order -- if I had had a Minox you could have had a photograph of it! It was signed by KHRUSHCHEV, and witnessed by the Ministers -- GORKIN was Secretary of that time. It read, "The Ministers of the USSR agree to the request of G. S. ZHUKOV, Marshal of the Soviet Union, that he should be allowed to retire". A special resolution can remove a Marshal or create a Generalissimo -- and this was a special resolution. Then later there were similar resolutions on KONEV, on SOKOLOVSKIY and on TIMOSHENKO and like ZHUKOV, their pensions were set at 5500 rubles. But ZHUKOV had money, from savings. A minister receives 2500 rubles.

(41) The head of the General Staff receives 2000 rubles. The commander of a branch of service -- a Marshal of the Soviet Union

[redacted]

like BIRYUZOV of the PVO received up to 1800 rubles. VARENTSOV got 1200, now it is less -- everyone gets less now. KHRUSHCHEV said, "They have grown very fat. We cannot create intellectuals and capitalists like this .." and so on. But Marshal ZHUKOV -- He saved his money and as Minister he had a representation allowance. So he had his savings. A Marshal of Tanks -- a Commander -- received 1800 rubles. Such Commanders, Chief Marshals and Marshals of the USSR, or a Chief Marshal in charge of arms of service, ordinary marshals like VARENTSOV in aviation or tanks got 1200 a month. When my father-in-law died -- this is how I know this in such detail -- his wife received 75,000 (old) rubles. AtMajor General's widow got 50,000; A Colonel-General's widow -- 100,000; a Marshal's widow still more. Now if anyone important dies, the widow receives 10,000 -- not bad -- 100 new rubles! That is not a pension but a single payment to cover funeral expenses. My mother-in-law received 2500 (old) rubles a month for herself and for her son VALYA, the brother of my wife. Now he has come of age and gets nothing. The son of a dead general and she gets 80 rubles. She lives on her savings. She has 5000 (new) rubles left. This is how they save billions for rockets. Any complaints and the little bit will be taken away. But all are restless -- one says to a trusted friend -- KHRUSHCHEV should drop dead, the SVOLOCH, and that FURTSEVA should be drowned and we will kill that Minister ZVERYEV who has been recently made a deputy.

42. G: Do you know a General of Artillery, MUSATOV? S: I know many Artillery Generals but I do not remember him. G: Or Colonel SHUBNIKOV? S: SHVEINIKOV? -- He has just become Major General and is in command of Personnel. G: No. SHUBNIKOV. S: There is no SHUBNIKOV -- there is a SHUBIN. SHVEINIKOV, a Major General, is in the Artillery, is in command of the Cadre Directorate of the Ground Forces.

43. G: Do you know YASTREBOV and SERGEICHUK, who are concerned with the delivery of the arms outside the Bloc? S: The names are quite correct and exact -- there are such colonels. They work in GAU.

44. G: Do you know any of the people who have designed new tanks, artillery pieces, and so forth, and who have received prizes for their work? S: There was a great inventor -- DYAKONOV, a Colonel of the Engineers. He invented a good howitzer; he was from the conventional artillery. Now everyone has gone over into rockets. I know about ten of these people but I have forgotten their names. All their portraits, with underneath a description of what they invented, are in the Academy. There is a gallery of oil paintings of artillery inventors -- I could simply look at them and copy them for you. In the Dzerzhinskiy Academy there is a hall

[redacted]

73. S: GRU radio operator or driver. (K-126)

74. S: Why do you not want to receive from me tomorrow evening a signal to show that all is well? G: We want to know that everything is alright at work, as well as with you personally. S: If everything is not alright, I will turn up at the American or British Embassy! G: Don't run to an Embassy. S: Where to then? G: It is better to go to another country. S: How could I get to another country? This is something else we must think about. If I cannot go to an Embassy, can I stop a diplomatic car? I know the car numbering system. J: Let me explain. While the Soviet authorities do not have the right to enter an Embassy, they can stop any car, diplomatic or not. It is impossible to go from an Embassy to an airport. (G interprets.)

Dzerzhinsky Acad.y
Grizlov
Petrenko

(75) S: When I was studying at the Rocket Academy there was an important order and a number of discussions. One of our students, in the rocket faculty --there was already a rocket faculty, the 4th faculty of which the Deputy was GRIZLOV, who is now in DDR. PETRENKO was the Chief, a Colonel; now he is a General. The student went by the "UDARNIK' cinema; saw a foreign car stop and was asked in broken Russian and English, "Where is America House?" He said, "I know. I will show you ". And he got in the car, saying, "Go that way." The militia saw that the car had a diplomatic CD" on it and then saw a Soviet military uniform in the car. They topped the car as the first crossroads with a red signal; stopped he car and pulled him out. He was thrown out of the Academy nd was reprimanded along Party lines. This was done as an example o everyone else. All he wanted to do was to show them the way. he foreigners (in the car) were not detained. The foreigners ere going to America House, perhaps as tourists. G: Can anyone lp? S: Yes. This was one thing that happened. It would be alright if there was obvious danger, but to live there endlessly -- hat for? If I stop a diplomatic car, I should do so in a suitable place, like by the Ukraine where one goes under the bridge where the gate is. I know many places where one could stop a car without being seen by the militia; unless, of course, they were openly followed. Then I know that I could get to the American or British Embassy at great speed. I know,however, that they would not let me out of the country. They would nvoke an alarm that a General Staff Officer disappeared and all front ers would be closed!

(76) S: When I was at the Academy in 1952,an Air Force Colonel, who was an instructor in special training, went out of his mind. He went off drinking and neither his family nor anyone else could find him. He went to a friend at a remote place and caroused with women.

[redacted]

[redacted]

The Minister was informed and he ordered the frontiers closed. There was a special patrol, because they thought that he might try and get an aircraft and fly out. This was done as a precaution. Then he re-appeared. He was reprimanded, dismissed, and put on a pension. He was one of my instructors. Well, one would just have to sit in the Embassy and live.

77. G: Do you know the LOTKOVs -- father and son? The father is a Colonel and he was an instructor. S: I know him very well. He was an instructor, but not his son.

(78) S: Anyway, I do not think that this danger exists. G: But it is better to know beforehand what to do. S: Of course. J: The point is this -- we consider him ours. There is no question of that. The fact remains that the Soviets do not. The fact also remains that we do not have planes that fly in regularly. Even if we did, only the Embassy itself is considered extraterritorial. It is not that wedon't want to help! (G interprets) G: My advice would be that if you suspect anything, you should try -- together with your family -- to get to East Berlin under some pretext. S: They would not allow it. If a thousand tourists are going, they check ten thousand and reject nine thousand. H: The point is surely this, to take it very realistically. If they know what he is doing, they would not give him the opportunity to get to an airport. But if he feels that there might be some suspicion, which they cannot prove, then he stops immediately in order to allay their suspicions. If they know he is not going to get a chance to run away anyhow. If they are suspicious, he must stop work. (G interprets.)

(79) S: There can be no question of going to an Embassy under any circumstances. They would catch me immediately. But if, in the case of danger, I could stop a diplomatic car at some favorable spot...G: Then where would you go? To the Embassy -- and then what? There would be discussions and so forth and they would demand that you be handed back as a Soviet citizen. It is better to devise beforehand a plan for getting somewhere to safety by secret means -- to a frontier, the Finnish frontier,whichever is nearest. J: George, I think this has a bearing on a very important point. This is why we have been stressing from the very beginning that security is the most important factor. We would rather not see him or hear from him for one year than risk his neck in any way. (G interprets.) S: How can I endanger myself? I shall photograph so carefully that no one will know. I will

[redacted]

[redacted] Meeting 16 5 May 6, 1961 -

135. S: A KGB officer (T-46). This is an excellent photo group.

136. S: A GRU officer who now works in the Information Directorate (T-47).

137. S: A GRU Strategic Intelligence officer (T-48).

138. S: Now works in my group of 58 under ROGOV . A naval man. He finished at the Academy with me (T-49).

139. S: A Strategic Intelligence GRU officer (T-56).

140. S: A Strategic Intelligence GRU officer (T-58).

141. S: A GRU officer who now works inthe Information Directorate (T-62).

142. S: This is MELIKH (T-63).

143. S: This man now works in the Operational Directorate of the GRU (T-66).

144. S: This man is in the Information Directorate. (T-67)

145. S: ZAZULIYA. He was thrown out and now he is in Afghanistan as assistant to Vasya POKIDKA. He finished at the Academy with me. He is in the Air Force. He was in India. J: Yuriy? S: Yes (T-75).

146. S: A naval officer who finished at the Academy with me (T-77). We have gone through my whole class it seems to me by now.

147. J: These are all. S: Yes, this was a fine set of photographs. (This ended the operational phase of the last meeting.) S: If this ends everything for me tonight -- tomorrow I will run in to say goodbye for just a few minutes. I will be here at 1015 exactly.

148. Toasts in wine were drunk to Subject; group photographs were taken with a Polaroid camera with Subject and one of each participant individually.

149. S: I believethat in this first phase of our association wehave worked intensively and have achieved productive and valuable results.

[redacted]

#16

150. Subject discussed Georgian wines such as NAPEREULI, SVILULY, etc. and said that KHRUSHCHEV had ordered these names to be discarded andreplaced by numbers since all the Georgian names were those of princes.

151. S: There is a very nice girl here at the hotel but I had no time to get acquainted with her. Here is her picture (her name was Valerie Williams, one of the hotel receptionists). I asked her if she had a photograph of herself. She said, "No." So I gave her £5 and asked her to have her picture taken. G: Just for memories sake. She took the money and this morning she gave me this photograph and wrote this nice letter. She explained that it is forbidden for employees to go out with guests andshe sent her best wishes. You see how I spent the last of my pounds!

152. A toast of best wishes for success and for Subjects well being and security was drunk. J: Now bade Subject farewell since he was to leave early in the morning. Subject embraced J (which gesture was repeated next morning for the other three participants). Subject carefully packed the various items he was to take with him after they had been checked. Subject put all compromising material in a coat pocket.

153. J wished Subject"all the best" on behalf of his government and himself and stated that these meetings would be only the beginning of a long and fruitful association.

154. Subject stated that this association would continue until the end of his days and hoped that allwould meet again. He said that he was now completely at ease. He added the request that he should be protected and promised to fulfill all his missions.

155. Subject departed at 0045 hours on the 6th of May 1961.

YOGA Meetings Second Phase - July - August in London

Meeting No. 18

YOGA arrived alone, without delegation, in London in the morning of 18 July at about 09.45 hours. His arrival could not be spotted since he did not travel via the AEROFLOT TU-104 jet directly from MOSCOW which normally arrives at 10.30 hours. He arrived on an earlier plane. Upon arrival YOGA contacted TARRY and told him that the Soviet Embassy had booked him a room at the Kensington Close Club. Upon receiving this information from TARRY, MIKE booked a room at the same hotel and John Collins offered the use of his flat as a meeting place. TARRY informed subject that he should meet MIKE at a rendezvous point away from the hotel at which point MIKE picked subject up and drove him to the vicinity of the meeting place. Subject arrived with MIKE at 20.20 hours on July 18th. Upon entering, subject greeted the other three officers individually and stated that all was well and normal. He also mentioned that his wife cried because she could not accompany him to LONDON and that he had brought some MOSCOW vodka for us but MIKE told him not to go back to his room to get it at this time.

2. S: Next time I wish you would control the visa appoications better. The entire delegation submitted visas to the British office on 11 July and the visas came too late for us to take the plane for which we had tickets. Just before we were to go and while waiting to get our delayed visas, KHRUSHCHEV reviewed the declaration of the Council of Ministers of the U.S.S.R. which was made on 1 July. This declaration authorised forty to fifty selected industrialists and scientists to go to LONDON during the time that the Soviet Exhibition was in progress and actually forty-four including myself were selected to go, but all of these trips were cancelled when KHRUSHCHEV reviewed the Declaration. Have you not seen the Declaration? I photographed it. G: Not yet because it is now being developed. S: Oh, I see, I will tell you about it.

3. S: I have received a nice little room but I thought you would be staying at the Mount Royal and we would be there. G: It is better to be here, since you have no legend to go constantly to the Mount Royal Hotel. S: If I had received my visa on time I would have come here alone and would have met you on Saturday 15th July. G: Why did not your people submit the request for a visa a day sooner? S: You were not correctly informed. Your secretary in your Visa Office received a request for visas from our Ministry of Foreign Affairs on the 11th July. This included a request for my visa and ten other persons. G: That is not correct. I know that he received it on the 13th. S: Even so did you not get my cable on the 11th? Then you could have checked on the visa. G: We received the request for a visa on Thursday afternoon the 13th. And it would have been unusual to grant a visa earlier since no-one gets a visa in less than forty-eight hours. x G: Nevertheless, it would have attracted undesirable attention.

4. S: Well anyway, KHRUSHCHEV revised his Declaration. I will tell you about it because it is on four frames of film.

5. G: How long are you planning to stay? S: I have been authorised to stay for three weeks. G: Whether the delegation came or not? S: Yes, either way. I received my visa on the 15th and my plane was due to fly on the 15th, but I could not fly out when I got the visa. The Embassy begins work at 1000 hours and I got my visa about 14.00 hours. G: That is right. The visa was granted only in the evening on Friday.

6. S: Here is my authorisation for coming here from the C.N.T.K. (Subject presented the document, requested that it be photographed and returned to him. He pointed out that this document was for the entire delegation of which he was to be the head. He pointed out that it was

/signed.....

x S: The group requested visas, not just I alone.

APPROVED FOR RELEASE
31 MAR 1992

signed by SAMARIN who was the Deputy Chief of the Committee and that the new Committee Chief was RUDNEV who had replaced KHRUNICHEV. ALEKSENKO also signed the document, another Deputy of RUDNEV).

7. G: And who has replaced that biggest chap? S: RUDNEV, Lieutenant General, Engineer of the Technical Service (Inzhener Tekhnicheskoj Slushby), An Electronic expert, who has been occupied all the time with defence technique [oboronnaya tekhnika]; about 54 years old, energetic, not all that bright, he replaced KHRUNICHEV. G: Do you think that will be better for you? S: No. KHRUNICHEV was more intelligent. KHRUNICHEV was better for work. But for me - well, yesterday he called me in and said....well, I'll tell you in detail in a moment. Well, he set me the task, which we are to do together, before our meeting, my dear friends, that's all. Well, I didn't think I would come.

8. S: I thought to-day that the film would be ready, because it is very important. It is very important. G: It will be, it will be. This evening. S: I've already managed to get into such a larder! [Kladovku]. You can judge it by the material. It is the latest, the very latest views for 1960 and 1961 on military doctrine, on matters regarding the utilisation of tanks, the fleet, the Air Force, the doctrine in general. G: They will bring it to us tonight. S: And this is where I photographed, first of all, KHRUSHCHEV's decree. So I'm checking the documents, I handed all of them over to you. So I want to relate the most recent events... and it could have turned out so that we would not have been together to-day! Now let us analyse what we are to do in the future.

9. S: On the 4th of July I was called to GVISHIANI, already I was the Deputy Head of the section, the appointment had already gone through, and he said: on the 1st of July a decree was passed by/Council of Ministers of the U.S.S.R. signed by KHRUSHCHEV, regarding the urgent, speedy assignment of 40 - 50 Soviet specialists to the Exhibition in London. The Committee appoints you the Head, the leader, in so far as you have already been in England, you have certain acquaintances, we are satisfied with your past trip' (to us: You did all this for me, despite MERRIMAN who did not make a meeting). S: GVISHIANI said "You are appointed the leader, urgently prepare 40 - 50 individuals including our own people". I said: "German Mikhailovich - what branches of industry shall we take? He said: "take chemistry, take light industry, metallurgists, machine constructors [mashino-stroitelej] and take the people who have already been in England, so that one should be able to get a visa for them quicker, and there is already an exit permit on record for them in the Central Committee which pokes its nose into everything; it will let them through faster, it will al be quite legal and correct". And I, together with my own people quickly prepared these groups.

10. S: We sent an application to the Central Committee - suddenly the Central Committee starts holding up. You see, we got the order on the 4th, and it was signed on the 1st. You will read it on the developed film to-day, with KHRUSHCHEV's signature, there it is written: "paragraph 1: ....second PATOLICHEV and his wife for twelve days.....paragraph 2 there: I don't remember it for the moment.....paragraph 3: that is what I told you about - it is entrusted to our Committee.....paragraph 4: PATOLICHEV is allocated 9,000 'foreign currency roubles'....paragraph 5: ....in case the Exhibition is visited by MacMillan and Queen Elisabeth the Second, presents should be given them according to the instructions and arrangements by the Soviet Ambassador. (signed) KHRUSHCHEV, Executive of Affairs."

11. S: So now we are preparing things. We are preparing straight away files, characteristics, photographs are being prepared in full, everything. Time to leave approaches - I've already - that is, a note was sent to the Ministry of Foreign Affairs regarding my first group - I was

/to leave.....

Meeting 18

again organise all this and do it, we need to have it done urgently, because it (the decree) was signed on the 1st, but we only got it on the 4th, and, by the way, on the KREML telephone. On the Government telephone, and this decree reached us later, when BREZHNEV signed it on July 5th, but as I told you we heard about it on the 4th."

20. I started worrying, I didn't sleep for three nights and even got thin! I thought, because you didn't give a visa - I would have left for here to prepare the programme for them, and to Hell with them! Let them change everything else while I would already be here with you!! So then on Monday they said the third paragraph had been revoked. Why had it been revoked? For two reasons: firstly a very strong impression was created by the Tartar who defected from the ballet while in France, a very strong impression. He was secretary of his Party organisation. So that you should know - Secretary of his Party organisation. He was chosen secretary by secret vote. Secondly, the people were prepared quickly, they were badly checked through the control organs, an exit permit was immediately demanded from the Section of the Central Committee and a visa was requested from you. And thirdly, what would the results be? Either the British would let them visit firms, or they wouldn't. And if they would not let them, then it would be a light entertaining stroll. And POLYANSKIJ managed to persuade KOZLOV to reconsider this point, and it was revoked. While I'd already got my visa! My passport had been brought to me, since the decision had been given me.

21. S: I want to - here is a cunning, intelligent manoeuvre - I came to SEROV, who saw me off this morning. I travelled with his wife and daughter. He saw me off this morning. In a suit like yours, only he had a star. But his wife and daughter are here in London, now. They came as tourists for twelve days, six in London and six in other towns. Tomorrow I shall be buying for them - I'll tell you more about it later. I shan't be buying it - we shall be buying it, for SEROV. (Laughs). So I came in and said: "Comrade Head of the Army, I was presented by the Committee with the leadership of the Committee, since they know that I am also a GRU worker and that I have interests in England, not only to carry out this work on the line of the Committee but also to fulfil our four tasks, regarding which I shall report to you shortly. There are four tasks which I have written down. My visa was granted by the English." My chiefs said: travel three or four times to the Capitalist countries. If you are recognised after having worked as a military attache and Chief Assistant in Turkey, we shall put you up for a prolonged mission. We shall see how the attitude of the Americans, British and French will be to you after you were a military type, but now are a civilian."

22. S: Further, this was taken note of in the section of the Central Committee of the Party, and they gave me permission. Out of the entire 44 people only I was given permission. They said: "Let him go!" Why? Because the Central Committee knows that I work both in the Committee and I work in the GRU. So it means that I have two purposes to go for. I said: "What right have we got not to exploit this opportunity, and not go?" I discussed this to begin with with General SMOLIKOV, and then with General MALIK. , you make this journey, along our line; does the Committee want to send you, or not?"

23. S: I went to this ALEKSENKO, this is ALEKSENKO - and to this SAMARIN - SAMARIN is the Second Deputy, he is Deputy Chairman (Zampredsedatel') - the second one, they have two Deputies now, ALEKSENKO and SAMARIN. I said: "With respect to the Committee line, considering that the journey of the Delegation has been cancelled, can I be of any use?" "Yes, of course, you can prepare. Within these groups there was a group of metallurgists, it will come to you there, we shall apply for visas; one of them is TIKHONOV." TIKHONOV is deputy of ZASYADKO, and ZASYADKO is the Chairman of the GosEkonomSoviet of the U.S.S.R. (Government Economic Council of the U.S.S.R.). While TIKHONOV is a metallurgist. He wants to come here for a month or a month and a half with a group, to visit a number of your big metallurgic firms. They should come for ten days - each

of Ministers of the U.S.S.R. When this group of TIKHONOV's was being planned, they wanted to show him the Edgar ALLEN firm and the firms, that is where MERRIMAN and McBRIDE are. And I was ordered to attach MILOVIDOV to the group of TIKHONOV's, when it arrives, and to warn SOLDATOV, i.e. the Ambassador here, the Soviet one, that TIKHONOV is arriving. TIKHONOV is a friend of SOLDATOV's.

33. G: MILOVIDOV is to go on waiting here all the time until they arrive? S: No, MILOVIDOV is leaving when the exhibition closes. G: He will come here afresh then, with TIKHONOV? S: No. Perhaps I will come with TIKHONOV. If TIKHONOV's group were to arrive now, MILOVIDOV would work with them. is general organiser, the Chief. I cannot travel with TIKHONOV, I can only direct (guide) everything and arrange everything, after that they can travel without me - why should I? TIKHONOV was invited by Mr. WEARING who is the Chairman of the Committee of Ferrous Metallurgy R.E.E.K. and he is the Managing Director too of the concern GUEST KEEN CO. There is a concern in England, GUEST KEEN Co., and the Managing Director of this concern is Mr. WEARING. This WEARING has invited TIKHONOV, when he was in Moscow at the Exhibition. Here I've got written down ARUTYUNOV Nikolay Bagaratovich - this is also a member of the Delegation of TIKHONOV. At present, so far, a group has been prepared consisting of seven people. This Nikolay Bagratovich is at present the Head of the Information Directorate within our Committee. ARUTYUNOV. He is also coming. So that so far a group has been prepared in accordance with this decree, and consisting of 7 people.

34. S: I was well instructed in photography. Perhaps there are some flaws. But I am cross with my camera. One of my Minoxes, when I photograph at 45, 46 and to the 50th frame, it goes very stiffly, it pulls. So that I ask you - in my notes here - you see the notation - invite a photographic instructor, I have several questions for him. G: We will do this.

35. S: Now, as regards this group of TIKHONOV's, it will arrive here to you - or rather, we shall ask for visas, and whether you grant them or not is your affair. I think that he should be granted to visit some firm. Perhaps I will come - one cannot tell. TIKHONOV's attitude to me is very pleasant. My stock was raised by GVISHIANI. I swear to you by my daughter - my beloved only one, and her mother - that when I left from here I presented GVISHIANI's wife with some marvellous scent, powder, lipstick, a packet of cards and several packets of cigarettes. I gave presents to everyone, I

calculated that I had given presents to the value of about £80 - £100. And when I travelled this time - even RUDNEV told me to bring him batteries of 12 volts. These are the Soviet leaders for you in their form! I shall speak to you later in more detail about this.

36. G: How about October and your possibilities for coming? S: As regards October, it's like this: I've just been very cunning. We already applied to the Central Committee with a proposal - I sent it, the third quarter - I passed on via the lady what specialists were being planned. Well - did I work correctly with this lady, or not? H: (in English) You stayed a little bit too long with her. S: Excuse me, I also am a clever man. It's impossible to sit, give and vanish. It is impossible. The lady is sitting, rain is approaching. A pram. She is holding all three children. She is again dressed in the same brown suede jacket, so that I should always recognise her. I appraised the whole set up, the rain is approaching, I on purpose waited for rain to begin, so that as many people as possible should leave. The place is bad. (It would be better) to go further towards the edge there, there would be fewer walkers. She was sitting beside the path opposite the circus and cinema. Everyone goes and sits there, when it is sunny there isn't space for a sardine there! People all round. But further in the square it's empty. The rain was approaching, I thought: let the first drops fall, then I'll approach her.

37. S: (Goes on to describe contact, says lady had no news for him and was not there the following Sunday, the 9th, although he would have had a message for her, as GVISHIANI had already informed him on July 4th that he, S., was ordered to London, and he could have passed this message on via the girl; he goes on to say that she had understood him despite his bad English, only MERRIMAN does not understand him! He will improve his English. He goes on to say that the British need not have feared the intervention of the Militia, as he, S., has his red book, and would have told the Militiamen "shove off, scum", would have let the girl go and then he himself discussed the matter with the Militiamen. The British are the leaders and mentors here, but over there he knows what to do. Goes on to describe departure of lady with pram and 3 children, and that he noted that all was well).

38. S: And how could I know that all was well? You could only inform me of this by wireless in a week's time. Now that you have passed in the message to me the fact that the carbon was wrong, I read the whole thing correctly, yes? G: Yes, yes, it was perfect. S: Without errors. And on Saturday, the day before yesterday, you sent me the same message. What for? On Saturday I again received 41 groups - what for? What do I need it for? G: Because .. S: I don't understand! G: Of course you understand. Just think. Every Saturday and Sunday during the course of a month this is being sent to/you the chance to listen whenever best for you. S: And do you think give that I would not have listened for it at once? G: (Explains again why repeat messages are sent). S: (Goes on to explain that he has made some three mistakes in decoding but found the errors. Does not find it too difficult. Nor does he find receiving too difficult. Before his departure he hid everything in a secret place (tainik), having first packed it all up. Complains again about receiving the same cyphered message of 41 groups twice. Reverts to his contact with the woman and calls her a heroine - she was most natural, didn't even start. Says it was quite correct and natural that he should have chatted to the children - otherwise why should he have approached at all?! etc. It is explained to him that it was all right once, but would not be a good thing often, if they have to use her again, the briefer the better. Subject says it would be better to meet further left in future, as there are less people there - not by the kiosks).

39. S: Now there is another question: why don't you - well, I go to receptions, to the Canadian Embassy regularly, as you know, the Americans don't invite me to the Embassy, although I have already met Americans - the patent chaps came for a visit, 6 of them; a furrier came for a visit, about whom I wrote to you. I also got acquainted with some other American. And no-one invites me! And I'm the deputy head of a section - there was the

big American day, I thought I would be at the reception, when there were several thousands present, but I wasn't invited! (J. explained to him that the American Embassy called his organisation and asked for a guest list, his name was not on it). S: Well, perhaps that's because I'm young and a new worker. (Agrees that this is the best way to issue invitations, remarks that he has also never been once at the British Embassy, as yet, but has been thrice at the Canadian Embassy). The Ambassador Smith, his wife, three children, FURTSEVA was there, KHRUNEV was there, and I was there too. So I go to the Canadian Embassy. As regards the American and British Embassies - I'm quite clear about it now. But perhaps that will also develop gradually.

40. As regards the lady, we've finished that. I request that she takes up her position in future further away from populous places. G: Now that you know her, the matter is quite different. H: Now that she is in England, you can meet her here in a short while. S: Now I have an idea - I would ask you to analyse this matter and solve it scientifically. Why should this lady not be invited to the Canadian Embassy, say, to a reception, so that I could become officially acquainted with her at the reception? Then I could meet her quite openly in the street, as I would come up to Ambassador Smith, if I saw him in the street, for a chat, never mind if there are 100 militiamen present! (It is agreed that such a meeting could be arranged).

41. G: (Explains which carbons should be used for S/W, of those now in S.'s notebook). S: I have written a strip in invisible ink there. I copied it out of there, but all the other formulae I have also here in ink on the slip of paper I sent you. (He had not written through the carbon, but the neighbouring sheet of paper). S: When you gave me the black notebook, there was a black partition sheet ..... and you told me, the three sheets lying behind it are the carbons, three in a row. G: No, no..... they were the second, fourth and sixth. S: I didn't understand that. .... When I asked for a large sheet like that, you gave it to me to begin with, and then you withdrew it. You told me: there is the cover, then there is a black sheet, an insertion, the first three sheets after that are all carbons .... I opened it, took out the first sheet, put it underneath, wrote very clearly - I sent a copy later - it was used later - everything turns out well for me, thank goodness I didn't destroy the carbon, I wrote through this sheet of paper, and I reckoned that the two sheets that remained were also carbons. You told me - all three sheets are carbons. G: .... the real carbons were the 2nd, 4th and 6th sheets. The 1st, 3rd, 5th, 7th, and so on are not carbons. S: And why is this so? G: It is to protect the carbons. ..... So I informed you by radio: you did not write with that one, the first; take the following one, because I knew that your No.2 was a carbon. S: When I get home I'll re-arrange them so that I have the carbons one after the other, so I don't mix them up. (They go on repeating the same thing over again). I copied from there, but all other designations and formulae I have destroyed. So I have such a strip left - and why? Because on the opposite side - I didn't re-write it for you then, I kept it - and all the rest I've destroyed. (Referring to the slip of paper with notes which he gave us).

42. G: But what was it? S: There were: all the conventional designations which are used in this technique. Then the conclusions from SALKOVSKIY's formula for reactive raw material (reaktivnoe syr'e), there were several formulae. That's it. And I destroyed that, but I left the strip for myself, as I didn't remove the diagram describing the places during a rocket flight. That I kept, I took them, that is the last that I have remaining of all the tens of sheets - almost a hundred sheets - that I copied 'by my own hand', when I was on the courses.

43. S: Yes - how did my documents come out - all right? G: Yes, perfectly. S: The quality is not bad then? G: No. S: I got scared - why had I written - that thing I gave to the lady - four films - I think I stretched the photography to the very last frames. Did you get the materials

regarding BEKRENEV's lecture? BEKRENEV's lecture turned out well? G: Yes, very excellent. S: I photographed the second lecture, finished the film, wound it to the dots, started taking out the film, at that moment there was a knock on the door, I moved everything and it all moved onwards from the dot, and I trembled, my heart ached, because afterwards I did not click it fifty times, I had not time to put it back to zero again - I took a new film and put it in, while I hid this one, and continued photographing. And when I got to the 45th still and then to the 50th it was very stiff to turn, I really had to use force. I wanted to change to the other camera that you sent me, to the second one. Here I made notes there as to what I had to do, how it should be greased and such like, and I have questions for him, the photography instructor, let him come to see me. Because when working it's like this - telephone calls - one has to stop - you may have seen, I have even photographed some pages twice, because I wasn't sure whether I had turned the page or not. Is the manual all right, or not? G: Excellent. S: It was the year 59. The thing is, to get into that larder - G: Where did you get it from? S: From GRU. All GRU.

44. S: Now please write an article for me because I am very busy, and then I'm too tired to write anything for the Soviet Regime. When I received permission to look at the material it was for background for writing some article - that will be my cover story, then I shall open up such larders in the secret section! G: How can you account for the sources of data in such an article? S: Quite simply. We receive masses of open military journals from you, from the British, from the French. I finished two Academies. For the third time I am today on a mission to a foreign country, if I want to be clever, if I am a military strategic intelligence officer, if I absorb like a sponge everything that goes on here, I read, if I work - I am not working on that at present, I should be able to do this but now I have enough other work for the present for the Committee, for GRU, and our basic work - I didn't start in the right order - our basic work, GRU and the Committee. I get tired, I come home and fall into bed, I fall asleep, in the morning I do my gymnastics, eat and go out. And then afterwards I, in order to write something - I had small inventions, I proposed an Artillery angle measuring device, I shall tell you about it in detail later, you know, before, when I burned with the courage of an eagle, I wrote in the papers a little. Why should I not, if I sit down in front of all the material which we get through our Intelligence from you, such as the regulations through Ceylon.

45. S: By the way, how was that list, good, or not - of the agent network? H: All good, yes. S: Aha. We get the materials from there, we shall upset this agent operation as if they did not exist. We get (this) in our Information Directorate (headed by) KARPENKSKIY Lieutenant-General, who received a promotion - did you get the report about so many Generals being promoted? G: We received it.

46. S: Why should an intelligent officer not sit down, draw general conclusions and write about the opinions of the Anglo-Americans, for instance, in regard to artillery. Let us say tanks. But I myself am a General Staff officer, I can take any doctrinal subject, any question of doctrine, chew over it and give my own views in these secret articles in the journals such as VOYENNAYA MYSL and VOYENNYY VESTNIK. G: But won't they ask you "Where is your source?" S: But you must give me the sources - journals - you give me the bibliography - I asked about it. You indicate what I should use. G: You see, they will ask you "Where did you find it?" S: You give me a list of the bibliography regarding that which is printed openly, without the secret stamp, and I will look at all the libraries, all that is superfluous that you give me I will strike out, and will leave in that which is required. Or if you like I will send you a bibliography, and you write me on the theme - on the basis of this bibliography - your expert can write it so that it would appear logical that a 42 years old, (finished) two Academies, travelled abroad, has for eleven years had experience in intelligence, could have done it. G: That would be much better. S: I'll give you the bibliography. G: That would be much better.

S: We have tons of military journals from all countries. G: That is important, if you can say that such exist and you used it as source material. S: Well, we must come to an agreement during these 21 days. G: If an item of interest is found they may order you to produce the source.

47. S: Well, to begin with I shall review it, I shall write it all down in my working note-book, I shall think it over, don't worry - understands. I shall put in that to which I could have had access. And we do have access, through our intelligence, through secret literature which we steal by means of our agents, and through open literature which you very open-heartedly write! And we have tons of it - like this - right up to the ceiling - journals, just sit down and write! Think, gather everything! Gather it - on the subject of tanks, on artillery, on general views - infantry, and so and so, and so on - aviation - navy and - it would be logical, there is a lot of material. I would ask you to do this, and if I get into print with it once - and you'll get this article! - if it is printed in a journal, they'll say "What is this?" I am on this trip right now - they consider me to be intelligent for their use. Why do they still keep me in spite of my father? You don't know anything about my father, do you? G: No. But I will inform you if I find out.

48. S: They know that I can work, they taught me, a fool, for many, many years. They say I have initiative, am gifted, quick on the uptake - they expect a return from me. And if there is no return, then they will say: "That means he is slipping, he no longer has a future." I don't care what they say, in any case I shall be with you in two years' time. If at least I have something printed which is only several pages long, an article reflects good thinking, I shall then say: "I have had this printed, I want to produce something else now, I have more thoughts, ideas are coming to me! I must express them" I will tell them that. "I must read what our views are on such and such a subject" - and when I read I take photographs of it all! All those journals which were brought just now - tomorrow you will say to me: excellent chap!" After rockets this goes as No.2 in importance. I value rockets very highly, the information I gave you. I value it very much. These are the originals, that which we studied.

49. G: Will you have access any more to rockets? S: I shall have, I shall have. Yes, I was promised - I spoke with VARENTSOV - I said: "Sergey Sergeevich, I want to write something about anti-tank artillery, like for instance the type which the Americans have."

50. S: By the way, gentlemen, this thing of yours is working, isn't it, because it is very important to have this recorded. I shall just touch on it, later I will go into detail.

51. S: In connection with these events in Germany, Berlin, our Command must pay special attention to anti-tank defence. Special attention. Why? Because two tank armies - armies, that means consisting of regiments, brigades and two corps, that is an army, plus all auxiliaries. Two tank armies on the territory of the East German Republic (GDR). Check it through your other channels - two tank armies, ready for action on the territory of the East German Republic, not taking into account the tank armies, also armies, which are in the second echelon on our territory, in our forces, on the contiguous borders, and also in Czechoslovakia and in Poland.

52. S: And at present KHRUSHCHEV is carrying on a very cunning masked policy with his General Staff; he is putting much emphasis on tank forces. The tanks will have cannons and rockets on them, there will be machine guns on the tanks. So that our task will be to bring our anti-tank artillery to the highest state of perfection now, and to have anti-tank forces in each infantry section. I have in mind bazookas, and so on, and so on. These things must be available. They must be trained daily, like violinists being trained to play the violin, daily. So the troops can use direct fire daily over open sights. If our anti-tank forces will be at a high level, and his massed tank forces advance across the lines of communications, which will inevitably happen - we will talk about this in more detail later - and a very great many tanks will be built in the future. To the detriment of the artillery.

53. There is a battle going on at present between the Commanders of the Armies - why are you giving so much money to the tanks? While rockets and electronic science should be increased, and so forth. The emphasis is on tanks, emphasis on submarines, rockets. Aviation, that which he showed, that's a spectacle. These aeroplanes exist, they are not yet all in mass production, some are in serial production, but very few. I shall tell you later, of which there are more and of which there are less since that is known to me. For this reason, immediately - the Berlin question, after the signing of the agreement, they want to blockade the approaches with tanks - the whole problem - that we should - if we hit them hard in the teeth - I am saying this now, I'll say it in more detail later - he wishes the nature of these battles to be localised, but we must hit them so hard that they all be destroyed. For this reason the anti-tank forces must be raised to an as yet unheard-of level now. We must increase anti-tank forces, rockets, conventional artillery, bazookas, mines.

54. G: You think the demonstration was intentional? S: Yes, it was a parade, a spectacle. Some of our generals said: "We shouldn't go to look at this, we want peace, we keep on talking about peace, while there they are giving a demonstration of force." I heard this with my own ears. But these aeroplanes do exist. But the aeroplanes do not as yet compose air armies. Squadrons, so far. G: But do you think there is perhaps this tendency - to show these aeroplanes so that the West should also turn to more aircraft production in competition, and give less attention to rockets, so to speak to appropriate more money for aircraft rather than rockets.
S: He would like that, but he does not think that we are as naive as that. He knows that this will not work. G: But do you think that it is possible there was such a tendency? S: No, and in two or three years, those aeroplanes which he demonstrated now and the secrets which he showed, there will be many, many squadrons of them. They will be produced like sausages.

55. S: Tell me, this carbon which I brought, the one I worked on, can something be got out of it with the help of ultra-violet rays? G: No.

56. S: I got your radio message, every word of it. Was it exactly as you said? G: It was perfect, you got the full message. The only slight error was in the abbreviation for beginning. You read it as NASh instead of NACh which makes no difference at all. The message also probably straightened out in your mind that you used the wrong carbon for SW.
S: I could have written up the material in overt text just as well but I simply wanted to try out the SW system. By the way did you receive all my filmed materials? G: Yes we did and it all came out fine.

57. S: When I told VARENTSOV that I wanted to write military articles he told me to use his office, that is the office where GOSPE sat. You probably read what I wrote about his death when the helicopter crashed?
H: Yes, we got that. S: I am just checking to see that you received all my material. It is so good that Mr. KENNEDY and Mr. MacMILLAN have declared such a firm stand, this has created quite a panic there. Later I will go into details but right now we are just expressing general views.

58. G: Now let us consider a matter of the greatest importance for all of us and particularly beginning with the report which you yourself sent to us about the Berlin situation. Possibly you can expand on and clarify many details of your own report; for example who else was present when VARENTSOV made his statement you told us about? S: Gen. Major Andrey Romanovich POZOVNYY with his wife and I was there with my wife Vera and that is all. The occasion was when he invited his very close friends to his dacha for a drink as a consequence of his having received the rank of Chief Marshal. By the way did you get FEDOROV's photograph? H: Yes we did.
S: You see the existence of the four brigades was confirmed and I gave you the deployment area of the First Brigade. Storm groups should be organised to prevent these brigades from moving out of the towns where they are. This is something Mr. STRAUSS should work on.

59. H: I think we'd better start on the questions in the proper order. Q: to S: We have an agenda here and the questions have been placed in the proper order of sequence so let me ask you these in order. Here is the first one; what new developments do you know about in the Soviet position on the BERLIN question since the time you last reported? For example, what is the present Soviet position, what action have they taken and what is their plan?

60. S: I understand. The Soviet position as I have reported to you is as follows: first of all if it were possible to deploy a huge army on a wide front using only conventional weapons and no rockets with atomic or hydrogen warheads, there would probably be mass defections to our (the West) side. I mention this as a preamble to the situation. Q: Is this your view or do VARENTSOV and others share this view? S: This is a general view because our situation at home is rotten. They don't trust KHRUSHCHEV, they don't trust the Soviet Government and the people remain half hungry as before. The people are very displeased with KHRUSHCHEV's militant speeches and they say this audibly since it is easier to express oneself now that BERIA is gone. The current belief is that, thanks to KHRUSHCHEV's militant speeches, KENNEDY, MACMILLAN and De GAULLE have been forced to increase their armament programmes by two or three times. If STALIN were alive he would do everything quietly but this fool is blurting out his threats and intentions and is forcing our possible potential enemies to increase their military strength. They dislike him and say that he is hurting his own cause and that he talks too much about Soviet military accomplishments in his effort to frighten the Western leaders.

61. S: With this thought in the background in the present situation we (the West) do not wish to repeat a second Egyptian fiasco. We should react with firmness if he blocks the access roads to BERLIN, those blocking forces should be smashed and without striking with atomic weapons at industrial centres or rear areas. Should he attempt to do this then he should be repaid in kind and the whole world told that the West is protecting its vital interests which KHRUSHCHEV had trampled upon in violation of the Potsdam Agreement signed after World War II. If he expands the conflict to some degree then he should be answered with corresponding counter blows. Actually KHRUSHCHEV and the Soviet Army at this time are unprepared for this.

62. S: Now, what new developments took place since I last reported? KHRUSHCHEV is personally pressing the Central Committee of the Communist Party in two directions; the first is to establish and perfect a mass production programme of all types of armament, specifically rockets, aviation and other similar means. To implement this the workers of the Central Committee and the responsible Ministers are actually physically present at the respective production centres for which they are responsible. They are, for example, at such cities as GORKI which should be intensively bombed. Near GORKI is a town called SORMOVO. At this place there are extensive yards where submarines are produced. There are wharves, dry-docks and shipyards there. In addition, before I forget, there is a huge aircraft production centre which is building the Delta type bombers and fighters which you have seen, or maybe you call them swept back wings - this plant is located at DNEPROPETROVSK. Now this area has been declared a forbidden zone for foreigners, even the mines there which were previously visited are closed off because they desire to shut off access to the area.

63. S: What are they doing militarily? My old friend Marshal VARENTSOV is constantly travelling to the countries of Peoples' Democracies. Just prior to my departure to come here the extensive manoeuvres in Bulgaria were completed. Here is the way manoeuvres are now conducted. In every tank army and in every field army, that is mostly an infantry formation, one Division from the D.D.R. is included. The exercises are conducted just as large scale formations are trained but fully participating and fully equipped, one Division per Army from the D.D.R. also participates.

G: What type of Division is it? S: It is a standard D.D.R. Infantry Division which operates exactly as Soviet doctrine prescribes, and trains with the Soviet Army at all manoeuvres. G: Where does this take place? Is it with the Soviet Army only in the D.D.R. or elsewhere in addition? S: The German Division is included in the Soviet Army wherever the Soviet Army may run manoeuvres. This means it may take place in any country of the Warsaw Pact and also within the U.S.S.R. itself. This is a new measure which is designed to train the D.D.R. Army in tactics and strategy for joint operations.

64. G: How about Divisions of other Satellite countries? S: Shortly after I left you extensive manoeuvres took place in Czechoslovakia which involved Soviet, Czech and D.D.R. troops which were training for joint operations. Marshal VARENTSOV was there and all of the Marshals of the respective arms of service. Therefore satellite armed forces are being trained for joint operations. The last big manoeuvre just ended in Bulgaria. FEDOROV went to KAPUSTIN YAR with one rocket battalion in June for training. When I saw him he told me that when the Soviet forces in case of hostilities have to deploy and leave their garrison positions in the D.D.R., they will have to combat all Germans. The enlisted personnel of the D.D.R. Army are very hostile to us. The top brass is well disposed to the Soviet Army because they are well taken care of, just as their top political leaders. However, the enlisted man simply hate us and if we can't deploy in time they will beat us down with stones and rifles, and they will execute all kinds of sabotage. I wrote this up for you already. In other words if communications were cut, the isolated units would be trapped. I did not give you all these details for lack of space, so I want to tell you about it orally.

65. S: FEDOROV told me that the existing supply dumps for artillery were not adequate for storing rockets and that larger protective storage structures were constructed. These were both higher and longer than normal structures and could be easily spotted. There are so many German spies in the area that not only did they detect the rocket storage units but in a number of cases sabotage by puncturing the rocket shells took place. I wrote about this, upon filling the rockets with fuel, extensive leaks were discovered and these rockets were sabotaged to make them impossible to use. FEDOROV said that diversionist spies sent by West Germany were responsible for this. FEDOROV also said that since the Soviet Government will not allocate funds to rebuild artillery dumps, improvised shelters must be constructed and these are impossible to camouflage. G: Were there many cases of this kind? S: He told me that there were two or three cases of sabotage in his brigade. Similar cases were found in other brigades and he again repeated to me that there are four rocket brigades in the territory of the D.D.R. G: When did this take place? S: Only recently, in May.

66. S: Another thing I want you to check which I have reported is that in addition to KAPUSTIN YAR, Soviet rocket forces deploy near ODESSA, where this aeroplane crash I wrote about took place, have impact areas in Rumania and in Poland and they are test firing at those areas. The exact location from where rocket firing takes place is not known but it is from the ODESSA Military District. Another important bit of information told to me by Colonel BUZINOV, who is now the A.D.C. to Marshal VARENTSOV, is that joint operations in various types of military manoeuvres will take place throughout the entire year. Satellite armed forces will participate in these manoeuvres and the particular emphasis is to develop the combat readiness of the units belonging to the D.D.R.

67. S: Before going to the next question, I must say that VARENTSOV looked extremely worn and haggard when I saw him that Sunday, and in addition to the burden of responsibilities as Chief Marshal he shortly expects to be the Commander in Chief of all rockets in the U.S.S.R. They expect to replace MALINOVSKY as the Minister of Defense by GRECHKO. GRECHKO's Deputy will be MOSKALENKO, and VARENTSOV will be in charge of all rocket forces, that is, not only will he have the rockets and artillery of the ground forces of which he is now the Chief, but in addition he will be in command of the joint Headquarters of tactical rockets and strategic

rockets which are now under MOSKALENKO. I wrote this up for you; and there will be some twelve Directorates in this new combined Headquarters which will be all under VARENTSOV. He will also be in charge of PERKHUSHKOVO I told you about. This has been given to VARENTSOV even though the Minister dislikes him and many Marshals are envious of him. Quite frankly, though I have a great personal regard for him, he is not a deep thinker and has educational limitations. However, he is one of the best artillery men and they want him to be in charge of both tactical and strategic rockets.

68. S: to G: You will give me a plus for this, I just remembered that I found a classified article by your friend Lieut.Gen. KOCHETKOV. It deals with the creation of an operational directorate in G.R.U. I remember last meetings I was not very convincing in my explanation of this directorate. (S. misread title of article which actually spoke of the eliminations of inefficiency in operational intelligence and military intelligence, and not on the creation of an operational directorate). In addition there are a number of other very important articles here including those by VARENTSOV and ODINTSOV and other prominent military leaders. I am very happy that the photography came out clearly. H: This is a special issue of articles in VOENNAYA MYSL. Are these more secret than the ordinary issues? S: This is absolutely Top Secret and I will now find the sheet on which the classification is clearly indicated. (S. continues for some time to examine and to remark upon the articles which he had photographed).

69. S: Publications of a Top Secret nature previously issued by the various branches of service are no longer handled in that manner. They are now incorporated in a group of articles and published in a Top Secret special issue of VOENNAYA MYSL and in VOENNYI VESTNIK. I have photographed a number of these articles in toto and those were the ones which seemed to me most important. If you will examine the table of contents please tell me what others you wish photographed in their order of priority. (S. read all of the article titles and list of authors and emphasised that these articles reflected the current thinking and military doctrine of the Soviet Army. He also noted that enquiries or remarks concerning any of these articles must be submitted directly to the editor of the publication only through classified control channels).

70. S: I request that you have all this translated and turn the material over to your military commanders since the substance of these articles is of significant current importance. Even the word rocket is used here, not the camouflage word assembly of some kind or other and you will also note that there are now types of rockets with their designations described here. What I would like to do with all of the materials that I have passed to you is to re-examine them after you have processed them and have prepared a list of questions requiring clarification. At the same time I will be able to check the quality of my own photography.

71. G: What did you say that the position of General POZOVNYI was who was with you when VARENTSOV made his statement? S: He was the former Deputy to VARENTSOV for political matters. Now Deputy to BIRYUZOV.

72. (S. insisted on showing an article which included military estimates of the NATO Powers' military weapons to indicate what their intelligence was able to produce. While reading S. emphasised that he spotted three new rockets, the R-30, R-170 and the R-300, remarking that the R-300 designation was equated to the range of 300 kilometres. S. also referred to tables of Western powers, specifically U.S. rocket capabilities for a given sector of combat operations. The numbers of available rocket weapons of various calibres and the rate of fire was indicated. S. stated that these tables should be checked for accuracy and if Soviet information was correct then deliberate changes should be introduced in order to offset Soviet calculations of MOZh [Mathematical expectancy]. S. also mentioned that anti-missile missiles and their inclusion in a co-ordinated radar search net were described in one of the articles).

73. G: By the way how much time do you have available today? S: We still have time to work yet. G: We are concerned about your pattern of life here. Do you have to report to anyone? S: No. I am living all alone in a small neat room and I have not seen any other Sovietsthere. As you see from my documents I am my own chief and I can develop my business relations here with PAVLOV who is the acting Resident during the absence on leave of the Resident. I don't have to report to him. I have been assigned my own missions which I will attempt to fulfil and you may help me to fulfil some of them. All I need to do is to come back with a record of having accomplished my missions for both G.R.U. and the G.N.T.K. I have not yet told you about the G.R.U. missions but I will do so later and with your help I think I can accomplish all my missions.

74. S: The information I obtained on my last trip was favourably received, even though they did not use MERRIMAN I don't care. I saw GENERALOV recently while he was in MOSCOW. He told me that he had called MERRIMAN but could not reach him and when he did reach him MERRIMAN told him that he was busy. Possibly you gave MERRIMAN instructions that he should not go to a meeting. H: MERRIMAN says that he has never heard anything from them. G: Did GENERALOV actually speak to MERRIMAN? S: He was told by MERRIMAN that he was too busy, but why could he not have turned over the materials he promised me that he would get? These were just the overt materials that we had all agreed he would get for me and pass them through GENERALOV. H: Simply because MERRIMAN has not heard anything from GENERALOV at all. S: We shouldn't use such old men. He said in my presence in unmistakable English that even I could understand that he would get these materials for me. G: The point is MERRIMAN says that no-one has called him on the phone. S: GENERALOV told me he called. G: One thing is clear, either MERRIMAN is a liar or GENERALOV is a liar. S: Let's check into this because I received credit for having turned a man over for contact, but how they use him after that I couldn't care less.

75. G: Your present situation is now clearer but there will be days when you have to make an appearance somewhere, possibly to visit PAVLOV or go to the Embassy, and sometimes this could be in the evening. S: Yes, and on some days we will have to work during the daytime. On certain days I should be in my room in the evening and on other days I should meet with Soviets, but particularly since at this time there are many intelligence people in London, for example while I was on my way to see WINNE I ran into VORONIN. In MOSCOW he was the chief of a NAPRAVLENIYE in Strategic Intelligence under General SOKOLOV. Tomorrow I will meet him at nine o'clock and we will have a talk. G: Is he here on a mission? S: Yes, he has his own mission and there are a lot of intelligence officers that you have permitted to come here, particularly a large number of the neighbours. They are watching our people at the exhibition. G: Did he come as a member of a delegation from Lt.Col. ROGOV's to which you belong? S: No, he was sent here on a special assignment independently.

76. G: Let me continue now with questions on BERLIN so we can cover this subject. S: Very well.

Berlin ✓

77. G: This is an important question. What is the degree of confidence of VARENTSOV and other high ranking Soviet military officers regarding the readiness of Soviet forces to meet the consequences of KHRUSHCHEV's BERLIN policy? That is, if physical resistance develops? S: That is a very important question. If we consider today's situation the Soviet Army is not ready for any widespread war. VARENTSOV said there is no confidence that our forces are prepared. I even wrote you this and VARENTSOV said specifically that in going forward this way we are proceeding to a definite risk. We are preparing our troops and training them to be ready for any eventuality, but at this time there is no confidence that they are prepared. G: Did VARENTSOV say that? S: Yes, he said that. They are trying to establish this confidence, the Central Committee members, the various Party members and the Ministers are all at the production centres to develop the needed equipment preparedness and the Marshals and Generals are constantly with troops to develop their combat efficiency. As an example, during the manoeuvres in ODESSA Military District look at how many Generals perished there.

78. G: How do they regard the military feasibility of containing the military conflict within the D.D.R.? S: This is a purely adventuristic concept. They plan to block all roads of access through the D.D.R. to BERLIN with tank forces. Of course the first echelon of forces will be East German troops and back of them in a second echelon support role will be Soviet troops. As soon as this barrier is smashed then additional reinforcing troops will be brought up. The entire plan involves co-ordinated action on the part of East German and Soviet troops. The thinking is that if these reinforced troops can strongly repulse the Anglo-American, French and West German forces then these will abandon further conflict and negotiate with the East German Government in order to obtain transit to BERLIN. Further conflict will then be avoided and the Soviet thinking is that the Western powers will be afraid of further conflict. The Soviet estimates are that the West German Army is not prepared for conflict and specifically they are considered to be 80% of strength in equipment and manpower.

79. G: What sources are there to whom you attribute this thought? S: My sources are Sergei Sergeievich and, write down, KUPIN. KUPIN is now the Commander of artillery in a tank army in the D.D.R. M: Did you see him at VARENTSOV's? S: Yes, I did and he has just arrived in MOSCOW and he will be the artillery commander of the MOSCOW Military District, replacing General POLKOVNIK of Artillery LIKhACHEV who is being retired and, as I told you before, KUPIN's nephew GONCHAROV is married to YERLENA, VARENTSOV's daughter. G: So they are relatives. S: KUPIN has not received this position yet but the Central Committee has already approved it. His headquarters will be right near my house and he will visit me and I hope to be able to get much good information from him.

80. G: Do you think that the Soviet forces are ready for general nuclear war and what is the estimate of Soviet officers that such a war may develop out of the BERLIN situation? S: They do not want an atomic war but local atomic strikes are possible since they say they have what to spit with, but in so far as covering important military centres or concentration points they do not have the capability and for this reason KHRUSHCHEV is fighting for peace.

81. G: Therefore what would you say about the position of the preparedness of Soviet forces for nuclear war? S: They are not ready. KHRUSHCHEV's statements about this are all bluff, but he is preparing as fast as possible. Certain evidences are to be seen. Near where I live are offices of the RAYVOYENKOMAT who belong to the organization and mobilization Directorate and they are beginning to re-examine discharged officers. This is specifically restricted to engineer officers of all categories and other technical officers such as Signal Corps men, etc. In other words, the local military officers have received an order from the main organization and mobilization directorate of General Staff to re-examine all discharged technical officers and to place them on active duty.

82. G: Where did VARENTSOV himself acquire his information on the subject? Was it from official documents or from meetings within the Ministry? S: He got that from the Supreme Military Council where KHRUSHCHEV sits as Chairman and the active voices are usually KOZLOV and MIKOYAN. The other members of the Presidium are silent. These three are pressing and demanding that the German question be resolved by signing the D.D.R. Peace Treaty and that this matter can not be put off any longer because the U.S.S.R. would then be in a laughable position before the whole world.

83. S: The D.D.R. is nothing, they are only a vassal, they say that if we do not do this now the future generations will not forgive us because we have talked so much about signing this and did not do it. At this time they feel a certain amount of military strength, although this is far from having the capability of covering all military targets with atomic weapons. The reasoning is simply this, to strike one sharp blow, let a little blood flow and the Americans and British will be frightened and withdraw. This is what he is banking on, but if he received a severe counter blow then maybe he would sing another tune, at the same time you know what a bad morale factor the Soviet Army and population have. This you know from other sources not only from me.

84. H: If this happens what does he think will happen to KHRUSHCHEV? S: He would be in an untenable position and may have to withdraw. This POZOVNYY told me. G: Would KHRUSHCHEV be removed? S: No. They could have removed him a hundred times before this. First of all it would be a loss in prestige and secondly there is no-one adequate to replace him. MOLOTOV is of little consequence and there are no people like MOLOTOV and MALENKOV available. KHRUSHCHEV is a fresh man, a politician and a Party man. G: In other words he will just pull his horns in but will still remain the chief. S: Yes.

85. S: By the way I wish you would pass to your military leaders the importance of these articles because none of them contain any foolishness or flippant material. The authors are of such stature that any article of little consequence would reflect seriously against them. I particularly request that you call to the attention of your military leaders the great significance that is now being given to the expansion of Soviet tank forces. Such a great significance is now given to tank forces and a tank army does have tremendous striking power. You must increase your anti-tank weapons significantly as well as build up your own tank forces.

86. G: Who brought up the conversation on the BERLIN situation when you were with VARENTSOV? S: I will tell you exactly how it happened. Although I was burning with desire to ask about this it actually happened like this. First of all everyone had a few drinks and my wife quite innocently said "Sergei Sergeievich, looking at things from the viewpoint of a woman and a mother do you think we will sign the Peace Treaty with East Germany?" He said "Yes, this will be done" and later when we separated from the ladies together with POZOVNYY and myself he spoke of it freely himself and both POZOVNYY and I had interest in this matter so we furthered the conversation, but to be perfectly honest it was brought up earlier by my wife.

87. G: What is the opinion of VARENTSOV, that is does he agree with KHRUSHCHEV's view regarding what the Western powers will do? S: I can tell you exactly what he told POZOVNYY and myself. He even cursed and said "We are definitely embarking on a risky action". He mentioned that KHRUSHCHEV is prepared to reinforce the original clash with considerable reinforcements by tank forces. But he does not want the war to spread further. He realises that the NATO powers have strong nuclear capabilities, but he is relying on the assumption that they would not use nuclear weapons in the first phases of such a conflict. If KHRUSHCHEV had such capabilities his concept would be to launch an all-out initial smashing blow. But he does not have this and I have heard this view expressed many times by many officers on the General Staff. The people do not want to fight for anything in East Germany. In addition, we are subsidising with billions the black African peoples and are constantly being visited by their leaders and the attitude is why do two things at once?

88. G: What do the other high-ranking officials think of this? S: The high ranking officials including VARENTSOV, who is also a big man, realise that we have certain strengths but that in many respects we are not ready for a prolonged conflict, but they simply give orders to produce, to support and to execute orders and they have no choice but to do it; if they refuse they will be removed. Whether they agree or not they have to do it. To keep their positions and not get thrown out they would sell their souls to the devil. For example, you remember the time when VARENTSOV was not a Chief Marshal and was criticising KHRUSHCHEV here and there. Now at his party since he has become a Chief Marshal he raised his glass and offered a toast to the health of Nikita Sergeievich. I fell back, I raised my glass, but what the hell would I drink to him for? I thought of you and drank to your health. Now, of course, VARENTSOV is pleased with him and is willing to produce all the rocket forces available and he is particularly pleased at becoming a Commander in Chief of all rocket forces, tactical and strategic. Of course, all people are human and when one receives these great distinctions and power one will use this power and now VARENTSOV is favourably disposed towards KHRUSHCHEV.

89. S: But everyone knows how KHRUSHCHEV is lying when he says that we have caught up with America in milk production and in meat when for meat

they are slaughtering rabbits and horses.

90. H: And who was there when the actual ceremony took place? J: If he can reconstruct in detail how it all happened.....Who else was there with you - just POZOVNYI and his wife? S: I will tell you again. After he had received his promotion, a whole month and a half elapsed before we could congratulate him as he was absent from MOSCOW, let alone give him the customary toasts. And he himself felt that he must have a party with his close friends, and also invited Col. General ZHDANOV, The Chief of GAU - but he was away in LENINGRAD at the time and was not there with his wife. Therefore what happened was that one day Ekaterina Karpovna rang up my wife, I myself not being at home but in my office at the time, and left a message saying that he should keep Sunday free as we want you to come to lunch with us at the dacha that day?

91. S: The same message-order was given to POZOVNYI through Lyuba Alekseevna, his wife. His car....by the way he has been given a ZIM again as a Chief-Marshal, whereas before he has a....not a Volga...not a Chaika... no, wait a minute only that Marshal has a Chaika...no, a ZIM.... VARENTSOV hasn't got a Chaika. Only the Minister, The deputy-Minister and the Chief of General Staff have a Chaika...SOKOV hasn't got a Chaika either, he has a ZIM too...I have all the numbers of these cars...The message went on to say: "the car will call for you then you will drive over to SOKOL to pick up the POZOVNYIs". And this is what we did. POZOVNYI and his wife, myself and my wife, VARENTSOV and his wife, their daughters Yerlem and little Natasha and my daughter Galya.

92. S: After the meal was over, they left the table, the children are fifteen years old. Discussion began on various matters, we drank, he also made a complimentary toast to me; and so we drank...but it was all a question of feminine psychology, you understand, the women do not want war. So my wife asked "Sergei Sergeievich, but will the agreement be signed - now?" And he replied "Yes, it will be signed!" The subject was dropped then, however. After we had drunk some more, we got up from the table. We had drunk well, vodka, cognac, wine... and then we returned to the German problem, this time on my initiative, taking advantage of the lead which my wife had achieved on her own...I hadn't asked her to do so...this is of course only a detail, but again perhaps an important one...and he went on to speak as I have already reported to you. G: When was this? S: On Sunday June 25.

93. G: But did POZOVNYI have any opinions on this? S: Yes, he did. POZOVNYI actually saw me off the day before yesterday. I gave him a present of my spectacles which WINNE bought for me when I was over in Birmingham, as he had no spectacles. We said goodbye and as I was going on this trip I invited him to a meal at a restaurant. Well, after we had eaten we had a little chat. He also swears at KHRUSHCHEV, he swears at him a lot in fact, for his adventuristic policy. He actually meets many generals since he sits with BIRYUZOV, the Commander of thePVO of the land. He expressed many opinions, both his own and those of other people.

94. G: But for what reason do these other criticize KHRUSHCHEV? S: They are swearing at KHRUSHCHEV because he is making such a row when everything is yet far from ready and he may result in starting such a conflagration and we will get such a kick in the pants that blood will flow from our people...! This is why they are swearing at him! After all, the generals are taking a wider view of things, more especially as POZOVNYI himself is a political chief, a political worker in the Soviet Army.

95. G: Of course, he couldn't have told you such things in VARENTSOV's presence. S: of course not, but I must tell you however that POZOVNYI has often enough spoken to VARENTSOV in this vein, and often VARENTSOV agreed with him even. On various aspects and various problems. These are various details for which I can vouch [sign for] in my own blood! I can open a vein or an artery, which ever you please. Anyway gentlemen, there can be no doubts whatsoever on this, otherwise we will find it very difficult to work together or to agree.

96. G: But do you consider this may be a dangerous situation for KHRUSHCHEV, i.e. if things came to a negative situation do you think the top brass will begin to shout that he had dragged them into the mess? S: Yes, they could. G: And even remove him [KHRUSHCHEV]? S: Yes, they could remove him. Or alternatively, they could leave him - if they feel that the Anglo-American Bloc is <u>really</u> prepared to hit out not once but several times kick us in the teeth in localised areas and even warn us that they are prepared to go outside the localised areas and hit us on a wider scale even - then KHRUSHCHEV may postpone his fixed time limit. What will happen will be that ULBRICHT will say something, KHRUSHCHEV will support him, some dogma will be found and once again he will say "O.K. we'll talk about it later - anyway truth is on our side!" Something of this nature may take place.

97. S: But there is a final point I would like to make, even though it is clear to you, and it is my duty to point out as a high ranking officer of the General Staff that if this time we come down from our positions and do not show firmness, then KHRUSHCHEV's position will be very very much strengthened. All the peoples of the world will believe in him more and more and he will dictate his will in many other questions also. I myself am against that we (the West) should be the first to embark on wide scale conflict as this would be an error from the point of view of world opinion and also we would be doing this without proper preparedness. If it is decided to go ahead then one should go full steam ahead determined on a <u>total destruction</u> - as I have already told you in April/May. If not, then show <u>firmness</u> - to kick him in the teeth once or twice so as to stop him short! Or alternatively to prepare oneself on such a wide scale, that he will see that before he can even start anything he will have suffered complete ruination.

98. G: But do you consider that this represents VARENTSOV's own personal feelings or did he get this view from some sort of conference? S: This is not result of a conference but purely because VARENTSOV knows the truth of the matter. VARENTSOV knows how many rockets there are available. VARENTSOV knows what there is new. VARENTSOV knows what is possible and what is not. VARENTSOV knows the sum total of what we have available, what is available now and what the potential is for the future. VARENTSOV bases himself on a true knowledge of our actual truthful position as it in fact is and not what they are always saying it is. Although they may know just as well what VARENTSOV knows. As far as I know VARENTSOV and as I see the situation and which as a responsible person I must report to my Government, High Command and to you (since I am now talking to you as living responsible persons), VARENTSOV bases his evaluation of the situation on the knowledge of the actual true facts of our position.

99. G: But does he more or less support KHRUSHCHEV in this? or does he think that....? S: No, he does <u>not</u> support him and these are VARENTSOV's words: "We are going ahead at great risk" [idem m risk]: He (VARENTSOV) is taking into consideration the factual reality of the situation and it may well be possible that VARENTSOV's views coincide with the views held by ROTMISTROV, ZHADOV, MOROCHKIN and GRECHKO. He did not detail this so I cannot quote him, but the way I get the impression, judging him as an experienced person, I would say to you that if VARENTSOV knew that he had available 10,000 atomic missiles of various yields, he would have said "Oh, that is sufficient for us to cover the bases in Turkey, Iran, in the North etc." But VARENTSOV knows well that such is not the case, that he has not got these available, that they are just only still in the stage of manufacture, still in the stage of planning. VARENTSOV knows what he has available and he knows that a blow could be struck - but could this blow be taken to its logical conclusion? This is what VARENTSOV is not sure of, he has doubts because he has not got all this available.

100. G: Do you think your Intelligence organs have sufficient data on our war preparedness etc.? Are they really in a position to evaluate our strength? Or are they only relying on Western intentions? S: This is an excellent question. Here the point of view of the chiefs of Intelligence, as well as that of my colleagues in Intelligence and myself is that we have <u>exact</u> knowledge of the true military position (of the West), in certain respects. We have, for example, exact knowledge as regards the status of F.R.G.

military strength. Here, Intelligence has obtained exact information. Strategic Intelligence, through its special illegal agencies and other means, has obtained knowledge of the location of all vulnerable places in the system of defence and war-preparedness. Although these data are not complete, there are certain sources of information which strengthen KHRUSHCHEV and his Government in their views. His policies are therefore not entirely based on simple "nakhal'stvo" [= arrogance]! KHRUSHCHEV bases himself on real factors of which he does not know all the details and on this he bases all his insolence and firmness.

101. G: With respect to the intentions of the West, as far as BERLIN is concerned, can the Intelligence Organs give KHRUSHCHEV any positive data? S: Yes, but not fully. It can report to KHRUSHCHEV that it is known exactly that the F.R.G. military units are of 80% strength in manpower and equipment. This is the figure given by Intelligence - 80%, not 70% or 75% but 80%! Therefore, judge for yourselves! Does this look as though Soviet Intelligence has got exact data which it supplies to KHRUSHCHEV, or does Soviet Intelligence mislead him with the information they provide? This is for you to check and to decide. And another thing: Intelligence information is provided not only by Strategic Intelligence Organs, but also by the Intelligence Organs of all Socialist countries. I must tell you that on any day that I went into G.H.Q. in Gorki Street, every time without fail I would meet there some representative or other of a country from the Socialist camp: whether in uniform or in civilian clothes, but I could see perfectly well it was a foreigner... a Hungarian, Roumanian, or Bulgarian. Every single time, all the time, there they were, with their brief-cases and assigned cars. Because as a result of the WARSAW Agreement, a constant, serious, intensive and wide-spread preparation is taking place and a tight control has been introduced to unify patterns of training and joint operations. Not a day passed without my running into one of these characters, walking in or out of all the various Directorates. Therefore the factual situation is revealed in all its exactitude, but I would add that it is not complete nor is it in any great depth. For instance the Intelligence supplied by Czecho-slovakia and Bulgaria is much more exact that the information supplied by the Hungarians. Their information is supplied in more detail and, on checking, proved to be more correct. Because all intelligence under SEROV is co-ordinated and all data is put together and evaluated.

102. G: Have you noticed that there is an intensifying in the tasks set to Intelligence in connection with BERLIN? S: Yes, I must tell you that for instance the Soviet Mission in West BERLIN is composed entirely out of officers of Strategic Intelligence. For instance, Lt. Col. Petr GORELOV who was at the Academy with me, we both finished in 1953. He is not there now actually, he is on leave in MOSCOW. Recently we went together to the restaurant 'Aragvi' and he told me how the Americans had stopped him several times. You know they wear Soviet uniform, they are not in civilian clothes, this is the Soviet Military Mission in West BERLIN, so, he told me how the Americans stopped him and told him: "You are in the wrong zone" and GORELOV replies: "Gentlemen, open the map and look at it, I have perfect right to be here, in these particular streets". But the Americans insist "No, you are not in your zone" and they surrounded him, but he showed firmness and after looking at the map, it turned out that GORELOV was in his rights after all and had not infringed any regulations which would allow him to be accused of provocation. But such provocations do happen and they (the Soviet Mission) are working there now full steam ahead. They are all from the Strategic Intelligence.

103. G: Do they busy themselves with determining the mood of the people and all that? S: Yes, all that. What I would like to point out is that - in our actions, there must be an element of sober and conscious preparation, our actions must show assurance /confidence and, on top of that, we must also introduce into our actions a slight element of adventurism so that we could drum it into his skull and disorientate him(KHRUSHCHEV). For instance, you bring in a tank Regiment, but it should be announced to be a whole Division. Well, let Intelligence search like mad to find the other Regiments of the Division - where can they be. But let all the Soviet people know, let all the peoples-signatories of the WARSAW Pact realise that the Americans, English, French and Germans of the F.R.G. are ready to meet seriously and stand firm against this provocation regarding West BERLIN and the intention to subjugate West BERLIN - that is as clear as black on white.

Let it be clear that (the west) will stand firm and are prepared to strike a blow of destruction, but they do not want to be the first to strike, so that all the peoples should see who is the real aggressor and who is the defender of truth!

104. G: But did you not gather from your brother officers in the D.D.R. that they have been given new missions and they find conditions of work there more difficult now and that they have more tasks to fulfill etc. S: Yes, I did discuss this matter. Conditions of work were always difficult there, their task is: to find out exactly what the Americans, English and French are doing. That is their most active task, the one that is drummed into their skulls daily and on which definite results are demanded. Not only demanded but they are under constant pressure for results. All sorts of information is demanded: what new units have appeared and where, what are their numbers and designation, what type of units - whether artillery, engineering or Air Force.

105. G: How about the popular views and reactions? S: They are also being studied. I can also give you the views of FEDOROV and the views of KHOROSHILOV. You know, KHOROSHILOV, not VOROSHILOV, but KHOROSHILOV Jurij - he also studied at the KIEV Artillery School where I did, but he finished a year before me. I finished in 1939 and he in 1938. After that he was Instructor under ODINTSOV at the Academy and later he commanded a Brigade of conventional Artillery. Now he is chief of Staff under KUPIN who is the present Artillery Commander of a Tank Army, but KUPIN is leaving; KHOROSHILOV however, will remain C.O.S. of Artillery of the Tank Army. I saw him in MOSCOW recently, we had a meal at restaurant 'DINAMO', he invited me; he has his own MOSKVICH car, he came to collect me. And his views are as follows - this is what he told me; they are going to shoot us down, these Germans of ours, like partridges, if we do not take up a circular defence position so that we could pulverise everybody". And these are exactly the views held by FEDOROV. And I was very glad that these two colonels should have such confidence in me, and they know me well, since 1937 KHOROSHILOV knows me and FEDOROV also has known me for many years and respects me, and loves me as a friend, our families meet often. And FEDOROV told me that in September will begin the mass evacuation of (Soviet) families from the G.D.R. in expectation of whatever may happen next, and FEDOROV should know because he has his wife Shurochka there and two children a boy and a girl; the boy goes to school 15 kms. away from where FEDOROV's brigade is located [Comment WEIMAR/FELD, school is in NAUMBURG].

106. G: Do they consider that in a protracted conflict the D.D.R. forces will run away, over to the West? S: This is a second point. The first thing they spoke to me about was the attitude of the ordinary (East) Germans - the civilians, not the army - and this mood is bad. As regards the armies of the D.D.R., they expressed a very low opinion of its organisation and its commander - what the hell is his name - (they consider) he is a very mediocre person (Commanding General D.D.R. forces). As regards the D.D.R. officers, they said "We are not sure of them, they can turn either way". As regards the ordinary soldier, they didn't express any definite opinion and I didn't ask. But this man, the General commanding D.D.R. forces, I've forgotten his name, but he is such a fool. We see him on manoeuvres and he shows no deep thinking, no wise or large-scale vision, he is very superficial and mediocre. But the main thing is that they (the Soviets) are afraid of the ordinary German citizens, they just hate the Soviets. They will shoot them down like partridges as soon as we go out into the field of battle, we will (have to) take up all around defence and fight both the F.R.G.'s and the D.D.R. Germans who will have run over to desert.

107. G: And what if the Poles too rose up and attacked against the lines of communications? S: God grant that this will happen.

108. S: Now gentlemen I would like you to read this extremely important document. This is a photograph I took of the letter of the Central Committee of KPSS containing notes of the KHRUSHCHEV-KENNEDY talks in VIENNA. I didn't bother to photograph KENNEDY's questions since these are well known to us but I photographed the replies KHRUSHCHEV said he gave so that Mr. KENNEDY and our leaders could check and see what KHRUSHCHEV reports tothe Communist Party not only of the U.S.S.R. but all the Communist parties of the world,

because you will see at the beginning of this report a top secret order to pass the contents - in confidence - and verbally - to CASTRO, to the secretaries of the Communist parties of Italy etc. That is to say the respective Soviet Ambassador will summon TOGLIATTI for instance and will read the contents out to him. You will see, there is an exceptionally interesting introductory note there, giving instructions how to pass on the contents of this to the Communist party leaders in the U.S.S.R., the regional secretaries, because this letter is not to be seen by all members indiscriminately, and how to pass on the contents to the Communist (Secretaries) of the sister parties in the rest of the world; and separately for Comrade CASTRO...The Soviet Ambassadors in the respective countries, will summon these people and pass on to them verbally the contents..... It is a most interesting introductory note, please translate it and pass it on to our leaders.....it is most interesting for them to see how all this is done. And this contains not only all KHRUSHCHEV's so-called statements, but also his concluding remark to KENNEDY; "Mr. KENNEDY, inform MACMILLAN, DE GAULLE and ADENAUER that if they do not sign on our conditions, there will be war!" At least that is what he tells the Party he said to KENNEDY, but perhaps it wasn't quite so...and that is the interesting thing... A tremendous political analysis should be made and you and I are doing a great job here... I beg you to pass it on to your Governments at once.....(Subject then remarks how impressed he was with the firm answers given by KENNEDY to KHRUSHCHEV, and goes on to read out extracts from the document in question)....This will bring to light the real state of affairs and the attitude of the C.C. C.P.S.U. and KHRUSHCHEV towards this matter....that is to say: propaganda, agressiveness and firmness....it is most important that KENNEDY should know this....

109. G: When do the autumn manoeuvres take place in the U.S.S.R. - will they for instance give a definite military character to this autumn's manoeuvres, to give the impression of a type of mobilisation for instance.... In view of the BERLIN situation? S: No such demonstrative manoeuvres take place which are in fact a cover up for some sort of planned mobilisation as it is considered that everything is conducted in such absolute conspiratorial secrecy and all is so successfully concealed, that no extra precautions are necessary to conceal an actual mobilisation....they just mobilise! For instance, a review is now taking place of recent dismissals.... and it is just following its course....I know about it, you know about it and a few others..... Manoeuvres are not organised so as to conceal actual mobilisation. G: On the contary...in order to impress the West that you have such and such forces. S: I understand. There are no longer spring, summer, autumn manoeuvres, now we have only one type of manoeuvres - both inside the U.S.S.R. and in the Peoples Democracies, combined manoeuvres including one division from GDR, per army and these manoeuvres will continue, but they are no longer split into spring, autumn, winter, or garrison training - they are working in accordance with a combat training plan.

110. S: The call-up is proceeding according to age. KHRUSHCHEV has said people are to be "returned" [vozvrashat] (i.e. re-called) and the District Military Committee [Rajvoenkomat] have started re-calling the technical personnel, they are not taking the others yet, they have plenty. We take it for granted that everything that is done in U.S.S.R. is done under cover and in this case the manoeuvres are not a cover for mobilisation.

111. G: But when the alarm is sounded, when the BERLIN situation becomes acute, will this affect all the WARSAW pact signatories? S: Yes. Simultaneously. They want to do all this as soon as the 22nd (Party) Congress finished its work. The Congress will take place in October.

112. G: What is the opinion of prominent officers in the Soviet Union with regard to a possible revolt in say the GDR, Poland or Hungary? S: I can give you an exact answer to this question. Such things are not expected. No plans have been made for this. When hostilities begin, if the situation is favourable when the active elements go into action, then the mission is accomplished. If things become difficult the reinforcements

will join in the fight, and the alleged reason will be, say, for the unification of Germany, etc. This is the aspect in which this problem is seen here. G: I mean if the war expands. S: Then plans can be brought into being which had been prepared by your Intelligence and your Command. And the worst situation for the Soviet Army is that the GDR enlisted men will defect as soon as action starts. When you put a pistol to someone's head he'll keep quiet. They only really expect individual actions, and there won't be any large scale ones.

113. G: What do you think would happen if the leading echelons in the West Army would be West German troops? Do you think Germans would shoot at fellow Germans? S: Do not count on the GDR armies refusing to fire on the FRG ones. They will fire. Soviets don't count on all Germans who are under arms, the GDR officers and men fighting the West Germans, that is why a certain amount of purgeing is going on, but they are certain that the entire GDR Army will not lay down their arms when ordered to fire on the Western armies. G: Whose opinion is this in addition to yours. S: KHUROSHILOV's FEDOROV's, BIZAFOV's and KUPIN's. KUPIN is very pleased that he is being transferred from GDR to MOSCOW, Military District, and so is his wife.

114. S: VARENTSOV knows a lot, perhaps he doesn't tell it all, but when he voices his opinion he takes all he knows into consideration. His opinion is that the time is not right for action. I've told you why this is his opinion.

115. G: But if they really want an extended war to break out, what are the main steps they would take, other than in the Berlin situation? S: KHRUSHCHEV's Government of adventurers and his (FR) consider in such a case, mass destruction by the firing of rockets. This is in view of the fact that the internal situation will not stand up to extended military operations, morale will not stand up to them, desertions will start in order to save life, as a result of personal dissatisfaction, low standard of living. So the plan is to slam you with rockets for mass destruction and then the internal situation will right itself on its own. They are relying on mass destruction for which they are actively preparing. There is such a plan. Have I made myself clear?

116. G: If a report along the line of what you have just told us and sent to us appeared in the Western press, what would be the Soviet people's reaction? S: They would never get to know about it. All the Soviet Press is under the Control of the Central Committee. For example Mr. R'MK's declarations were only published in full in the magazine "Abroad" [Za rubeshom], which has a very limited circulation. I read it, as I have access to all publications. Only excerpts were published in the daily press. It was a very fine article well thought out and if our people read it they would see things as they really are. However, they only see Pravda, Isvestia and others of a real yellow Press.

117. G: What about Government officials? How would they react to what you have said and given us. S: If it reached all the various branches of the Administration it would, undoubtedly, create a very strong impression. But believe me, certain papers, marked with a red classification don't reach even party district heads. All they are fed on is "PRAVDA" and "IZVESTIA".

118. G: What would happen if we did smash through their tank forces blocking access to Berlin as you suggested? S: They would double strength in that area, and then we would have to double ours, slapping them in the teeth once again. G: And then they will retreat? S: Yes. So our problem is to burn their tanks out and place our there.

119. G: Why do they have to cover the road approaches to BERLIN with Soviet forces? If they sign a treaty they can use the German forces.

S: Because GDR is not strong enough. However, the Soviet Army will be the second support echelon and this fact will be known to the enemy. A German regiment may be backed up by a Soviet Division. G: So the very first units will be GDR units? S: Yes. Germans but reinforced by Soviets.

120. G: How will they control the air corridors? With German or with Soviet aircraft? S: With German and Soviet aircraft, mostly Soviet since the Germans have very few. However, joint action is planned.

121. G: Will they shoot down the Western aircraft which - S: Yes, they will shoot them down. They are making preparations for this, with fighters and A.A. weapons.

122. G: Does VARENTSOV think this too? S: Yes. After all I am not the Head of GHQ, I am continuing the analysis which Sergei Sergeevich has said in reply to your serious and very detailed questions. I have tried to tell you all from this source. You can check it by other sources.

125. G: Has he said anything about V-75 in connection with BERLIN? S: As I have already told you V-75 is a tested rocket which can be found everywhere, even in the Berlin area. It is produced in large quantities. That is a proven weapon in which they believe. I am sure this weapon is already in Germany.

124. G: So in spite of the fact that Sergei Sergeevich says that the Treaty is ready for signing your opinion is that KHRUSHCHEV may NOT sign it if enough pressure is brought to bear? S: Yes, KHRUSHCHEV knows that he had many deficiencies. We have been witnesses before now of KHRUSHCHEV retreating or naming new dates, or just shutting up. I want to repeat once again. Let us take the situation: The GDR have set out their blocking forces the second line is formed from Soviet tanks and artillery, we break through, they send reinforcements into the breach, but they will stick to the same limited area. The Soviet forces will not extend the fighting area. We must be prepared for them taking a gamble and expanding the conflict but according to the plan in force now, they will not expand the conflict. They will, however, increase forces continually in that area until they are overwhelmed. So we must have enough forces to suppress them.

125. G: Do you still consider, in spite of the fact well known to you and the Soviet Government that the main strength Western forces are mainly strategic and not tactical, that is locally, in the European Theatres, do you still think it is necessary or advisable to make a show of force specifically in Europe? S: Yes, show strength on German territory. This is VARENTSOV's opinion also: that it will all have a localised character only....only several flare-ups, several battles in the zone of communications...What he VARENTSOV means by zone of communications and what I mean by zone of Communications is, say - along the highways and railroads leading to Berlin.

126. G: And what do the Soviet Government consider will be the key steps for defence on the part of the West if the latter decide to hang on to BERLIN to the bitter end? S: They expect the following: a rapid completion of re-arming of the FRG and also increase the strength of their forces in Europe, both in numbers and armaments. And this is what they fear! The publication by Mr. KENNEDY of the 3 milliard increase in the defence budget created a very strong impression. Bravo, good for him! That kicked them in the teeth! They are convinced that these 3 milliards are going to be approved, although the Soviet High Command are convinced that there are also some other secret military funds at the disposal of the armed forces (of the U.S.) after all these exist in the Soviet Army and the USSR...they are therefore convinced that although they said 3 million, they will have at their disposal not 3 but 6 or even 9 milliards....They are afraid...and already they are

beginning to scratch their heads.

127. G: What was the impression as a result of the French moving a division back from Africa to Europe? S: A great noise was raised everywhere that this is an obvious preparation to interfere with the signature of the agreement and so on....Many more similar preparatory moves must take place so that the 'svolooh' - adventurer, that he will view it in the broad sense of things and not as a calculation for a purely small operation of local importance only but in its general widespread war aspect.... If he will receive several more kicks in the teeth like these announcements he will be faced with the following dilemma: either let things calm down and accept the fact that the West is so well prepared that it could move over to a general destruction... and he will certainly do so because he himself is not ready to answer (hit) back in full! Suppose he will send a bomber over these islands where are now (U.K.) and a rocket into America, and this will not be a direct hit, ["ne budet pritsel'no"] he knows perfectly well that all the strategic airforce (of the West) armed with rockets is hanging fire over the USSR...he knows that very well and he is keeping it in mind, but he says out loud: I've got the same! But he hasn't got the same - that's just it! G: And Sergei Sergeevich knows this too? S: And Sergei Sergeevich knows this and says: We are going on a gamble.

128: G: And they won't be ready in November either? S: No, after all how much is there left till November? Of course, it won't be ready. But the order has been given to reinforce everything already available, to train, to complete equipping with armaments, correct (faults) to maintain everything on a war-footing.

129. S: As I've already told you - and I consider this my sacred duty - to point out to you that the Soviet High Command and KHRUSHCHEV together with his Government are not only one single incident ["styohka"] in this German corridor (Area) but several incidents...that is to say he will build up the attack in the hope that he will break up the advancing forces of NATO in this area. He will for instance send out and deploy there say one tank army - we (the West) destroy it. He (KHRUSHCHEV) will at once send out another one - he has another echelon... I have already told you how many armies he has: how many armies there are in the GDR, Czechoslowakia, on our Soviet territory (Soviet Union) in Poland etc. tanks etc....which I beg you to pass on and treat with due importance and consideration...This is not a bluff, these are not match-boxes these are tanks moving rapidly on caterpillars and firing! If these are knocked out, he will replace them with others, saying "I will make them choke in this corridor!" Whereas we must do everything in our power to make <u>him</u> choke instead! He will then be faced with the dilemma: what to do next? Is it worth going further or not? And since he has not got the strength to fight out on a general wide-spread front, he will have to pipe down. Or alternatively if he finds out through Intelligence sources that there will be endless forces thrown in to replace the ones he knocks out, then he will stop at the very beginning and will not carry on the the signing of the agreement. These are the possibilities.

130. G: Do you think it possible that the Soviets may attempt to give us false and misleading information through Intelligence channels? S: Oh yes you mean dez. Yes, this is being done constantly. There is such a specific category of activity. Specifically they may spread rumours that the forces of the D.D.R. are larger than actually and that they are all in combat readiness and the ULLBRICHT has been making successful and popular visits, they can lie about the status of the East German soldiers morale.

131. G: Are they actually doing this now? S: Yes, and they will continue to do this. G: Do you know of any specific operations now in progress? For example, inform tion given to a double agent recruited by the Soviets or through any high level penetration they may have?

131. S: This is all done on a planned basis and is controlled by one headquarters. This is known to GRECHKO who is even related to KHRUSHCHEV and he consults with him on these political matters, but I don't know of any specific example.

132. G: Do you know of any high level penetrations in Western governments who co-operate with KHRUSHCHEV and on whom he may depend on in making BERLIN policy? S: Yes, there are, all the Secretaries of foreign Communist Parties in capitalistic countries. These should be strangled, but very little is done about them.

133. G: I mean non-Communist persons who are prominent? S: I heard about Cyrus Eaton and I reported to you about him. As this Central Committee letter shows the addressees are all Communist Party secretaries and others favourable to KHRUSHCHEV. I cannot understand why these Communists are not eliminated, they did this once before in Turkey. As a member of the free world now I realise that my governments are wise, but I must be a complete fool since it is totally incomprehensible to me why persons like CASERO and TOGGLIATI and the other Communists in the West are not eliminated since they are obviously creating a Fifth Column. As persons these individuals are nothing, but they do influence masses of people. At one time ATTATURK shot the Communists and in later years, NASSER and KASSEM also threw them out, why can't we do the same?

134. (Subject continues to criticise the humanitarian and liberal Western nations for not wiping out all Communists within their reach, basing his arguments on the very letter from the Central Committee which appeals for Communist support throughout the world. Subject stressed his intimate knowledge of the Communist Party operations which are completely deceitful and which he is trying in every way he can to convince the Governments of the West to take stern measures against. Subject particularly emphasised the danger that CASTRO may influence other Latin American peoples appearing as a Latin-type LENIN).

135. (Following a few minutes intermission subject said)"We have agreed that I give you all and we will join all our forces and possibilities for our work. You and I have been working together for less than a year, in fact we have been working together since only 20th April". G: Yes. S: a few months, a very few months. Let us look at the results. We, with your help, under your direction, with my possibilities, which I do not exaggerate, we brought to light a series of new questions of a political character - dealing with Central Committee of U.S.S.R., we touched upon many subjects related to the GNTK which deals with technical intelligence....is it now clear to us. I've told you how the delegations are made up, you read that representatives of KGB and GRU are included. We have brought to light military questions. We consider our tasks to have been carried out. Oh, but this is only the beginning. "Is 5 per cent".

136. S: If we analyse everything: concrete questions, material available, information, some of which possibly needs checking - that is the law, from a dialectic point of view, we also are learning a sort of dialectics but a type different from the Marx kind, we have given each other a lot.

137. S: We already have the moral right to say that for some of the questions we now have a new view, we have certain material which can't be thrown out, material extracted from our common scale of opinions, understanding conversations, wishes, and actions. That is to say that I consider that our work is aimed at a target, it is many-sided, it has not got a narrow, one-sided aspect.

138. S: All right we haven't got to the bottom of some things, but we'll get there. Everything can't be done at once. This is the first road we are standing on. I guarantee that the conditions of any sudden aggression which may be planned will be immediately communicated to

our H.Q. [Kommandovanie], complete with facts. What these facts are going to be I will let you know, when I discover them. That is one of the principal tasks. G: Of course. S: And so when we discover a series of new, basic facts there is one thing I am afraid of. I am afraid that we won't be able to carry through to the end and get the facts to our organisations, to our authorities, so that they could draw new, practical conclusions.

139. S: I would like to be wrong. Take for example that letter and introduction. One must understand that CASTRO is not only going to read it for information. There is lot we don't know, and we may never know, because my hand carrying the MINOX cannot reach that far, neither can our eyes reach that far. This must be developed however. If this much is given to CASTRO, and we know that millions are being given him, then he is involved also in other things. What conclusion can we draw from this? Eliminate him, at least stop him from developing more followers. That is were we are going to loose unnecessarily if we do not do this. How can we achieve this. I do not know how many more Central Committee letters I will have to open. I will open everything that passes through my hands. You are helping me in my search, by giving me material assistance. I am now able to take people to restaurants, I buy people drinks. I give presents. Everybody is pleased. People ask me to get them things. RUDIN himself has asked me to get him three sets of batteries, but has he given me money? We are going to buy them, you are going to spend £5 - £10. Then people have asked me to get cameras, rings/and so on. We do all this but we discover only this and that. I want deep conclusions to be drawn - don't expect to suddenly uncover something, just like spreading out a carpet.

/for cameras

140. G: What makes you think that we are not doing this? S: It isn't being done. G: You don't consider that it is possible tomorrow morning to act on your suggestion since there are considerations of a tactical nature, a question of timing. S: You can kill me but I cannot see what are your tactical considerations in the matter of CASTRO. Why do you keep CASTRO on? G: CASTRO will fall. Steps are being taken and at the proper time.

141. S: One day! With this "one day, sometime" we miss the bus. The right moment is a factor. Surely you didn't fly thousands of kilometres to see me, in order to say _ you are our friend". I know I am your friend. I am pleased to see you. You are pleased to see me. I can't give you all the secrets of GHQ, all the maps, all the plans - I can't get near them. There are documents which a Marshal reads and signs for, and if he wants to re-read them he has to sign for them again. So they know that Marshal so and so read this document five times. No one else can see these documents. And I don't see us recruiting a Marshal. Take VARENTSOV - once he has become a chief Marshal, he begins to like KHRUSHCHEV, you can't get anywhere near him. That's the way people act. He is well off financially, he has power, he wears badges of rank, he has a car, he has followers, he has a suite, he has a guard, a dacha, so "long live KHRUSHCHEV"! And who is KHRUSHCHEV? VARENTSOV used to say that KHRUSHCHEV is a fool and an adventurer, and now he drinks his health. I raised my glass: what can one do, but I didn't drink to him. I swear to you that he was thinking as we do but since he has started wearing the enormous USSR coat of arms - it's all over. A man is a man. You can't explain everybody's actions.

142. S: You may laugh at me and call me a braggard, but I take a lot upon myself because I feel I can do a lot. I have so far given you very little, but no matter how much I can give you I can't give you everything. And you won't have in every Directorate. One must face the truth. You must have a broader view. For this far-sighted men exist. These wise, far-sighted people should be more decisive. That is the wish of a strategic officer, member of GHQ staff of one of the branches of GHQ of USSR. G: I assure you this is being done. S: No,

not at the moment. G: You can't always have the results put in front of you. S: We should either work according to such a method that they (our HQ) believe us. Or else we just get together and drink wine. S: We have such sources at our disposal, and, they can't be carried through to their logical conclusion. That is what I am afraid of. God forbid, God forbid. Now take Mr. HAROLD. I love him very much. I think of him every day, as I do of you. I swear, I think of you (of him) many times during the day. hen I go to bed at night I wonder what he is doing, whether he is thinking of me. I listen to the radio - 163..... And to-day Mr. HAROLD looked at this material and said "A collection of articles, noteworthy abstract articles" but they are not, they are the views of GHQ of the USSR.

143. G: We only developed them to-day. We have just received them. S: We will sort this out among ourselves, but the high-ups, that Lord who sent me a message, which I prise greatly, he may say "this is not what we want". This is what I am afraid of. G: Do not worry about this. You are valued and the material as well. S: This is our first meeting: we are just getting organised with the elucidation of a number of questions, new material, and I just wanted to tell you what was bothering me. G: You don't have to worry at all. S: All these things won't stop me. Our contract is to fight. (G: explains subject's worries in English). G: You have the impatience of youth. S: I am not a young man, look at my grey hairs. You remember I told you if we don't risk all our diamonds, gold and valuables we will be destroyed; if we risk them our wealth will be tripled. We are taking too long to get started. S: I swear to you - believe me, as a strategic officer, these first steps of firm declarations, of a firm position, taken by Mr. MacMillan, Mr. Kennedy, that excellent fellow de Gaulle and Adenauer, who is also a good chap, have already brought into play a new element. Perhaps the best thing to do is to declare you have more than you have. Why should this bald devil get awaywith everything, everybody listens to him, he lies - and perhaps that is the right way to act. And all we do is say, "better don't do anything".

144. G: On this subject, could you tell me, how can we misinform this bald devil. Perhaps his Intelligence people do not have all the facts. S: His Intelligence Service is <u>not</u> all powerful. G: How can we get false information through to him? S: Do a little and magnify it five times. I repeat prepare tanks, anti-tank defence, increase your forces. Do it on the scale of a division and say you've got an Army Corps. And disseminate this information along all channels; press conference, and all the rest. (Say to him): "You dirty scum so you now declare that you will sign without us, after being our ally during the war, after we have fed you, we have supplied you with weapons, with transport. All your artillery, all calibres, would have been sunk in mud had we not supplied the transport. And now you willfully want to swallow up Berlin". I assure you that this is just the first step, he will swallow Berlin. Tell him "for this behaviour we are going to slap your face". This will make him stop and think. G: Can we do anything about this along Intelligence lines? S: Of course. And you must work from all sides.

145. G: What is the 5th Directorate, GRU, doing about this? S: Setting up their agency networks [agentura]. Have you read that letter of mine? All this is still going on, all agency networks have been activated and are in direct contact. This is being done everywhere, including the countries of the Far East. G: With regard to the BERLIN question, have "their"(GRU 5th Directorate) agents not become activated. S: Yes, all branches. The tasks have already been allocated.

146. S: now, before I forget. SUD'IN has gone on leave. He has been made a General. And by the way he was an Air Force colonel, but has now become an infantry General. He was preparing to go to Turkey, then he used the following subterfuge. He said his wife was ill - he didn't want to go to Turkey. So they said to him "you scoundrel, we

made you a General as you were going to do an important job. You were going to set up an illegal residentura using agents from other countries, not the Turks, there might be Swedes there, Bulgarians, etc." This embarrassed him and he went off on leave. Before he left - I handed the papers (SUDIN's) in to General POZOVNOY yesterday, he asked me to get him a nylon shirt, neck measurement 43 cm. - I gave him the paper that had to be typed - that paper I told you about giving SUDIN a telephone, the paper had already been signed, all POZOVNIY had to do is to get it re-typed on a special form for VARENTSOV to sign, and once it has been signed POZOVNIY will keep it until my return to USSR. SUD'IN asked me before he left "Get me a telephone, even if I am going away". His application has either already been vised for Turkey, or soon will be. I think he should be allowed in Undisurrounded so that we can be kept informed. If we do this we will be wise people.

147. G: Listen, through what channels and what actually should one say in order for it to sound like the truth to KHRUSHCHEV? This disinformation about forces, etc. S: The best way would be through Press, Radio, and through those people who we have doubled and who work for KHRUSHCHEV - he believes them. G: And the important thing is to get across that there are more forces etc. S: Yes, that wehave secret information, numbers assigned, atomic missile launchers [atomnye pushki]. STRAUSS has the right approach to this problem. We have got to envisage the situation in such a way that should the necessity arise we would give atom war-heads to ADENAUER. You can say "We didn't want to give it him, but if you (KHRUSHCHEV) are going to take one-sided action you force us to do it".

148. G: Now you are going to pay a number of visits to your Embassy here. Are there people in the Residentura or the Embassy, among the MFA personnel, who you think could have reliable information on the BERLIN question? Perhaps they have received special instructions, or perhaps they could tell that in the event of worsened relations it had been decided to send fewer delegations, either to England or to other NATO countries, or perhaps they have cut down on the number of families allowed to accompany Embassy officials. Do you think there could be such indications? S: Yes, there can be such indications. They should be watched, and analysed.

149. G: Would it be normal for you to ask "What do you think about the BERLIN question? How will it react on you here in England?" S: Yes, of course I could discuss this matter. PAVLOV has said that he would like me to visit his home. I'll tell you about it. Actually, PAVLOV when he was leaving for England asked for a transfer out of here and they want to make me a Counsellor for Technical Science here and Deputy Resident to LEV. Then recall him in a year and make me the Resident for England. This is the GRU plan, but the Central Committee will say "And who is father?" "The father is a White officer who fought against the Soviet Government and his son could finish that Government off". Exactly what the son is in actual fact doing. (Laughs). GRU has complete faith in me, I swear. That time I returned I went to SMOLINOV, Head of Cadres Directorate, I gave him two fountain pens, the most expensive purse I bought here at Harrods, cards and a bottle of scent. He said this is embarrassing" and I replied "Why embarrassing, they gave me these gifts, believe me the firms I visited said "(true name) our present to you", what am I to do with all this lot?" "Well, in that case, thank you very much".

150. S: The money that the U.S. and British Government give me I do not spend on myself only. G: Did you give VARENTSOV a present? S: He'll get one. This is the easiest of things. (S: goes on to describe a table lighter, shaped like a rocket, which he saw in a shop this morning. He also wants a battery electric razor, which he intends giving VARENTSOV as a birthday present on 15th September, when VARENTSOV will be 60).

151. H: Won't you be on leave at that time?

S: I intend postponing my leave, as Ekaterina Karpova has said to me the last time they were at the villa the artists have already been booked and you'll be the major domo". (Subject then goes on to suggest that they find a bottle of wine produced in the year VARENTSOV was born and make him a gift of it. This ploy had enormous success when used by the Counsellor in CANADA, GORUNOV who sent a similar gift to Gennadij Vasil'evich ALEKSEJKO (or ALEKSEJKO), RUDIN's Deputy). RUDNEV's

152. Subject then goes on to say that "The Chief Marshal" gets, in new currency, 2,500 (roubles) a month. Last trip when POZOVNYI heard that was once again flying to the big islands" he left a message for him "not to forget old soldiers", so subject brought him back a number of gifts for himself and his wife. "They kissed me. In spite of the fact that he is a rich man, he has savings amounting to hundreds of thousands in old currency, he adores presents". Everyone going abroad brings presents.

153. S: Now, I think I've told you everything about the GNTK Committee. There is nothing more on the Committee. G: Yes, but here is something important about BERLIN, could you find out whether special tasks have been given either to the Resident or to someone else in your Embassy here? Have instructions been given on what action is to be taken should the situation there deteriorate. What intelligence tasks to be undertaken in England with regard to the Berlin question have they been given? G: That is clear. I am sure there is something, I am sure VORONIN did not come just by chance, he has some kind of mission; he is the Head [Nachalnik Napravleniya] of a Direction.

154. G: We would also like to know the personal opinions of Embassy staff, if they dare voice a personal opinion, particularly if they disagree with KHRUSHCHEV. S: I think I can find out about the instructions received, but not the opinions and thoughts of the colony. It would look suspicious for "A MOSCOW man sent on a pedagogic mission" to try and find out people's opinions.

155. G: If you make notes do it very innocuously. (S: explains his very safe way of making notes, then goes again on to describe his meeting with the woman and her children and the clever way in which he acted. He also suggests that as he is Head of Department he could quite safely be invited to the British Embassy. He has already been invited by the Americans, at the time when the Patent Delegation visited the USSR). G: After you met her at an Embassy reception officially there would be a logical legend for greeting her in town later.

156. (S: suggests that there be no meeting the following day as he has a lot of work to do and must meet his people. This would also give the other people time to study the material available. ---Follows argument about how a suit should be bought for subject. He requests a dark grey suit for next day. N. agrees to get one for him at Simpsons. Also whether or not a dental plate could be made for him, since his Moscow dentist is very ill.

157. Subject was shown the map of London to orient him. Subject shows list of people he knows in England. Export Manager of HAWKER SIDDELEY - BELLINGER. MILOVIDOV has given him his card. He has a book for subject. ESSEX whom subject met at the Fair in LONDON. Subject then checks over list of documents he had brought with him and was to hand over.

158. The next meeting was set for the afternoon of 20 July , TYRNE would relay exact time. Subject then refers to SOEKARNO's visit to MOSCOW and says that the Soviets had given him a lot of arms and money as they really want to hit the Dutch hard. The situation there is very serious and an attack may start this year. Subject will give further details later.

159. Subject left at 0100 hours 19 July 1961.

Meeting No. 19

O Subject arrived at 1500 hours on 20 July 1961. He began by recalling that this day is the anniversary of the day three months ago when they first met and started working for the Cause. A toast was drunk to the work done and to still more to be done. Subject then reviews his activities the previous day, as follows:

(2.) S.: Yesterday morning I went to the Embassy as well as this /as morning, so/to clarify various points you asked me about. Various new things emerge which are of great interest and importance to us (Subject had made extensive notes which he used as an agenda).
S.: Then I spent about thirty minutes at our Exhibition (Earls Court) with WYNNE and subsequently had lunch with him. After lunch I had a little rest because I knew that in the evening I had to go to the Embassy and later meet SEROV's wife. I had meant to lie down for an hour only, but when I woke up at 8 o'clock I had been asleep for four hours! Just as I arrived at the Embassy, PAVLOV also returned from the reception and went on to tell me about the people he met there, specialists etc. Actually he (PAVLOV) told me some very interesting things denoting a most interesting (new) twist in Soviet strategic activities.

(3.) (Subject then recounts how he telephoned SEROV's wife and daughter at their Bayswater hotel and went over to collect them and, although they were already in their dressing gowns preparing to go to bed, convinced them (the wife and daughter) to come out with him, took them to his hotel restaurant and stood them an excellent meal for which he will send the bill later! Subject remarks that the SEROVs' attitude to him is most friendly, although he had only met them on the plane flying over. It emerges however that prior to his departure, on the day before in fact, subject had been summoned by Gen. SEROV who, after informing him that his wife and daughter were travelling as tourists to the U.K., asked subject to take care of them, ensure that someone should accompany them shopping, see that they had a car at their disposal etc. Subject and the SEROVs actually came over not on a scheduled flight but by the special plane sent over to collect the KIROV Ballet Company. And although Army-Gen. SEROV had sent a telegram asking them to be met, on arrival there was no one at the Airport, no car, nothing. Subject got the GVF representative to ring the Embassy and waited a whole hour with the SEROVs before finally getting on the bus to the terminal where he was himself being met by WINNE who then took him to his house. It was the Embassy who finally arranged the SEROVs' hotel, sightseeing etc.

(4.) Although subject didn't see the SEROVs any more that day (18th), when he saw them the next day - they were absolutely delighted to see him. As a matter of fact the daughter, who is 22 years old, absolutely fell for him! Subject goes on to recount how in the car (taxi) she squeezed up to him and how both mother and daughter expressed enthusiasm at his kindness and charm. This as a result of his gift of £20 which he

APPROVED FOR RELEASE
31 MAR 1992

/gave

gave the SEROVs for the following reasons: On arrival subject was given £115 by the Embassy for expenses during his 'komandirovka' (official trip) whereas the SEROVs had some dollars which after exchange amounted to only £18. General SEROV however had apparently particularly wanted a garden settee-swing for his dacha, but the cheapest cost £20-£50. Consequently Mrs. General decided to get a descriptive pamphlet and the General would order it to be copied in the workshops. Besides she much preferred to spend the money on blouses and cashmere sweaters etc. Subject then offered to buy the swing himself for the General, since he had wanted to buy him a present anyway, but Mrs. SEROV suggested buying the General something else. On hearing this, subject decided to give Mrs. General the money and let her chose herself. He consequently offered to do so in the taxi which took them on a night sight-seeing tour of the West End. Mrs. SEROV accepted with alacrity and insisted that on return to MOSCOW he should without fail visit them at their dacha where all the strawberries, honey etc. were at his disposal, and that the debt of money would be repaid. Whereas the daughter, Svetlana, was so delighted that she expressed desire to dance rock and roll with him! The SEROVs' eldest son apparently is married to KHRUSHCHEV's daughter Yekaterina, who is a ballet dancer. SEROV is consequently a VIP not only by virtue of his position but because of his relation to KHRUSHCHEV himself.

5. Subject then explains that Army-Gen. SEROV was BERIA's deputy in the old days, that he was kept on by KHRUSHCHEV (after BERIA's liquidation) and was later appointed President of the KGB. When the Presidency of KGB was handed over to SHELEPIN, SEROV came over to subject's 'firm', i.e. on SHTEMENKO's dismissal he was appointed Chief of the 2nd Military Intelligence Directorate. Notwithstanding, subject describes him as "just simple kindly old Ivan Aleksandrovich" who came to see his family off at the Airport and humbly begged subject to help them while in London. "and this is how I am helping!" concludes subject, roaring with laughter. (It also emerges that SEROV keeps bees at his dacha to cure his rheumatism)

6. Subject will meet the SEROVs again the following day (21st) because they are due to leave London on the 24th to visit other cities in the U.K. and on the 30th are due to return home by ship to LENINGRAD. Subject stresses that he is now "first on the list of visitors" both at the SEROV house and dacha, not only as a subordinate of the General but also by virtue of having been so attentive to the General's family. And all it cost him was £20! Subject intends to cultivate this to the full by visiting the SEROVs as often as possible and by patting the daughter occasionally since she seemed to like it!

7. Apparently SEROV's daughter, who although not very beautiful is very intelligent, is at the moment studying at the Mikoyan Aviation Institute where she hopes to get a degree of Engineer in Aviation electrical equipment ("elektro-oborudovanya samoletov").

8. Subject says he is a firm believer in enlarging his circle of acquaintances amongst houses "of interest", so as to widen his scope of possibilities, adding that he has another similar "useful"acquaintance.)

.../9.

Meeting No.21

1. On 24th July, 1961, subject arrived at 1305 hours. Subject has purchased a silver cigarette case costing £22 which he will give to [redacted], which he unpacked and displayed. It is to be inscribed "to dear Sergej Sergeevich" and not with [redacted]'s full rank etc., since their families are on very friendly terms and signed from (subject's true family name). After discussion it was decided that engraving is to be done in MOSCOW for security reasons. Subject agreed.

2. Subject requires further supply of batteries which he was asked to bring back by [redacted], both PHOTOS and [redacted]. S: The two sets are not enough. B: All right we will get them.

3. S: After visiting the Earls Court Exhibition for a short while that morning, I then went on to the Embassy where I saw PAVLOV who told me that he had heard from [redacted] that I was first on the [redacted] and was being 'recruited' for the [redacted]

4. B: [redacted] asked me for news of the machines I had promised to obtain. I told PAVLOV that I had already spoken both to [redacted] and [redacted] about both machines and that [redacted] was going to buy one in his own name and then hand it over to the Soviets who would pay the bill. The bill will then be taken by me to MOSCOW as an official invoice to justify the cost. The [redacted] engine will be delivered this week on Saturday. As regards the other ARITA engine, however, I plan to send [redacted] a telegram tomorrow (25th) stating that since the firm absolutely refuses to sell the Soviets less than 1000 machines en bloc, the British specialist who has been in frequent contact with [redacted], had agreed to buy the ARITA in his own name and subsequently hand it over to me. And I now request [redacted]'s agreement to this transaction and request that the cost of the machine in £ should be transferred accordingly to LONDON in my name. Such a telegram would increase the Soviets' trust in both [redacted] and [redacted] who are apparently listed in MOSCOW as my potential contacts for close study, and further use. It would be most advisable for me to send such a telegram tomorrow, to justify my stay in the U.K. during the past week. What I need is the price so I can report it even though delivery may be later. B: I will find out tomorrow. S: Then I can send the telegram a day later.

5. Subject requests additional photographic apparatus (tripot in particular) to save him adjusting the focus every time as he had to do for the 300 pages he has just brought over, i.e. spending 10-15 seconds on each shot. Subject guarantees that he never takes photographs unless he has 100% certainty that he will not be seen or interrupted. Consequently, the shorter time he spends in a locked room the better so as not to arouse suspicion as to why he locks his door. Subject listed all his photographic problems. S: The photography instructor has been scheduled to come here on Wednesday and we will cover all your problems.

6. Subject explains how he took photographs of secret intelligence (GRU) telephone directories of personnel working in the departments headed by, [redacted], who is the chief of 2nd Napravleniye of the 4th Directorate, and [redacted], who is the head of the 3rd Napravleniye (in the same Directorate): S: I succeeded in photographing them while [redacted] was away sick and I sat at his desk in which I found these directories.

7. S: The internal extensions in each department of the 4 number system can be obtained when ringing from an outside telephone

.../by

APPROVED FOR RELEASE
31 MAR 1992

by prefacing them with the prefix K-2 instead of going through the main (GRU) exchange no. K-5 03000 for instance. K-2 is the automatic prefix which connects one to the internal exchange. This is an open or rather semi-closed system. The General Staff Archives' tel. no. is K-7 which indicates that it is located in the BAUMANI district (of MOSCOW), these archives being located next to the STALIN Military Academy for Senior officers. (It is decided to revert to this later). (Note: Complete explanation of phone systems given in 22nd meeting).

8. In looking through these directories to find his own name, subject comes across an entry giving his home telephone number and saying he can be found through SHIKOV, Anatoli Ivanovich. Subject goes on to explain that SHIKOV was one of the senior officers in the 4th Directorate, having served previously to that in Egypt as Resident in Port Said. Other changes are scheduled to take place in the 4th Directorate soon as follows: On SUDIN's departure, SHIKOV will be promoted Head of the Napravleniye to replace Colonel DOLIN - the former Resident in IRAN and the present Head of the Napravleniye, who is in turn being promoted to replace SUDIN as Deputy Head of the Directorate on SUDIN's departure, although the post actually carries a General's rank, whereas DOLIN is only a Colonel. S; We will return to this in detail later.

9. S; As regards the Academy of Sciences directory, this includes the names of the many specialists mobilised for secret work on various defence projects, rockets, explosives, engines etc. Those peoples' names could not suddenly be excluded from the Directory - which is restricted secret anyway, as it would have aroused the suspicion of the other scientists in the Academy, most of whom are not party members but members of the old nobility or intellectual families. If these Academicians' names would have been suddenly excluded the others would have guessed at once that their colleagues were now working for the Ministry of Defence or the VPK.

10. S; Now last time we spoke of the S.P.S, P.S, P.5 rockets, details which I have already listed. I have no further information on the first two but would like to stress that each is a completely different weapon by virtue of their different ranges, earmarking and utilisation. The details which we already been listed in connection with those earmarked for submarine and land forces. I obtained this from PAPUSHKIN who had just returned from a course at the Senior Artillery officers Military Academy in LENINGRAD, where he had been studying these weapons at a VAK.

11. S; As regards the P.5, I actually saw this huge rocket with my own eyes and even touched it but it was instantly covered up by a large canvas and those attending the course were not allowed to study it - nor were they allowed to study the P.7 or the P.9 rockets which are all prototypes being tested in the research and development of various sizes and capacities for the production of a greater jet propulsion force ["reaktivnoj sily"].

12. S; As regards these developments, PAPUSHKIN as a wise and experienced Artillery officer commented that it is not possible to increase by mechanical means the jet propulsion force even further as the metal could not support this increase when the fuel expenditure (consumption) per second remains unchanged, since it would result in the metal burning out and this, in turn, if the fuel injector [forsunka] burns out, would result in an immediate fuel leak which would inevitably lead to either of two things. Either an outbreak of fire, or the rocket will cease travelling after the first 150-200 metres. It would be impossible to achieve since the essential scientific mutual balance will have been disturbed.

13. S; I'd like to mention something about the Directory listing numbers on 7th 4, commonly known as "traichatka", and explain that this Exchange serves the Minister himself, as well as all the Directorates, departments and Institutes coming under his jurisdiction - i.e. in General Staff of the Ministry of Defence. PAPUSHKIN's own Directorate however does not form part of (come under) the General Staff of the Ministry of Defence, but is part of the structure of the Ground Forces which is an

.../entirely

with the Ministry of Defence and its General Staff via the K PMLIN line "Kremlevka", which is allocated to all military "rukovodyashchiy sostav" (R.S.), for important conversations.

20. S: The reason why the Directory, in listing SERVOV for instance, does not give his initials - as is the rule for the majority listed in the Directory - is that SERVOV being quite a common name, it was thought this would avoid people guessing that the present head of GRU is identical with BERIYA's old deputy.

21. Subject also requests that he be allowed to buy the latest model of the American ZENITH wireless receiver, which having eight wave-lengths bands, Subject could also use as an alternative set to receive messages. He intends installing it in his "dacha" as he considers it would be simpler if he could also listen to music on it. He has no radio at home at all except the transistor we gave him. Besides he wants to improve his English by listening to the BBC. After much discussion regarding the security factors the request was held in abeyance for further consideration.

22. G: Let us work now on our agenda questions. First of all we want to clarify some points on the Berlin question. You said that assuming the roads were blocked - the Allies press on notwithstanding and send through transport planes to Berlin - these planes will be shot at. Who told you this? S: Firstly, this was told to me by VARENTSOV. Secondly, it was confirmed by Volodya FEDOROV when he was passing through with his battalion. Thirdly, by Yuriy KHOROSHILOV, who is the Chief of Staff of Artillery in the Tank Army, [redacted] under FU IF and who was previously a brigade commander of Artillery, but conventional Artillery, unlike FEDOROV (who is Rocket Artillery).

23. S: KHOROSHILOV was in MOSCOW on leave but was recalled back a fortnight earlier than the date originally fixed for his return. Notwithstanding, he found time to ring me and arrange to meet. We went to the Dinamo Restaurant where, amongst other things, he told me (as I have already reported to you) that "the Germans will make a real hash out of us!" So I asked him "But what will happen?" and he replied "this is what we are being told, and this is what we feel ourselves (will happen) and what I, as a Chief of Staff can tell you (will happen)..." and then he (KHOROSHILOV) went on to confirm much of what I had already heard... (as follows:).

24. S: As soon as the agreement (with GDR) is signed, a state of alert ('trevoga') will be declared immediately, putting all the GDR forces on the alert for the take over of control in all check-points - the defence and control of which in future will be their entire responsibility. Meanwhile, the Soviet troops will be kept in readiness ('na izgotove') : the plan being that they should not come out at once to occupy these roads, since this would then mean provocation to be followed by bloodshed... What will happen is that the West will be told: "Americans, British and French, please, you are still free to go to BERLIN, but you must now deal with the GDR (for passes)....or if you wish to fly along the Corridor at the agreed height and on the agreed course, please do so, but you must approach the GDRs who now control all flights and grant the necessary permission accordingly for a certain time-table and number of flights...similarly for railways.....

25. S: If however the Americans, British and French refuse to deal with the GDRs and try to force their way through, then the Germans will start firing. And since the GDR forces are evidently not strong enough, then the Soviet tanks will come out and attack the forces with which the (the West) tried to ram their way through to BERLIN.

26. G: There is a small non-sequitur here: although one can block

.../off

off a road or railway, one cannot do so in the air. Consequently, this means that the GDR air force will have to shoot down the transport planes of the Western Allies - that is fire the first shot. S: If the West do not apply for permission or give notice of intention to fly to BERLIN since they do not wish to deal with the GDR and just send off a plane (without prior notification) then the Germans will fire at this plane (from the ground) or order their own planes into the air (to attack it)... although their (GDR) planes are in fact Soviet planes... G: Yes, but the first shot will be fired by them? S: Yes, (the first shot will be) theirs!

27. G: But what happens on the roads? Who will fire first? Will it not be the other way round? S: Wait a minute! Let us say that the scheduled plane didn't fly through since the Germans started firing at it. So then you go along the road - not in tanks or armoured cars - just in ordinary cars or lorries carrying people and food-supplies. You are stopped, but since you do not wish to have any dealings (discussions) with the GDRs, you press on - so they start firing first at you, i.e. "if they (the West) do not recognise our rights - then fire... arrest...destroy them!" Even though the West had not yet sent in their tanks...The West won't be the first to fire, they won't start firing till the others fire first, I fully understand that. But things will happen as I have just told you - this is absolutely certain and cast-iron. I heard this from MARSHCHOV himself - "if they (the West) refuse to talk with the GDR and try to press on to BERLIN regardless, then they will be kicked in the teeth!" I vouch for this with my life that I am telling the truth! And if the Western Command then decides to send in their tanks so as to clear the way through, then they will also send in their (GDR) own tanks!

28. G: Who was the source of the statement that if KHRUSHCHEV realises that there will be tremendous solid opposition from the West, then he will stop and not sign the treaty? Is this an opinion held by you or held by others or is it a fact based on policy that someone may have heard at say, a meeting of the Supreme Soviet or some other such meeting? S: This is an opinion held by us all and it was expressed to me firstly by General POKROVSKI as well as by many other officers, FEDOTOV among them. What MARSHCHOV said was as follows: "we are going ahead in a very risky gamble [idem ne bolshoi risk]...we are going to show absolute firmness because, so they say, history will not forgive the leaders of the Soviet Government and Communist Party, if once again they postpone matters and once again do not sign the agreement (with GDR)..." So I said " What do you mean we are going in on a risk - how so, Sergey Sergeevich?" and MARSHCHOV replied: "Because if they (the West) refuse to talk to the Germans, and the German (sentry) will bar the way and say "give me your propusk" and then the Americans will get excited and so the fighting will begin..." I mean local fighting...(deep sigh)...And many say "what nonsense - what for", and all of them confirmed this to me, FEDOTOV also... In MOSCOW this is a well known fact, the people in General Staff DO know all this and visualise how it is all going to happen... after all we are constantly breathing that atmosphere...! And when I name to you my various sources, I only give the names of people who are known to you and who are actually concerned (take an active part) in all this. Because if I hear something from some IVANOV or PETROV there is no point in telling you about it and even I myself forget about it by next day since these people mean nothing to you or me.

29. G: As soon as the agreement (with GDR) is signed, a battle alert will be instantly declared in the GDR...and for what purpose? For the purpose of countering any, as they (the Soviets) say, 'childish' gesture on the part of the Western Military commanders, the Western representatives in Germany as well as on the part of the FRG Germans themselves. And since their (GDR) forces are not sufficiently strong, consequently they are going to be supported by the Soviet forces in Germany who are being put on battle alert, in position of battle-readiness No.1....And this battle alert will be

.../echeloned

echeloned back to the forces on the territory of the Soviet
as those stationed on territories of satellite countries.

50. S: (because they are envisaging the following) ...and what if the Americans should suddenly send in several thousand tanks so as to unite the two Germanies - then battle will commence...what sort of battle? A local battle!...and to what depth of front will it extend? To the extent of the territory on which these troops will be located i.e. there will be no attack (by the Soviet forces) on the rear, on other countries where our (Eastern)troops are concentrated... There will be no such attack...because they (the Soviets) want everything to be decided in this particular sector: the area wherein the highways are and the railroads and in the air...i.e. in the sector where it is expected that the West will show, as they (the Soviets) say, 'disrespect' towards the GDR...where (the West will say to the GDR Sentry) go to hell, I won't show you my propusk...! and so a skirmish will begin in this Sector...

51. S: And if the West send out their tanks, then the Soviets will also send out their tanks in support...and so they will begin firing at each other...For that is how the whole thing is envisaged and planned and there is nothing clumsy in this, everything is absolutely clear cut... So once again I would like to repeat to you what my own ears have heard and how I understood the position....(this is the plan envisaged): They will only show force and bar the way (to the West) only in the event that the West will refuse to talk to them (the GDR)... and not that, say for instance that as soon as the Germans will take up frontier control positions and the West sees them, the West will start firing at them at once.... Neither (is it envisaged) that as soon as the Soviets will see the Western forces, they will start firing at them...but they will say "and on what grounds are you travelling on this territory? According to the agreement you should have permission for this from the Government of the GDR. If you have permission from the Government of the GDR to make a flight at such and such a time, then please go ahead!...".

52. S: And this is where KHRUSHCHEV, ULBRICHT and GROTEWOHL are being so clever. For they will say: "We are not limiting the entry of Americans, British and French (into BERLIN)..." But God forbid that this should lull the West into a feeling that there is no danger...because this is only the first step, i.e. once the time-table of movements (and permission for such movements) is in the GDR hands, then they can dictate the rules of the game, and continue to press through with their own will.

53. S: It is perfectly clear to us and we understand perfectly well that the Soviet Government has no right to sign an agreement with the Germans, but they are trying to support this action with armed strength... And (it is planned that)should the Americans, British, French and the FGR Germans refuse to talk and negotiate with the GDR concerning regulations for future use of communications with BERLIN, then they will be told: "No, stop, we must defend our rights according to the agreement... the Soviet authorities have gone and we are therefore a sovereign power in this territory..." But the Soviet forces will not leave, they will just retreat some distance nearby...and then, as the German (GDR) forces are weak - they haven't got anything such as a matter of fact I could tell you about it since I personally know more or less what they've got into this Sector, into this Zone, i.e. over the German territory as a whole. That is how the Soviets want it for the moment, they do not want to widen the area of hostilities, they do not want to turn it into another world war... This is the Soviet plan and this is where the gamble and the risk comes in. This is the risk VARENTSOV was talking about.

54. S: I could have easily proved all this to you if I could have recorded all such remarks as and when made to me had I been supplied with a pocket recorder. But this should be one of excellent quality, as apparently the GDR model is dreadful and makes ghastly rattling noises. and is consequently not being used by Soviet Intelligence.

55. S: This is what the Soviets are preparing for. And that is why

.../all

- the Soviet tanks and artillery will be thrown in - in great strength -

all manoeuvres and training is being done on a joint basis with all the WARSAW Pact countries, that is why there is urgent demand for equipment, for tanks....and especially the tanks are being given particular emphasis. The Western Commands should never suffer from the naive illusion that the Soviet Military and Government Organs have stopped developing tank forces. We have already spoken in April-May that what is taking place in the USSR is a re-allocation and partial reduction in Air Force and Navy, i.e. disbandment of unnecessary elements in Air and Naval forces...and this is done,why - not because the Soviet Government and High Command do not have a high regard for the Navy or Air Forces as such....Not at all, they are doing this because they consider that this disbandment can be compensated by the organising of a smaller but more specialised force with the introduction of new weapons, i.e. rockets of various calibers, diametres, and ranges...

36. Q: I will try to find out further details on this question...the exact vital moment... but [illegible] has already told us that he is taking his family out of Germany in September and all [illegible]'s officers are going to do the same.

37. S: It would be a very good thing if... actually I would like to meet sometime the [illegible] Minister [illegible] - although of course I realise I am much too small a minion for a man in his position.... to advise him to run special schools organised for teaching diversionary tactics so as to create absolute panic within the garrisons occupied by Soviet forces i.e. by starting fires, blowing up roads, communications, etc.... It would be like a mouse-trap then, and the Soviet forces will then start running round in circles and by the time they will start firing it will then be too late..! And if they are too late, with God's help the advantage will be ours... Because this is what they (the Soviets) are frightened of. And why are they so frightened? Because they know full well what the atmosphere is, how the Germans look upon them, how the Germans hate them... and they know full well that as soon as any skirmishing begins, the Germans will start throwing stones at them, beating them with sticks or guns - if they have them...

38. S: And just imagine what will happen then. [illegible] has all material in his brigade - [illegible] has two complete firing units: one already fitted with rockets ready to fire and the others are kept in the Brigade rear area. The Brigade actually has four firing units in all allocated for its initial mission although in fact there should be twelve in all spread out in depth, so that it is known that to a depth of several hundred kilometres all these rockets are going to [illegible]'s brigade only... so that if his depots are set on fire, several hundreds of his people popped up, just imagine the chaos! Everybody running in all directions at once. There will be no longer a unified brigade, no organised firing... And once they are out in the field they will start firing at once in all directions and at the GDR Germans, and at the FRG Germans, and at the Allied forces - all at once on a circular front - so they say! Once they are in combat deployment that is bad for our side....So it essential not to allow them to deploy in combat formation. Because, after all, they are sitting like in a mouse-trap....they are not sitting out in an open field now... because that would indeed be bad for the west if they were sitting in reserve positions so that it would then be very simple and quick to change to combat deployment....but they are doing nothing of the kind! They are sitting in a house - in wonderful accommodation with telephones, baths, bars and jass bands even... This is what they are afraid of - this is listed as the prime danger. And why should we not make use of this? For if we (the West) do not, history also will never forgive us for missing this opportunity!If we(the West) say: all right, let [illegible] do it according to the rule, wait for them to take up combat positions and then start firing!

39. S: Simultaneously organise diversionary groups so as to destroy as much as possible as quickly as possible...and then it would take the

.../Brigade

Brigade several days to re-organize itself, and that only after they have received new supplies of firing-units from the second Gear area, because everything in the front line would have been burned out....everything - all equipment and material....I do not consider that would be too difficult (for the West) to achieve! Because if some bold and decisive action is taken here, an awful lot of destruction can be achieved!

40. G: Another item for clarification. You remember you mentioned the existence of anti-missile missiles. Have you heard whether in this connection there exists some programme under [redacted]'s direction i.e. Institutes, factories, training courses concentrating on anti-rocket defense with rockets... S: I have taken a great interest in this myself and I know that what I was told is correct and that I have understood the situation correctly as follows: No device actually exists that is in fact a realistic, completed, workable device against a rocket attack. A serious and considerable amount of work however is being done on these lines...but this work which is carried out in the Scientific-Research Institutes, the NII8, not those under the jurisdiction of [redacted] or [redacted], but those under the Ministry of Defense itself. These Institutes are controlled by Special Technical Engineering Directorates in the Ministry of Defense or in GAU....An awful lot of brain-exhausting work has been done on this problem, but still no stable device that could be put into use as an anti-rocket has been worked out as yet. Some of course have been tested. I can absolutely vouch for that. And since the Rocket is Device No.1, this would be Device No.2 - an anti-rocket, but no such device has been perfected yet, although tremendous work and research is being done on this. Considerable sums of money have been allocated, quantities of scientific experts mobilized for this purpose in order to calculate the exact trajectory so as to meet the oncoming rocket with an explosion that would destroy it.

41. G: But could they adapt for instance, the V-75 or other ZUR's rockets for this purpose and if so are any attempts already being made on those lines? S: Yes, of course, they could adjust it, but so far this has not been worked out or approved...of course, they could since they already have rockets for such a height, a rocket that can be perfectly controlled by radio.... but not explode it on the trajectory of the oncoming rocket. But the whole complexity of the matter lies in the exact calculation of the exact moment of our firing of our rocket and to compute electronically all details determining height at which the other missile is travelling in order to be able to hit it. Even if they know the exact amount the enemy missile is fired they haven't got the means for working out the trajectory. One can't really adopt the method of firing against all possible trajectories for one given missile. It's too expensive. That is a question which is being studied very seriously.

42. G: Do they know anything about such tests at KAPUSTIN YAR or in KAZAKHSTAN? S: No, no-one has told me anything about this. You see, KAPUSTIN YAR and similar ranges in the ORVKA Military District - I am sure there must be other ranges, we just haven't discovered yet, they are so secret - any way all these places are used for testing equipment which is practically ready for issue to troops, or else equipment already in use which is being perfected. It is also used as a testing ground by Institutes. KAPUSTIN YAR is not connected in this matter you are asking about.

43. G: Can you tell us whether there is a programme for anti-ballistic missiles? Do they expect to have them within a year, two years? S: I can tell you that it will not be sooner than from one to three years. But they are working hard on it. Large sums are being spent. The Soviet doctrine in general assumes that for each new weapon a counter-weapon is to be found, once they build a tank they immediately create an anti-tank weapon; having created rockets they are now working on anti-rocket weapons. They also know that the enemy is working on the same lines. And the Soviets assume that in view of the enemy's high-level of electronic-computing techniques they are ahead. But the Intelligence people can't find out the exact degree.

44. G: Has Sergey Sergeyevich said anything to you about this?

.../:

S: All he has said was that we (the Soviets) are working on it. He has not said anything definite. Sergey Sergeyevich is worrying himself sick on account of the lack of trained personnel and the low level of computing techniques. I'll ask him about this and you can listen to his reply.

45. G: Assuming that the ADS system exists, would it be in the hands of PVO A.A. defence or would it have an independent command? S: PVO would have it primarily. Their troops are trained for this. There is no point in giving it to VASYUKOV. It has to be near the frontiers. Definitely it would be under the PVO.

46. G: What other rocket, besides the V-75 was shown at the May Day Parade? Two were shown. G: Was the second one also a ZUR39? G: Yes, a ZUR3. S: No, I haven't heard anything. Anyway I was here at the time. When they told me about the Parade they did not say anything about a new rocket. Perhaps it is another type of rocket, not a ZUR3. All right, I'll check. G: As you attended lectures at the Academy on the V-75, does this mean that this rocket will be issued to troops for their own defence? S: Yes. When you'll get the sketches you will see that it is used for defence of troops. This is also mentioned in the 1959 manual I gave you, but the exact type of rocket is not mentioned. The following troops are covered: large 2nd echelon troop concentrations, Army front HQ, Troops preparing for attack. Other troops, if means are available. The same system which was applied during World War II.

47. G: In the case of improved types of the same rockets, would the PVO be the first to get them? S: Yes, of course. They have always the first priority. Marshal of Artillery, KAZAKOV, Commander of PVO ground forces, his people are equipped for the defence of troops he has rifled A.A. weapons, he has some aircraft, and he will get the V-75 as and when it is produced. He probably has some already, I feel sure he has.

48. G: You said you were told at the lectures that you can have the rockets operate at 3,000 metres and up to 20 kilometres. Does this mean you can't operate at lower levels? S: You use other calibres for lower levels. The rockets developed velocity must be employed at high altitudes. At lower levels fighters or A.A. are used. I've already told you all about it.

49. S: The other thing I've given you is the rocket launched from an aircraft. There are 4 rockets carried by the plane.

50. G: There is one thing that is not clear. When they say that the range of the rocket is 40 km, the guidance is 10 to 20 km, which means that it can fly another 20 km. after the 7 seconds, how is it guided then since it has been cut off from ground control? S: Let me refer to the materials (S. is shown his notes). Which range are you referring to, horizontal or vertical? The second-stage assemblies of the rocket give you 40 km., the guiding ends after 20 km, as it is considered that after this height it will continue along the fixed trajectory, and it can be exploded by a special explosive device say at 25 km so that it flies 5 km without any guidance. It will fly for those extra 5 kms if 25 is set; or 10 kms if 30 is set along the direction in which it had been guided.

51. S: In this way by using the possibility of the flight of rocket V-75 for 40 km, the troops using it for firing say at a height of 25 km. accelerate it to the limit of control for 20km. calculating that the control up to 20 km. will give absolutely accurate flight in the same direction for the remainder of 5 km. with the help of rudders, the correcting assemblies etc. will come into action, it can operate at 29 and 30 km. That is why it is considered that the important thing with regard to this rocket is to keep it under control for those 20 km.

52. G: It is very important to know what happens when it explodes. S: I've written you in accurate detail about this. The only thing I have forgotten to tell you is the depth of the grooving (of the fragments). Those

.../grooves

grooves can be smaller and deeper, they don't all have the same depths. It is rather like jeweller's work. Where the grooves are smaller it will explode sooner, with a smaller number of fragments. The angle I have mentioned is achieved with the help of this cutting or grooving, as well as the number of splinters required. I gave you full details, the only thing I didn't speak about was the relationship between the depth of the grooving and the fragmentation. I repeat the type of grooving on the jacket, the number of fragments, and the method of "refining" [refinirovanie] the whole which breaks up into fragments, I've written you a detailed report about this, about 3600 fragments or as the notes stated. (Subject explains similarity to a hand-grenade). The grooving is done in such a way as to obtain a cone of fragments in the predetermined direction. The depth of the grooving is also one of the controlling elements.

53. Q: Here is another detail, as you are so interested. During this "refining" of the sections which gives you the fragments, they try to make all the fragments angular and to cut out wastage. The effort is to make the maximum number of fragments effective. They have been successful in this. They should disperse by predesignation in a cone toward the approaching target. Dispersal angle is 2°- 5° for fragments. The bursting angle of the whole is 10°. (This is all written in notes). The action of the fragments is guided, at a distance of 50 metres they can pierce steel armour. The distance is calculated on the guided action cone. It is always directed straight ahead. (Subject gives a demonstration during the conversation).

54. Q: Has the V-75 got an atomic warhead? A: No, and they don't consider it necessary for it to have one. They consider it a much too expensive entertainment just for one aircraft.

55. Q: Have you heard anything about K-25? A: It exists, but I do not know any technical details. It is older than V-75, but it has never been developed. It is one of the first. It appeared to be successful and they may go back to it. But you know they have so many variations.

56. Q: Will they develop missiles for low-flying aircraft? A: If you mean rockets, the answer is No. They believe that the enemy will not risk expensive new aircraft on a plate to the opposition (Soviets) by flying low and exposing it to ground fire.

57. Q: Are they considering developing more powerful rockets? May be engage the U.S. B-70 planes? A: No. They consider that at the present stage they've got sufficient, they have the V-75, they have aircraft with a ceiling of 30 km, these aircraft can carry rockets which will add another 4-5 km. Of course it would be nice to develop and have them, but you can't do everything at once.

58. Q: Do they intend to instal the V-75 or similar side on naval vessels? A: Yes. This is depending. These same rockets are being used. The same principle. I'll find out about the submarine for you. It has just not been one of the subjects I have dealt with at lectures, or anywhere else. I do not know where it is mounted.

59. Q: Did they give the V-75 to the Satellites because they have been given the V-75 is because [illegible] has decided it is time they had their own trained personnel and knew how to use this weapon. It does not mean that the Soviets have anything better. Anyway let me tell you that they only give very little to the Satellites. All that is happening is that this rocket is issued to the first troops occupying these countries. But they do train the Satellites in the use of them. Anyway they don't give them all the rockets. The more powerful and long range ones they keep for themselves, saying that they will be fired from Soviet territory by Soviet Troops.

.../60

60. Q: Have you heard anything about there being tiny hand operated rockets which could be used as A.A. by a soldier? S: The A.A. have certainly not got anything like this. I am certain of this. Perhaps they exist as new anti-tank weapons and haven't been issued to the troops yet. That I'll have to check on. There are a number of prototype weapons which have not been issued to the troops. I mean machine guns, automatic rifles.

61. Q: It has been noticed that around LENINGRAD they are building very many A.A. guided missile ( ) defences. But they appear to be a new type of defence not like the V-75 installation. Could you tell us anything about this? S: I think that your information that there are other types of rockets there is incorrect. The building is all done for the V-75 but also includes shelters, underground storage areas and platforms. LENINGRAD is not the only city affected. Such A.A. defences will be also built near , and other industrial centres, political centres, etc. It is all done for the V-75. Of course, it is possible that it will later be used for other rockets. I also doubt that anyone could have seen either the V-75 or any other rockets. Who ever gave you the information made a mistake, probably due to the fact that he is not a rocket expert.

62. Q: Could you get us some rocket designs? S: Yes, of course. The instruction manuals had blue-prints attached. I had wanted to copy them as I told you in the Spring, but I didn't have the time to do it. I also thought that if I gave you all the figures you would be able to do a sketch. I'll keep this in mind for the future. All you need to do is to blow up the shape of the rocket to actual size. Q: Of course all projections of the rocket such as stabilisers are of interest. S: I will do this. There are sketches folded in all rocket material. Stabilisers are all fairly standard for rockets.

63. S: When you gave us those figures for fuel pressure so many tons at a temperature of 5°, and for 27 tons a temperature of 40°, did you mean this to be minus 40° ? S: I will check (looks at his notes). Yes, of course, it should be minus. How can such a huge thrust difference occur at only a 10° change.

64. Q: Do you know what R.M.P. 75 means? This refers to the radar equipment. S: I think it is part of the launching assembly [puskovaya ustanovka] but here it is written rocket "aiming station" [stantsiya navedeniya] (radar station). In this case R.M.P. 75, is the aiming station for rocket V-75. This is connected with the R/T control. Let me tell you, it was jolly lucky for us that I was not sent to the LENINGRAD Staff courses. They would only have given us distances, combat possibilities, and tactical considerations in general. They would have taught us nothing at all about the rocket itself. These are all engineering details. All this is being studied at the Frunze Academy - Faculty No.3, radio-electronics.

65. Q: Did they compare the V-75 to the Western A.A. guided missiles? S: No. They only had general review lectures, right at the beginning, on the American, French, English and German rockets. I told you that for the German ones they talked about the "V". They gave us very little information on Western rockets. And I can judge by the assignments given to the Residentura that we have little information.

66. Q: Now, we have finished the chapter on V-75. We will now go on to unconventional weapons. Have you heard anything about this new wonderful weapon you have, about which KHRUSHCHEV has spoken, besides the atom powered engine? S: No. That is the only thing he could have meant. They are pressing to develop this atomic powered engine and the accident occurred because they were in such a hurry. He could have meant new types of aircraft. Let me tell you how I understand his statements as a General

Q.34

.../Staff

Staff officer. He has in mind atomic and hydrogen bombs, new type of aircraft, rockets which have already been approved, this he considers sufficient to brag about. But it is all very thinly spread. Put massed and directed against one target it could of course be effective. But he has no capability of hitting many targets. That he is yelling for peace to gain time.

67. Q: Has he got bacteriological weapons? A: Yes, he has. Q: Can we have any details about this? What types? Methods of employment? Storage depots? S: There is a manual dealing with chemical warfare, it may be dated 1959, but I will get it for you. I believe this is the latest. Q: Have you heard whether it is the Soviet intention to use these weapons? S: I've already told you and am repeating, there is a special Directorate dealing with this matter; there are chemical troops, there are secret firing ranges, where chemical and bacteriological warfare are being tested. They intend to use these jointly with other types of weapons in order to increase the effects of the attack. Q: Do they intend to use it in response to the enemy's using it, or do they intend to be the first to do so? S: They have two options planned: in the case of a surprise attack everything will be thrown in, otherwise should the enemy during the course of a war use chemical and bacteriological means they will reply. If on the other hand they adopt the doctrine of being the first ones to disrupt everything, to prevent receiving a decisive hit from the enemy in response, they will throw in chemical and bacteriological weapons. A lot is being prepared. You can't disregard this in your planning.

68. Q: During the last world war the Germans and the other combatants did not use poison gas. S: The Soviet troops were equipped with chemical shells. I had them myself. They were not supplied to the firing positions, but I knew that my regiment had rear area supplies. In the same way that all artillery had been ordered to destroy the enemy tanks, in the same way the chemical troops would have had orders to go all out. I held one of these chemical shells in my hands, but there were none at the front, they were at the army group held against emergency. Now, you have asked by what means the bacteriological and chemical weapons are going to be used. Of course, the most important part is to be played by the air force. Special tanks, which will be fitted to aircraft, are in existence. The dissemination will be by spraying certain determined areas. They also have chemical shells which can be fitted to rockets to the war-head. VARENTSOV has these. There are special containers for fitting to the war-head, filled with chemical or bacteriological solutions. All the "rocket carriers" [maiteli raket] will be chemical-bacteriological carriers. All this has already been studied; there is a Directorate at GHQ, headed by a Colonel-General dealing with these matters (VOLKOVEN).

69. Q: Have you heard that the Sputnik can be used not only for military purposes but also can be used as an atomic weapon? S: I have not heard this. But I have heard that it is very difficult to adapt the sputniks for correcting the aiming of atomic weapons, due to the cosmic speed at which the sputnik travels. I know that they are working on this. GAGARIN has made his flight on which he took photographs of certain sectors [otsechki], although they said there were no cameras installed. There was a complex of various types and sizes of cameras, which he switched on automatically. KHRUSHCHEV and the press lied when they said at the time we launched the man that nothing was photographed and no information collected. Q: Who told you this? S: A number of people told me that on this Sputnik, and in fact on every Sputnik, they try to instal all sorts of optical instruments, photographic instruments, for taking photographs. GAGARIN was given all equipment. By the way, I must tell you that General Staff were livid when they learnt that the Americans had launched a Sputnik travelling over Soviet territory. They said that this was a Spy-Sputnik.

.../They

areas in the mountains, where tests are being prepared, but they have no concrete information that bombs have actually been tested in these places.

77. G: Have they got intermediary atomic shells between 5 and 30 kilotons. S: Yes. They have them. I have fired them.(simulated problem). They have special tables, for 10, for 15 kilotons. I didn't have my Minox otherwise I would have photographed the tables. These weapons are for use with rockets, for "R-2" and "R-11". For atomic guns they used 5 kiloton shells. There were no 10 kiloton shells mentioned, only 5. (subject makes a drawing showing where the troops are located and what the troop safety line is).

78. G: Are great numbers of these atomic guns in operational use? S: Yes. G: Have they got them in GDR? S: I think so. I don't know for certain, but there are a great number of them being produced. G: Are all your troops using them? S: Yes, I think so. G: Did [illegible] tell you whether there are such guns there? S: I didn't ask him, you hadn't told me you want to know (joking). G: Under whose command do they come? S: Under [illegible]. They are the GDR reserve (RAK) for ground forces. For GDR they are in [illegible]'s hands, but [illegible] is subordinate entirely to [illegible]. [illegible] knows these guns and has told me he believes in them, they are good guns. [illegible] has been given the 5-ton atomic gun. I don't think there are any others. They have not been tested with atomic shells; they have been tested with High Explosive shells, pretending they were atomic ones. Nor have they used them for warfare.

79. G: How do they know that the gun won't blow up when they do use atomic shells unless it is tested? S: Well, they have made all the calculations. (subject repeats vehemently a number of times that no atomic shells have been fired. He had asked instructors and [illegible] (he thinks), who has worked in GDR). S: The task was to test the gun and its reliability using High Explosive shells. They have had other trotyl equivalent tests, but not by using guns and mortars. They have dropped these bombs from aircraft, very accurately, as the trajectory was observed from the ground, after release. I've told you about this. I will check on this; you have confused me, although I am very sure that the guns were not tested with atomic shells. But the dummy shells were calculated to the last milimetre to represent the atomic ones. We were shown films dealing with Soviet atom tests. All sorts of structures, animals, vehicles etc. were placed at various distances to test destructive effects. Pressures developed during an atomic explosion were recorded by a steel assembly made in the form of a steel shaft, a steel pad and a membrane which records by grooves on the metal. These grooves register the pressure, say a hundred thousand kilos.

80. G: What is the ratio of High Explosive to nuclear warheads for "R-1", "R-2" and "R-11"? S: I can't give you the exact ratio, but this is the principle they work on. Everything has first got to be prepared for the conventional, High Explosive warheads. If a crisis arises and they decide to busy Capitalism, then the lot will be transferred to atomic warheads. If the war is a chivalrous one, not an atomic or hydrogen one, then the rockets will carry High Explosive warheads, trotyl cordol, etc. I don't know the exact figures, but I think that the ratio is for say 100 rockets, you will have 10 atomic warheads for 90 High Explosive warheads. This is what I gathered from lectures, although no specific figures were given. The atomic warheads are manufactured and stored separately. Of course, what can happen is that they decide to fire atomic rockets in a certain theatre of war, and then they will supply only atomic warheads, for the 100 rockets. However, this is only conjecture; this must be questioned.

81. G: Who is in charge of the distribution of nuclear warheads? At what level? S: [illegible] controls their production, and stores them. The

.../front

brought this matter to your attention now is that it is possible I will be leaving the Committee in a few months time. That is why it is important for me to have firm foreign acquaintanceships established with whom I could continue working, with the knowledge of my superiors, and not in the line of my work for the Committee, receptions to which I would go as a personal friend.

95. S: What can happen to me? They might prepare to send me to England - please God! Or [redacted] might give the order "return him to the 'Apparatus', to [redacted]". He can either make me the Deputy Head of a Rezydenturye or even the Head of a Rezydenturye. That would also be a good thing, please God. I would then remain in [redacted], and could go on seeing old acquaintances from time to time. It would still not rouse comment; after all, I must be polite, greet people if I meet them, keep up 'diplomatic behaviour'. Should someone go away, you could introduce someone else to me. It was not by chance that I, for this reason, proposed [redacted] to you. I say this as an example. My proposals may be the right ones or the wrong ones.

96. J: Would you be in uniform if you returned to [redacted], and could you then meet foreign military attaches? S: No. I will be in civilian dress. Even in [redacted], and even in the 'apparatus', I will serve in [redacted], but will walk about (in the same dress) as I am doing now. Should there be a war then I will be back in uniform. Q: In reverse, could you put on uniform in [redacted] to meet, say a Military Attache? S: I would have to consult my superiors about this. They might reply: "This would be difficult. Why should we try to throw dust in their eyes. They have already acknowledged you, and let you into England twice already as a man who has had his discharge [illegible] and here you are again appearing in uniform in front of them". Q: Yes, that is true.

97. S: I can maintain friendly relations with people who might be useful if I once had a solid introduction. I do not need to engage in agent activities; I can study him for a year. J: How would you meet such individuals? In a restaurant? S: I will tell you the chain. I will tell you how we are instructed in this, and what is required of us. Well, I have become acquainted with a man at a reception; I've met him once or twice. I have already reported that I am acquainted with him. He appears to be a sympathetic individual to whom it is worth paying attention. This is already the art of the intelligence officer, whether it is worth cultivating him for three months, six or a year. After a few meetings he (the Intelligence Officer) suddenly receives an invitation from the contact to a celebration, say the birthday of contact's wife. They are interested in the man, so he goes. Or I can ask for official funds to entertain the man in a restaurant, in order to get to know him better, i.e. I can keep closer contact on my own initiative with a man on whom I am known to be working.

98. J: On seeing a group of Americans or British in a restaurant, say diplomats, you could escape acquaintance with them? S: It would not be well looked upon if I had never met them before. We are not permitted to associate with people if we are not acquainted with them, i.e. no pick ups with foreigners.

99. S: If after proper introduction, I were to say that I think it would be worth while to spend some time on a foreigner, who might be of interest and use, I would be told to go ahead, as this is my active initiative. I need firm acquaintanceships of this sort on which I can be actively working in view of my possible change of occupation this autumn, after my holidays. Officers working in [redacted] do invite Diplomts to restaurants, as for instance, the 1st Secretary of the Afghan Embassy was invited, and others. [redacted], for instance,

.../who

180. G: Let us stop on the 2'n to-day, we will continue to-morrow. S: So it was a good idea to have photographed this? G: Yes, of course.

185. G: Is there a LAZAREV there in Cadres? S: Indeed he is Colonel LAZAREV.

184. S: IVANOV is to go to the 1st Otdel, he has been promoted Colonel, while LAZAREV is probably there too.

185. G: Do you remember AZAV? S: No, I can't.

186. G: Do you have a NOVIKOV there, he has gold teeth, he is a Colonel. S: Yes, I know him and incidentally how about my dentist? G: To-day an appointment is being booked for you.

187. Subject makes his request for tape recorder, including a pocket model, etc. Subject says he is free when he wants to be free in relation to his missions. If he can fix the 'ANITA' matter up quickly, he'll 'spit' on them! He arrives at the Embassy every morning at 9, 'he' sees him, at ten to ten he has finished breakfast and goes out for ten minutes. At the Embassy he has discussions, answers any questions they may have for him, drops in to see them from time to time, etc., sits there for a time, but after that he has his own business to attend to, both the Committee's business and GRU's business, after all, he has to take care of his missions.

188. Subject lists his local programme, purchases he wishes to make, etc. Subject says he will be free anytime during the afternoon the next day to see the Doctor. Subject left at 1915 hours on 24th July, 1961.

Meeting No.23

1. Subject arrived at 1510 hours on 20th July, 1961

2. Subject opens package and shows EXACTA camera.
S: They have 4 types of camera: one EXACTA, one cine-camera, a new German one, and two ordinary Soviet ones. I got this from PAVLOV, yesterday, for my trip to STAMFORD. This camera is now loaded with a British made film (ILFORD). I brought this for you to take the number etc. in case operational use is made with this camera in the future - and secondly I'd like to have the photographic instructor to tell me how best to use it. I have an exposure and time chart here which they gave me, and I would like it checked.
C: That is fine, we will do all this before you go on your trip.

3. S: I have one very interesting thing to tell you. I was even thinking of calling you yesterday. SHAPOVALOV came up to me yesterday after I had had my conversation with PAVLOV, and said "Oleg Vladimirovich I would like your advice, you are my former boss, I've some trouble concerning my work". Before that I had read a telegram from SEMOV enquiring about his family, a reply has been sent mentioning the £20 loan and the shopping expedition. PAVLOV has already sent off the telegram about ANITA, here is the text: "During the British Industries Fair in MOSCOW, such and such a firm exhibited two prototypes of a portable computer ANITA. At the present time the firm has signed a great number of contracts with certain capitalist countries for the supply of this machine (mentioning October). During the fair our specialists in MOSCOW considered the advisability of acquiring the ANITA computer. The English firm had then replied that they can only sell it on the basis of one thousand at a time. The English specialist who maintains scientific - technical relations with the Committee has promised (Subject's name) to obtain an ANITA machine against cash down and subsequently pass it on to us. The price of the machine is £400. Please reply urgently whether it is advisable to give this sum, via (Subject's name) to the British specialist or there may be the possibility of repayment after delivery of the machine. Let us have your instructions."

4. C: Did you mention the dates of the exhibition? S: No, I gave PAVLOV all the other details orally. He asked me to thank [illegible] and to arrange a meeting with [illegible] at the Embassy at 10 o'clock on Monday. VOROHIN came in and told PAVLOV and me that he is leaving LONDON by air on either Saturday or Sunday.

5. S: Then I went with SHAPOVALOV to his office. I have been in five rooms already which are involved with intelligence work, I will draw it up for you later. SHAPOVALOV's trouble consists in the fact that the "Centre" had ordered him to drop his Indian contact as he was suspected of being an "agent-provocateur". The Indian in question is a journalist, a young man, representative of an insignificant Indian paper. I reported this to you in the Spring. His name begins with K, and on the 23rd July he is supposed to have gone on a trip to PRC, as a member of a delegation of journalists

...../.Invited

APPROVED FOR RELEASE
1 MAR 1992

21. Subject then refers to Van VLIET and how displeased he was by his transfer from MOSCOW. G.Explains that van VLIET was removed because of woman trouble. S. The people in the (Soviet) Ministry of Foreign Trade, who have spoken to me about him, were of a very low opinion as to his abilities. They thought him a fool. Subject then repeats that SMITH, the Ambassador, treats him (Subject) in a very friendly manner.

22. S: Now, about MERRIMAN, I am to ring him? H: Yes. S: All right. And think about McBRIDE. On the 31st I will take WINNE to meet PAVLOV. Prior to my departure I need receipts, hotel bills, which WINNE should obtain for me.

23. Subject mentions the Zenith radio, and George tells him to be silent and look. The radio is shown him. George explains in detail that this radio is being given him to show him we are sympathetic to his wishes as good friends. The gift is from the heart against our better judgement and should show him that money is no problem but security is. Therefore, the tape recorder (personal use) is out since he would be suspect having it and risk a disaster by trying to record VARENTSOV if the latter should visit subject.

24. Furthermore Subject should abide by our advice and decisions re future requests of a security risk nature and minimise his acquisitive desires. Subject was visibly touched and thanked us profusely.

25. S: However I'll have WINNE take it in, rather than taking it now. (The set was removed from its packing box and Subject was shown its components, operation etc. Its unpacked size permits it to be carried in a normal suitcase easily. Subject reassured us that he can easily legend his having obtained the set in the Comission store. He explained how it is registered, how easily it can go through customs, etc. Since WINNE had requested to postpone his trip to the USSR till 26th August due to his son's sudden apendectomy, the schedule was reviewed and to permit Subject's leave Janet and husband's leave and WINNE's arrival to fit in, the 23rd August was decided upon.)

26. G: Regarding the military article you wanted our help to write; it seems that since you are an artillery officer and have been given access to the PTURS data by VARENTSOV, and other artillery studies; you should look over the material inthe GRU spetsfond to see what manuals or data there is on the same subject - anti-tank weapons, are from Anglo-American Military material - and give us the bibliography. S: I'll consider this and I will get a list of subjects and magazines dealing with Anglo-American forces which KORENETSKI's people hold in the GRU Information Directorate. I will even expand the subject matter, maybe an infantry topic would be O.K. I will also try and send photocopies of my other papers and articles which I can get - through WINNE.

27. G: Just send us a bibliography. S: I will send you a complete list of what we have on your forces. Then if you can send me the material back I'll work it over properly.

28. G: Now to reassure you that your information is definitely reaching our leaders - here is a report on President KENNEDY's speech. I won't read it to you but I can point out to you that in a number of statements, exactly those thoughts which you suggested were mentioned. (Subject was delighted).

/29. ....

29. S: I reported to you last Spring about the situation at the time of KhRUShChEV's coming to power. When he kicked out the opposition - MALENKOV - etc. There was even three days when he was not in power. KhRUShChEV is adopting the same technique with the Army he had previously with the Party officials. During his "reign" he has personally promoted approximately 1500 officers to Generals out of a total of 4 - 5000, and also promoted a number of old Generals to higher ranks, up to the rank of Marshal, and even Chief Marshal. He relies on their support. But both in the Presidium and in the Central Committee there are still a number of people who supported MALENKOV, MOLOTOV, BULGANIN, etc. PERVUKhIN is one of them. There are also unconfirmed rumours that KhRUShChEV fights occasionally with MIKOYaN. MIKOYaN is in opposition with regard to some of KhRUShChEV's opinions, arrangements etc. KhRUShChEV is not popular with the masses. They do not care for his jokes, comments, etc. They blame him for the miserable life they have to live. We know he is a political adventurer.

30. S: Among the leaders (rukovodstvo) there exists a secret opposition, which remains secret because the majority are still KhRUShChEV's proteges and the others don't want to lose their jobs. But there could be a distribution of forces and a split as a result of the BERLIN question. All of them who are aware of the weak points, with regard to the economic and military situations, who will say "It is too early to go to war." We've got to wait. What's the point of heating up the situation because of a BERLIN which has existed for the last 16 years." Should this occur, it is possible the KhRUShChEV will carry the day and win once again, on the other hand the reverse might happen. We have to take this into consideration. They could either remove KhRUShChEV, saying he was ill or else he might resign - as MALENKOV did, or they could say "You go on being the boss, but let's r treat on the BERLIN question, let's think something up." Let's say outright that we are defenders of the peace, the Anglo-Americans have taken the extreme view of our declaration and are preparing for war, we don't want war, there's no hurry, we'll settle the BERLIN question oneday". There are lots of diplomatic words that can be found in order to meet the situation and to fool the people and lie again.

31. The 22nd Congress will decide what action is to be taken. It doesn't appear on the Agenda, but as I have told you before whenever there is one of these big gatherings they have secret sessions, the plenum, the praesidium, and I am positive that this matter will be discussed, it might even be discussed before the official opening of the Congress. So we must keep in mind these three possibilities. (Subject continues on this theme for some time, repeating roughly what he has already said.) - Namely:

1) KhRUShChEV may crush all opposition and proceed to sign East German peace treaty, inviting local hostilities and risking general war.

2) KhRUShChEV may be forced to compromise and delay signing peac treaty in view of Western opposition and propagandize this more as his desire for peace - still postponing possible action re East Germany and Berlin to a further date.

3) KhRUShChEV may be deposed.

/ 32. .....

you, my good friends, is that you understand me correctly and have no doubts. You should not laugh at my request to kiss the Queen's hand. All you need to say is that I have not yet reached such a stature to deserve this and in that case all I have to do is to work, work, work.

27. S: Our work has been progressing properly and seriously. Your guidance has been top grade and in fact I know that with your consultations not only you but one hundred people are working on our materials. At the same time, however, I beg you to understand me and not to be offended by such requests. Although my morale is excellent, after all, I am a soldier, not a young girl. I do feel slightly hurt and at a loss to understand why, if the work I have done is indeed valued, why I am refused this gesture which would mean so much to me in the sense of my morale. Materially I am more than spoiled and I am indeed deeply grateful for all that has been done for me in this respect. All I can say for this is many times thanks. I do feel, however, that others before me who also did so much to help the West were perhaps shown more appreciation and more encouragement by prominent people personally, purely from the morale point of view. I do appreciate that Lord MOUNTBATTEN's representative met me but I think if there were more trust in me---. Perhaps you have not studied me enough to feel sure, but I think that a request for such recognition is correct.

28. S: I think if I were a big man and a soldier--such as I am--would come to serve, I would consider such a recognition proper and desirable, and I would find time to meet, inspire and thank such a soldier. If there is not enough yet to thank me for, then let's not talk any more about it. Maybe it will take another six months or a year but understand me correctly. Perhaps I am a romantic; after all romanticism is an integral part of the work I am doing. Although I am slightly hurt I would have never brought the matter up at all, had it not been raised officially by you. I have given myself heart and soul. All my thoughts and feeling I have dedicated to this work. In spite of all the difficulties facing me I have surmounted many obstacles to achieve what I planned. Why couldn't some enthusiasm, some encouragement be shown to me in exchange by your leaders of the West? Of course if I have not yet earned this, then all is clear and I will continue to work to earn it. Such encouragement is essential to me more especially if say, in a month's time I am caught and finished! What if say, they would raise a fireman's ladder outside my window and catch me in the act of photographing documents when I myself think I am not observed? Maybe I will be forced to come out in a month's time. All this I mention as negatives and reject them.

APPROVED FOR RELEASE 31 MAR 1992

improvement of our collaboration. I am convinced that the tempo of my work will increase considerably in the near future and that is the reason why I have asked that meetings should now take place weekly, so as to enable me to hand over the considerable material I will prepare for the Western Governments, covering all problems of interest. Finally, my tasks are now clearer to me and since I have the opportunity to increase my activities, I will fulfill these tasks to the full. I raise my glass to drink a toast of gratitude.

25. S: To tell the truth, there is another reason why I wanted to speak personally to someone from the Western High Commands; that is not because I have any secrets from you (my case officers), but because I have a request to make. I am happy that I am at least able to state my wish via the microphone now. It is almost two years since I started gathering material for you, but I consider that I have now been in active cooperation with you for three months. Three months is also a significant time period. I am most grateful and satisfied with my collaboration with you in this room, and wish to thank my American and British leaders for all the help and encouragement given me, and ask the said leaders to thank their case officers for their hard work during these three months. Three months may seem little, but is much when considered as a period of active work in Intelligence. This work will become even more active, and for this reason I ask for weekly contacts starting from October.

26. S: I would like to ask my leaders to thank you for the great work which you have carried out. If necessary, let them take from my own personal means, from the sums which are already at my disposal -- I ask my leaders to give each of you £ 1,000. JANET, the photographer and wireless operator, £ 250 each; while all the technical secretaries, the workers, translators, etc., should receive £ 100 each!! This is from me, my modest present, and I ask my Governments once more, and their command, to fulfill this request. I am grateful that you have rewarded WYNNE and the American instructors I contacted and in appreciation of the fine work, support, advice, and inspiration you have given me, in addition to the farewell kiss and brotherly handshake I will give you in parting, I make this request for the material expression of my gratitude. (He is thanked and told that everyone would be happy to work with him if they didn't receive a farthing! He is told that he has always been considered "one of us". He is thanked for everything he has done, is doing and will do, and is promised full support in his work. Speeches of thanks and toasts continue. He sends greetings and thanks to everyone he knows and those co-workers of his that he hopes to meet in the future. It is emphasized to Subject that however important the material is that he hopes to get

APPROVED FOR RELEASE
31 MAR 1992

for us, to photograph, etc., he must always remember that his continued personal safety takes priority; he must not run any unnecessary risks in order to get material for us.) S: For me it is not only your respect, for me it is your order. (In English.)

27. (A social interlude follows, with more toasts and light jokes.) S: Let us all sit down, as per custom, before parting. It is nice to meet with you and hard to part. I think of you daily as you of me. We have worked out quite a satisfactory long "tail" for all contingencies in the matter of communications, which is very important as there may be changes in my work. However, whatever the changes are, I will remain in Moscow. They may take me into the General Staff, away from the Committee, in which case we will change over to pure agent-type contacts. Only. Well, we can operate on the basis of the old acquaintanceship with JANET. This is very intelligent, firm and correct. However, we must hurry to organize my actual possibility for this acquaintanceship, the official introduction. (Subject is assured that this is borne in mind.) S: Then I can spit on everything that comes. I can meet the husband anywhere, accidentally, on the street, greet him, ask about JANET, etc.

28. S: Let me review. I thought everything over; asked about everything; and reported everything. The plan is clear. H: This was an excellent opportunity to clear up all points which were unclear previously. S: Some of the questions put to me related to material which I had either already forgotten about, or about which I did not know very much. G: No one can be expected to know everything. S: The more so when bearing in mind the security control -- the pass for the 1st Directorate is one; you need another one for the 2nd Directorate. Or rather, the model of the pass is the same, but the marks on it are different; the designations are different. There are designations and signatures. Why do I call them designations or markings? There is an expression for this. The guard immediately looks at this marking; he lets a lot of people through quickly; he looks at the marking; he doesn't look even at the photograph and your face; he knows the marking. After all, they arrive in a crowd and leave in one too, before and after work. Well, in the middle of the working day, when it is dull, you can go in and out a hundred times.

29. S: This time we were unable to go over an operational car. If a car could be shown to me next time, I will show all the spots which are used on it because, "despite all ingenuity, there is a pattern". A car is a car ...with all the same components, so there is a pattern. The hiding places have been intelligently chosen, are commodious, and are utilized intelligently. It is important that I should show all this to you, as it

Because VARENTSOV has a Head of Intelligence Section (NACHEL'NIK RAZVEDOTDELA), Colonel ZAIKA. This very same Colonel ZAIKA was the head of the Intelligence Section on the 1st Ukrainian Front, and he (VARENTSOV) is keeping him (ZAIKA) with him at present. Insofar as I have Intelligence training, I can immediately concentrate and prepare myself for work on Combat Arm Intelligence, in this case on rockets. G: One must bear the following in mind -- after all, everything happens in this life -- perhaps after six months have passed VARENTSOV may suddenly die of a heart attack. S: It happens. It may happen. G: He is, after all, in his 60th year. S: Quite right. G: Then these ties may prove non-permanent. One must take this into account. S: I must tell you that for the sake of VARENTSOV's memory KARIAFILI will always stretch out a helping hand to me. They can't all die of a heart attack at once -- his deputies. After all, they won't turn their backs on me all at once, but if they do -- there are my distant relatives, the (Subject's last name, plural). If you say, " go to the Far East and work in from there we'll collect you by submarine and take you to Japan when necessary; go with your family to such and such a harbor for a fishing trip and then row out a few miles in a rowing boat." That is also an alternative! In Khabarovsk, there is exactly the same as in Moscow regarding the Army -- and the Khabarovsk, the Far Eastern OKRUG (region). There is no Khabarovsk OKRUG; it's the Far Eastern one. The staff is in Khabarovsk. It's also important. And there is the same material in Riga and in Khabarovsk and anywhere else. It's the same one as in Moscow and in its surroundings.

33. S: And I can tell you that this year there is going to be a very big sounding out as to what they intend to do with me. There is division here, two opinions. Some wish to make me a General and bring me on, because I have become ripe for this, have sufficient education, experience and age. While others keep a brake on me, like SHUMSKIY and those below him -- and those at the Central Committee, because of my father. It is still a riddle to me how this matter of my father became known. I ask you to help me in this -- to clear things up. Why was it not known before, that my father was a White Guard Officer? Why? If it had been known earlier, they would have told me about it earlier. They would not have let me go to Turkey on a long mission. At the same time, only thanks to the fact that I served extremely well in the Soviet Army; was on political work; was in three campaigns; was decorated on the Front; twice commanded a Regiment; fulfilled my tasks with a fine efficiency report.... Wherever I was, in all fields, in all fields in my official duties .... then I learned a lot. They, of course, take that into account; they have to take it into account. But what do you think? You are intelligent people. Why did the matter of my father become known? Why wasn't it known before. G: They dug and dug, and got to the bottom. S:

Phase III - PARIS

Meeting No.31

20th September, 1961

1. Subject signalled properly in MOSCOW as directed on 19th September at 21.50 hours indicating that he would arrive on the second day. Actually he came on the following day, the 20th September, on the AEROFLOT flight, a TU-104 via COPENHAGEN. TARRY met him at Le Bourget but did not approach subject. Subject contacted TARRY outside the terminal and was driven by him to his hotel, the Cayre. During this ride subject passed TARRY a package of eleven cassettes of undeveloped Minox film, the contents of which were mentioned at the meeting later. TARRY notified Roger who picked up the cassettes from TARRY and sent them off via courier to LONDON for processing. Roger instructed TARRY to drop off subject at 1930 hours on the opposite side of the Solferino footbridge from the RV point at which Mike and George planned to pick up subject by car. Subject crossed the bridge to the RV point at exactly 19.30 and he spotted George. He followed George along the river bank to the parked car and was driven to the safe apartment arriving there at 19.50 hours.

2. After preliminary hearty greetings, during which subject presented Joseph, Mike and George with caviar and a Georgian "Horn of Plenty" the party waited for the arrival of Harold, who came about 20.20 hours from Orly Airport where he had just arrived from LONDON. He was also presented with the same gifts.

3. Prior to Harold's arrival subject stated that his trip was delayed until he had received his visa from the French on 19th September. His T.D.Y. was authorised for twenty-five days. He left his Travel Order with us to be photographed. Subject enquired if his previously passed material via TARRY in MOSCOW turned out well photographically and he was reassured that it had.

...../4.

APPROVED FOR RELEASE
31 MAR 1992

#31

4. S.: In the KREMLEVKA telephone directory it states that only secret material may be discussed but not Top Secret. Of course, this doesn't mean a thing and they speak of Top Secret matters because who can classify mentally where the borderline is.

5. At this point subject was introduced to Roger and subject presented Roger with a jar of caviar. He also brought a package of select cigarettes and caviar for Janet in the event that she would be in PARIS. During the toasting with wine, while waiting for Harold, subject stated that his wife was expecting in seven months and was duly congratulated.

6. S.: This is exactly the fifth month anniversary of our having met on the 20th April. I want to wait for Harold so I will not repeat myself, but I have much significant material to tell you about, some of which comes directly from the mouths of MALINOVSKY and a prominent worker of the Central Committee, CHURAYEV. I regret that I did not have a small tape recorder, as I could have given you the tape just like the film cassettes. It would have saved me much work but I tried to remember exactly what was said and have written it down. The situation over all looks very bad. This old man is striving to accomplish some fantastic coup during his lifetime. KHRUSHCHEV is stirring up all of the trouble that there is. He is the instigator of everything. He is the formulator and the executor of all this dirty business and adventurism. If he died or was killed it would relieve and change the situation considerably to our advantage. It seems that he knows he has not many years to live and he wants to do something like a maniac, which stems from his senility.

7. While we are waiting, let me report on what I have photographed. I have photographed the card index lists which include the military manuals and regulations of the U.S.A., Great Britain, France, Federal Germany and a little on Italy. There were about 100 items listed. At that time I sent you only a few extracted titles as a guide for the article I wanted you to prepare for me, but recently I had the opportunity of photographing the

...../whole card

whole card file and this included about a hundred items. I did this at GRU. I laid out the lists and took up to three shots of each one according to what would fit in the exposure frame. Now you can select any theme for me.

8. G.: Will all of those manuals be available to you as a reference in the future?

S.: Absolutely. Any one of them at any time. All I do is to ask for an item by our catalogue index number.

G.: On which country were there the most materials?

S.: The majority were on U.S.A., then on England and the Federal Republic. There was less on France and only a little on Italy. I only photographed the materials which were dated 1958, 1959 and 1960 because the older ones such as 1952 or 1955 are already obsolete. I would say that the sources producing this are located in neutral countries such as the sergeant in Ceylon about whom I spoke before.

9. M.: What else did you photograph?

S.: I photographed all remaining articles completely in the first two issues of the sbornik for both the years 1960 and 1961. In addition to this I photographed some new articles (there were three issues of the sbornik in 1960 and thus far in 1961, there may be another issue, the fourth, in 1961 which has not yet been published). In addition I photographed artillery articles which covered geodetic computations and artillery reconnaissance. There were four articles and I covered those published in 1958, 1959 and 1960 on the above subjects, but there were many, many more which I have not yet photographed. I did not yet have a chance to get my hands on strategic intelligence lectures at GRU. I used a total of eleven cassettes for all this photography and I have left exactly forty cassettes.

G.: You photographed the sbornik articles at GRU, but where did you photograph the artillery articles?

S.: At VARENTsOV's Headquarters. At that place I was worried because a ray of light was coming through the window when I photographed.

...../ I could not

I could not go closer to the window for fear that someone would spot me and in moving back it was too dark. There could be a sunspot on the page and I would like to know if they come out clear. I also photographed the telephone directory of the Soviet Government.

G.: Do not many people also appear in the KREMLEVKA?

S.: Yes, but the KREMLEVKA has many other lower officials in it.

S.: If necessary I could re-photograph them but I hate to repeat.

G.: We will see how they come out but it seems that they may be legible because you had a sunspot on several sheets of your last photography but it could be read.

10. S.: I have two cassettes which cover the proposed plan of the Committee for sending delegations all over the world during the first quarter of 1962. This should be of great interest because it states exactly from which organisation how many individuals are designated for each delegation; e.g. from the Ministry of Defence, from the Committee on Electronics etc. It designates all of their postal numbers and categories of specialists. That is all of my photography, but in addition I stole our Committee telephone directory and passed it to you. There were nine hundred copies published.

G.: Have any officers such as yourself been designated as members of the delegations you mention?

S.: No. No-one is mentioned by name. All that is stated is that one or more people from our Committee will be sent in such and such a delegation and similarly a number of persons from all other scientific or industrial organisations. That is the formulated and approved plan but the individual will be selected later.

11. G.: What are your own future prospects now?

S.: It all depends on the attitude of the Central Committee. Just prior to this trip they requested a new ~~personnel file~~ clearing report (kharakteristika) on me. There has even been a proposal approved by two generals in GRU that I be sent for a tour to WASHINGTON as a Counsellor. However, all this depends on the Central Committee.

G.: What slot would this be?

...../S.: GRU of course.

S.: GRU of course. Two generals called me to talk about it but how it would go on from there will depend how they regard the story of my father. I have only come on this trip because no negative statements were submitted by the "neighbours" against me personally. In addition I had some good results from my last trip and received a commendation. They say that I can produce some results and that I make a good effort and in addition I bring them presents, about which I will tell you later.

M.: What did your wife say when you were coming here?

S.: She was crying and screaming because she speaks French and she would be in Seventh Heaven here.

G.: Who wrote up your kharakteristika?

S.: I read it, GRU wrote it up and submitted it to the Central Committee. They merely called up GVISHIANI and he said on the telephone that he agreed that I should be sent.

12. S.: Even though the situation looks very bad I am very glad that our governments have displayed such firmness and decisiveness. The Soviets did not expect such a firm stand. This has placed them in a position of concern and MIKOYAN does not get along at all with KHRUSHCHEV. They are still not sure of themselves and they know they do not have everything that they need. They can launch a nuclear attack and destroy several cities and 10 million people but that will not solve all of their problems. I won't go into that now and jump around from one topic to another, I will wait till Harold comes.

13. S.: We can work tonight until we become tired and tomorrow at 0900 hours I must be at the Embassy where I must have a talk with the Rezident, a Gen. Maior. Today I spoke to the Deputy Rezident Colonel KUDRYAVTSEV, who is also the Counsellor for Science and Technology. We will review my missions and plans here and after that I will be free. I will be here for twenty-five days and here are my orders. You can photograph them. Incidentally among the films which I passed today there is an elaboration of my missions for this trip. They are all written out on two pages and I photographed them. This was signed by Gen. Lieut. KOZLOV, using the pseudonym DOZOV. I will need a lot of help from you to accomplish my

...../missions //

#31

missions since I must come back with something substantial.

G.: What is difficult to see is on what basis your headquarters expected you to make contacts here and accomplish your missions when you don't have the French language.

S.: They consider that 90% of the French businessmen know the English language at least to some degree. I have been at the French exposition in MOSCOW and at the reception at their Embassy, but I have few acquaintances.

14. S.: With respect to this little book written by BUZINOV which I sent you, if you could work up a similar article for me and with a preface such as he made I could simply take a girl in the translation office of Voyenizdat and check her translation into Russian and submit the work which would be to my credit. However, it would be a simple matter now for me to submit an article using any of the manuals, of which I have photographed the titles as a reference. My contacts and relations with people, such as with SEROV about whom I will report later, are getting on so well now that possibly by the end of next year they may recommend me for promotion to General. Whether they would give it to me or not is another matter, but the recommendation would be good to have on my record.

15. At this moment Harold entered and was warmly greeted by subject.

16. S.: Fine, let us start to work now, we have a lot to do. I will try to tell you everything accurately, but of course you will have questions on everything I report and it might take the next two meetings to clarify them. Let me review - I have passed eleven cassettes. I have photographed completely all the articles in all the sborniks which I have begun before, for 1960 and 1961. There are also new articles in additional issues for 1960 and 1961. I also photographed four articles from the Artillery Journals; they came from 1958, 1959 and 1960. I included 1958 because I found there an article on geodetic preparation for rocket forces. There are many other artillery articles which I will photograph in the future and I also have issue No.3 to photograph of the sbornik of the Voyennaya Mysl' for both 1960 and 1961 and there may be a fourth issue in 1961.

...../ 17.

17. S.: Now I will relate to you the report which I have prepared and which you should immediately report to your superiors. VARENTsOV's birthday party was celebrated not on the 15th but on Saturday 16th in order to permit more time. On the 15th September at 0900 hours I met VARENTsOV at the Leningrad Railroad station where he had just arrived from LENINGRAD. After having left you I had given him his razor but on the 15th at the railroad station I brought him a package containing the cognac, about which I will tell you in a moment, and which has great significance, as well as the rocket-shaped lighter and the cigarette box with inscriptions thereon. He kissed me as he greeted me at the station. He was also met there by General Lieut. VOZNESENSKIY and General Lieut. NIKOLAYEV. VARENTsOV had been in LENINGRAD because a Party conference was held there and he was elected as the delegate to the 22nd Party Congress, and very probably VARENTsOV at this 22nd Party Congress will be elected a member of the Central Committee of the CPSU. He will be elected as a candidate or a member of the CC, in other words he will receive a promotion along the Party line. Having given him the packages I went to the Committee, whose car I had at my disposal, while he went to his Directorate where he was greeted and where a ceremony took place in which he was awarded the Order of Lenin. He told me to be sure to come on the 16th at 16.00 hours together with my entire family, including my daughter and mother, to his dacha. He said that he had invited many people but many would not be there because they were out of town concerned with military matters. Who and with what military matters I will relate in a moment.

18. S.: He said that the Minister MALINOVSKY would be there and CHURAYEV Viktor Mikhailovich, who is a member of the Central Committee and the Head of the Party organisation of the RFSFR - one of KHRUSHCHEV's right hand men. Gen. Polk. FOMIN will be there, Gen. Polk. SAMSONOV, Gen. Pol. G.S. KARIOFILLI, RYABCHIKOV, a Professor of Chemistry and Lieut. Gen. SEMENOV, who was VARENTsOV's Deputy on the First Ukrainian Front. Incidentally one of VARENTsOV's two present deputies, the one who replaced COFFE is also Gen. Lieut. SEMENOV, that is a namesake of the other. In a moment I will tell

..../you the details

you the details of the party. Since I left you in England I have had the opportunity of speaking with VARENTsOV, ZASORIN, BUZINOV and many others. This is what I must relate to you at once.

19. S.: In the beginning of October this year there will begin extensive general (vse-obshchiye) manoeuvres. There were never such manoeuvres in the history of the Soviet Army. This is because all headquarters of all military districts will participate and also all headquarters of groups of forces. Even all rear services in the military districts will participate in these manoeuvres. In other words every Army formation will execute its assigned mission in these manoeuvres just as they would be called upon to do in case there was a war. In addition all headquarters of all countries of People's Democracies will also take part in these manoeuvres. These strategic manoeuvres will begin in early October and will take place throughout the entire USSR and throughout all of the countries of People's Democracies all based on combatting a hypothetical enemy in the direction of Germany.

20. S.: I will now try to explain to you in detail why these manoeuvres will take place and what their objective is. Later I will tell you who, why and when gave me this information. These manoeuvres are called strategic because they involve very great territorial depth and all military districts and all groups of forces will participate as well as all the headquarters of the countries of the People's Democracies. These manoeuvres will continue for a period of up to a month. The objective of these manoeuvres is to examine everything as a whole and to determine what units have specific capabilities. They will examine who can best fulfil offensive missions shock action, defensive operations and to examine the state of training and combat readiness of all units, as well as their joint action. Through these manoeuvres deficiencies in training can be corrected and experience in joint operations gained. But this is only one purpose, the second purpose is to have these huge forces in a state of combat readiness exactly at the time that the Peace Treaty with East Germany will be signed, so that if any difficulties occur immediately after the signing of this Treaty, which will be signed right after the Congress * they would be in a position to strike a heavy blow. In other words what KHRUSHCHEV wants to do is to backstop with actual large-scale military preparations

..../camouflaged

* which will be signed right after the Congress.

camouflaged as manoeuvres his signing of the Peace Treaty with East Germany.

21. S.: KHRUSHCHEV considers that if NATO swallows the second pill and he considers that the first pill, which was the closing of the borders of East and West Berlin, has already been swallowed, - that is the action of 13th August - incidentally, I knew about this closing four days before the fact and I wanted to pass this information on to you but had no means for doing this, since the phone call arrangement was only good for Monday and this took place on a different day. I did not want to risk putting the information into the dead drop and calling by chance. We will have to work out a system that will permit me to pass critical information to you quickly in future.

22. S.: KHRUSHCHEV, his Central Committee and his government plan to do this - on the 17th October to open the 22nd Party Congress. This conference we should call Conference "Aggressive". That is because a very aggressive attitude will be prevalent, all sorts of propaganda speeches are being prepared asking decisive action against imperialism and colonialism. And by firing up the Congress with such speeches KHRUSHCHEV hopes to untie his hands for aggressive action by placing the responsibility for the decisions which support KHRUSHCHEV and his government's position on the Congress. Even if a war takes place after the Congress, KHRUSHCHEV can refer to this situation as a decision of the Congress. For Bolsheviks the Congress represents their programme for the immediate future. All secretaries of Central Committees will be present at this congress as well as secretaries of the Parties of other People's Democracies and Communist Parties from capitalist countries as well, many of the latter will come secretly. It will be of interest to see how the Communist leaders throughout the world react to the concept of military action at this time as proposed by the leading Communist Party, namely that of the Soviet Union. I suggest for your consideration and that of our leaders how advantageous it would be to introduce some sort of split in views at this congress. It is important that there be no unanimity of views between all of the Communist leaders of the various countries.

23. S.: Already there have been orders issued that during the month of

..../October no //

October no foreigners should be admitted to the Soviet Union. All MOSCOW hotels are now being retained for the use of Central Committee members and Party delegates. They are even fumigating the rooms to be sure that foreigners previously living there have not left bacteriological contamination. Even in our Committee we have turned down all requests for foreign visitors during the month of October by saying there is no room, and that they will be busy with the Party Congress. This will continue until the 15th November since many Party delegates will stay after the Congress to attend the celebration and parade of 7th November. In addition they are now preparing to set up very strict counter intelligence procedures in MOSCOW and the Moscow oblast during this time. Therefore, I request you to have all of our agent operations in MOSCOW suspend activity during this period. It will be very difficult to work in MOSCOW during this time and the KGB from other cities have also been called in.

24. S.: Let me review. Immediately after the Party Conference KHRUSHCHEV wants to sign the Peace Treaty; at the time of the signing he wants to have all possible military units in a state of combat readiness. If necessary he will strike. If it is only a local attack by us then it will be parried, but of course if a larger conflict develops that is why combat readiness is needed. KHRUSHCHEV, our General Staff and the GRU know prefectly well that secret preparations in modern times are not possible due to intelligence techniques. But under the guise of manoeuvres, concerning which he will insist that they are only manoeuvres, their extent and duration can easily be extended. If the allies swallow the second pill and say "very well since you have signed a treaty with East Germany we will deal with East Germany", then the strain will be relieved and the manoeuvres will terminate and the result of these will still serve as a valuable training exercise for joint operations. If not the powder is still dry and military action can be employed. This is the dual purpose for which these manoeuvres are planned for the early days of October.

25. S.: Right now MOSCOW is boiling with all kinds of representatives from the headquarters of the countries of People's Democracies, both in

...../military and

military and civilian dress. I have seen them everywhere and anyone can spot them. Secondly, all prominent military commanders are in the field with troops, for example, at VARENTsOV's birthday party his deputy PYRSKIY was not present.

26. S.: There are two deputies, PYRSKIY and SEMENOV, who replaced GOFFE. PYRSKIY is now at NOVAYA ZEMLYA where they are experimenting with atomic detonations. There is a large base there on which are rockets with atomic warheads, the details of which I will give you shortly. The other deputy SELENOV is now attending the atomic bomb tests in Central Asia. Here is how I found this out. At VARENTsOV's party, Viktor Mikhailovich CHURAYEV asked VARENTsOV - where is PYRSKIY? and MALINOVSKY said that PYRSKIY is doing a fine job in running the tests and the training programme at NOVAYA ZEMLYA.

27. S.: I can now report to you about the atomic tests being conducted now since KHRUSHCHEV felt that it was impossible for him not to run these tests. These tests have two phases; in the past years the first phase consisted of testing the individual TNT equivalent weapons. They were raised on towers, from masts and dropped from aircraft. But now KHRUSHCHEV and his military commanders are testing nuclear detonations delivered by rockets. This is phase II. These tests are conducted by means of firing a rocket with a conventional charge against the selected target and then assemblying an atomic warhead and firing it against the same target. Both MALINOVSKY and VARENTsOV answered CHURAYEV that Gen. Polk. PYRSKIY is now at NOVAYA ZEMLYA running the tests and will continue to remain there because there will be additional tests.

28. S.: There is a huge rocket launching base at NOVAYA ZEMLYA which is equipped to fire the R-12 and the R-14 rockets. There are no R-11s there; this was all told to me by BUZINOV. Now with respect to these rockets the R-12 is already adopted and is being serially produced. Its range is two and a half thousand kilometres. The R-14 is now being prepared for serial production but it has not yet been produced in quantity. The range of the R-14 is four and a half thousand kilometres. Both ranges I have given are those for these rockets carrying an atomic warhead. Of course the ranges are greater with conventional warheads.

...../G.: Approximately

G.: Approximately how much greater would the range for rockets with conventional warheads be?

S.: They should be about twice the range of atomic warhead rockets.

29. S.: Before we proceed further let us look at the conclusions we can draw about KHRUSHCHEV's plan to have troops in combat readiness for either one or the other eventuality after he signs a peace treaty with East Germany. I will try to draw three conclusions concerning these preparations. First of all he is preparing nine armies as I reported in and adjacent to the immediate East German theatre and now he has ordered a tenth army to that area about which I will tell you shortly. This overall area includes East Germany itself and the areas immediately adjacent to it. In East Germany itself there are only two armies but the others are nearby in a supporting role. This first purpose is to frighten us. However, if the Communist world expresses complete approval at the Congress for his policy and he also feels that world opinion is with him he may strike us. He wants to take advantage of any indecision on the part of the Free World and may actually attack the leaders which are the United States and England. He does not have all available means for carrying through such a strike to a final conclusion. The military people know this but they act meekly before KHRUSHCHEV. And if he orders the beginning of hostilities they will comply. (At this point subject was asked to halt because the tape was to be changed).

30. G.: Before you continue we would like you to state who your sources were for all of the information you have given us, by individual item.

S.: I suggest that you take notes on the items I report and ask me to clarify them later. Now regarding PYRSKIY that came out of the conversation brought up by CHURAYEV who asked where is PYRSKIY and he was answered by MALINOVSKY and VARENTsOV. BUZINOV told me about the R-12 and the R-14. All rocket materials of VARENTsOV's concern passed through his hands, he told me that certain officers were at various bases where there are rocket launching sites. I will list these for you in a moment. These officers have all been sent to the bases as representatives of VARENTsOV and similarly there are representatives of MOSKALENKO there where the bases have a strategic designation. In addition in conversation with VARENTsOV he

...../mentioned

mentioned a number of times that the R-12 and R-14 rockets exist. With respect to the Party Congress and preparations therefore all had something to say about this, so I am not singling out any one source.

31. G.: Was KHRUSHCHEV criticised by anyone at this birthday party?

S.: No, they drank a toast to him. They are all people placed in their positions by KHRUSHCHEV.

32. (Subject now showed his list of the 89 members of various delegations who were tentatively selected to go to PARIS during the Exhibition and who were the people processed by subject into delegations which he would meet in PARIS). S: You see the ones crossed out in red have already been approved for travel here but out of this group of 89 probably no more than 20 will actually come. In four or five days I will meet one group and arrange for their hotel and itinerary together with the Assistant Rezident who is responsible for science and technology.

J.: When will the Exhibition close?

S.: 5th October.

J.: Will you be tied up with your delegation as you were with the group in England?

S.: No. Not at all, I will just meet with them and arrange things for them, but you will have to help me with my missions. I do not know anybody here and a lot of my assignments will fall on your shoulders.

33. S.: Let me give you the exact circumstances under which these conversations took place. We all got together at 16.00 hours on 16th September at BABUSHKINO. When I came there with my family RYABCHIKOV, the Professor of Chemistry was already there. (VARENTsOV had been on vacation with him previously at BADEN). Then Gen. Lieut. SEMENOV came, then Gen. Polk. FOMIN, then the Minister MALINOVSKY came with his wife. The presents we brought were the best and most sensible of the lot. MALINOVSKY brought a magnum of champagne and also a big cake shaped like the Horn of Plenty. CHURAYEV brought a large wooden eagle on a stand. VARENTsOV said that my boy (me) had really tried to do everything from his heart. I wanted to

..../tell him

tell him that there were five boys doing this. MALINOVSKY and CHURAYEV arrived in Chaikas, there were all kinds of Zims there and guards. We took a walk in the garden and then came to the table. The only one in uniform was the Minister and when I was presented to him he asked if I didn't have a relative in the Far East, to which I replied that I had a shirt-tail relative of sorts. VARENTsOV said to MALINOVSKY that I was one of SEROV's boys. MALINOVSKY's wife is a pretty woman and her name is Raisa Yakovlevna whereas he is Rodion Yakovlevich and my mother's name is Taisa Yakovlevna. When we sat down VARENTsOV told me to do the honours so I opened our cognac. It turned out to be out of this world (60 years old). The Minister wanted to drink only that cognac. I made it go around for everyone three times; however, I gave full glasses only to the Minister, VARENTsOV, CHURAYEV and myself. They began to feel tipsy after the first round because the Minister made a toast to VARENTsOV and everyone drank bottoms up. The cognac was so good and everyone was so delighted with it that they talked about it for half an hour, out of the six hours that the party lasted.

34. S: After that there were toasts by VARENTsOV and SEMENOV and finally it came to me. I remembered that no-one mentioned the fact that VARENTsOV had just been presented with the Order of Lenin. So I said that I proposed to drink a toast of congratulations to Sergei Sergeievich for his having been the recipient of the highest governmental award, the Order of Lenin. As they began to applaud I thought I would pull a fast one on the Minister, so I continued by saying that this award represents the high esteem for Sergei Sergeievich by the Party, the Government and personally by the Minister of Defence. After that he beamed and I could talk to him as a Comrade. He continued to drink cognac in sips all along and then requested that the bottle of champagne be opened and all drank champagne. The others were drinking other cognac and vodka and frankly the other cognac was junk. CHURAYEV, about whom I will give you details later drank a lot and was getting tipsy. After this the men went to the next room to smoke and I kept my ears open as you would expect an intelligence officer to do.

35. S.: Even my mother innocently contributed to the conversation by asking the Minister if there will be a war. The Minister replied that it

...../is hard to

is hard to say and that he does not even want to talk about it because he has to think about it all the time, namely, will there be one or not. However, I can say that the situation is difficult (polozheniye tyazheloye). Our enemies are not giving in to us although it is true that they have swallowed one pill. We handled this one well (sealing of East-West Berlin border) but how will it be in the future. - All I can say is that we are keeping everything in readiness. This was really a general question for all to hear the answer to.

36. S.: Later CHURAYEV who was drinking a lot and seemed to be a good fellow, called me aside and asked me to get him all kinds of things here, which you will have to help me with, and he said many things about which I will report later. I have twenty-six items here and thus far I have only covered two (Note: on his agenda). Others also asked questions, but I did not, I had to keep modest and ran around pouring drinks. We continued later to drink tea and eat fruit and KALINOVSKY was the first to leave because he had to fly on the next day at 10.00 hours to LVOV. On Monday there was to be a Party meeting there and he was to be elected as the delegate to the 22nd Congress from there and in addition he had to review matters of military training in relation to the coming manoeuvres.

37. S.: All high ranking commanders are concerned with preparations for these manoeuvres. VARENTsOV is constantly travelling as well as all other big commanders, and they are very seriously training and preparing for these manoeuvres. Beginning with the headquarters in MOSCOW, all other headquarters throughout the land are also busily engaged in this. We must pay particular attention to these manoeuvres and study all developments by all means at our disposal. These manoeuvres will involve political considerations affecting the entire world and they serve as the military backing for the policy KHRUSHCHEV is trying to push through. I have already reported to you what their objective is and have not only told you where I found out but confirmation of this on a small scale is evident everywhere in the GRU where every little officer has his own small mission to perform in support of this.

...../Representatives

#31

Representatives from both VASILEVSKY and MOSKALENKO are constantly sitting at the rocket bases since these bases have now been supplied with atomic warheads.

G.: When exactly will these manoeuvres begin in October?

S.: Between the 3rd and the 5th and will continue until the end of the month. On the 17th the Party Congress begins and after that will be the signing of a Peace Treaty. By this time the manoeuvres will have gone into some advanced phase and the world situation at that moment will be the factor to determine whether the troops will continue to stand at combat readiness or if they will terminate the manoeuvres. I will continue to report to you to what extent this will take place. Everything is not established in a perfect way, but to some degree they will be combat ready. At least they will not have to drag out soldiers by the ears from the garrisons, since they will already be in certain deployments depending on what phase of manoeuvres they have reached. This is the significance of manoeuvres and this is what we must expect from them.

38. S.: As a staff officer of our command allI can suggest is that we now begin a propaganda campaign pointing to the aggressive nature of KHRUSHCHEV and the coming Party Congress to show that we are not deluded. Many effective counter measures can be taken and from what I read about firmness expressed by the West I know that this is causing KHRUSHCHEV anxiety. Your leaders should take full cognizance of what I have reported regarding these manoeuvres, they should check from other sources what I have said and take appropriate counter measures, the nature of which is of course their business.

39. S.: Now both from documents and from conversations I have discovered where there are rocket launching sites about which I will tell you. They have atomic warheads available there. I mentioned already NOVAYA ZEMLYA where FYRKOV is stationed. The next one is NORILSK, there is a base in that area; then in FRANZ JOSEF Land, but I do not know the exact location. In the area of the town of VORKUTA, these are the northern bases. In the South this is what I have found out in fulfilling your mission assigned to me to discover what I could about rocket launching sites. The area of KRASNOVODSK and also in the area of KIROVABAD. These face Iran and Pakistan.

/Also in the

Also in the South, literally two days ago we were getting permission for a Japanese geophysicist - his name is SATA (probably SATO) - to show him the island of ARTEMA which is near BAKU. He was concerned with the technique of producing oil under water. Our committee submitted a request to the General Staff and we received a paper with an official Top Secret answer to the effect that no foreigner may be admitted to the island of ARTEMA. There is a rocket base there. Either it is a PVO place or a rocket launching installation.

40. S.: There are also atomic tests being conducted in Central Asia. That is where SEMENOV, the second deputy to VARENTsOV is sitting. I do not know who the officers are from MOSKALENKO, who are at the Strategic rocket bases. BUZINOV and KARIOFILLI told me that many of their officers are constantly going to the bases and they serve as the eyes and ears of the artillery command because there are atomic warheads at these bases. There are also conventional warheads there and the positions are kept under constant combat readiness, and there are representatives there from both MOSKALENKO and VARENTsOV.

41. S.: Now here is another important item for you. You probably are aware of and know that on the 8th of September, possibly by your time zone the 9th, an atomic detonation took place. This was the first detonation of a 16,000 kiloton (sic; but see Meeting No.32) yield. In the past they had detonated ten, fifteen and larger kiloton yield, but this was the first one of this magnitude. This detonation of 16,000 kilotons was performed by means of the R-12 rocket. This rocket was launched from KAPUSTIN YaR, and its impact area was in Central Asia. The detonation took place at the highest point in the rocket's trajectory. It was a high air burst and VARENTsOV was present at this test. VARENTsOV personally told me about this, he had been at KAPUSTIN YaR. When I was eating in a restaurant with BUZINOV he also confirmed this. Prior to launching a rocket with an atomic warhead, at first a rocket of the same type with a conventional warhead is launched to determine the range and deviation errors. For the rocket that carried a 16,000 kiloton warhead the conventional warhead rocket had a v/b of 160 metres.

...../Let me emphasise

Let me emphasise that these tests using rockets with atomic warheads were mandatory for KHRUSHCHEV to make because the headquarters demanded this to study how these rockets would perform with atomic warheads. This was never done before and therefore KHRUSHCHEV used all political manoeuvrings and false arguments to get away from the non-testing agreement, because he has a great need to make these tests himself. This is the only way to understand the matter because all he did was to twist political facts around.

42. G.: Will you explain how the conventional warhead rocket worked?

S.: The conventional warhead rocket had a v/b error of only 160 metres. But it was of course detonated on the ground on its impact area target. And on the basis of this trajectory the atomic warhead rocket was fired. You see when we discussed rocket accuracy last Spring such precision had not yet been approached but now that they have developed accuracy they can use atomic warheads, realising that the bursts can be made at a desired point.

43. G.: When you gave the range of the R-12 at 2,500 kilometres and you said that the burst took place at the height of its trajectory, this would make it a very high airburst.

S.: Yes. It was a high airburst in the interests of surface protection and even so the burst took place over wastelands. We will return with conclusions to these matters and please preserve my notes while I go on to the next point.

44. G.: Before you do that, one small clarification. Exactly from whom did you find out about each specific launching site?

S.: I repeat, about NOVAYA ZEMLYA, MALINOVSKY and VARENTsOV answered CHURAYEV's question. I found out about NORILSK, Franz Joseph Land and VORKUTA from KARIOFILLI, VARENTsOV and BUZINOV. About KRASNOVODSK and KIROVABAD I found out from both BUZINOV and POZOVNYY. Regarding ARTEMA there was this document. In addition when POZOVNYY was working with the PVO in BAKU he also visited ARTEMA and there were bases there then.

...../45.

45. S.: Right now BUZINOV is in the D.D.R. with FEDEROV. FEDEROV has had a lot of trouble there. His son who is not mentally normal was beaten by FEDEROV and this thirteen-year old boy ran away in the direction of LEIPZIG. He was brought back and headquarters called in FEDEROV and told him that his son was persona non grata in the D.D.R. Right after this incident one of his officers lost a secret document and again FEDEROV was on the carpet. However, he is still at his post although his wife, daughter and son were sent home at once. She was even at VARENTsOV's birthday party, but in a separate room for the younger people, where my daughter sat and VARENTsOV's daughter also sat.

46. G.: Have they begun a general evacuation of Soviet dependents from the D.D.R. yet?

S.: No, not yet, but there have been indications that this would be done in September. I heard rumours about this but did not pay much attention.

47. G.: By the way was the height of the atomic burst given to you?

S.: That is very simple to determine, because according to physics the epicentre would be one tenth of the trajectory range. This is a law of ballistics.

48. S.: My next point is very important, I obtained this information from ZASORIN. He was on duty during the night of 7/8th September in GRU in SEROV's office. I met him when I brought some medicine he requested, and he told me that during the night of 7/8th September a cable from PARIS came to GRU stating that the President of France, De GAULLE sent a message to WASHINGTON, LONDON and BONN giving the decision of the French Government to allocate 230 military planes to participate in the defence of Western interests in BERLIN.

49. S.: The Rezident here in France, General Maior Ivan Nikolayevich CHEREDEYEV.....

G.: What official position does he hold?

S.: He has a cover job, but I don't know which one. I will see him tomorrow. CHEREDEYEV had a comment in the cable stating that the information

...../ was obtained

//

#31

was obtained from French Communists. The information I have just given you was not announced anywhere, neither in TASS or anywhere else. It arrived in a Top Secret classification. There is clearly a leak somewhere in the French Government through which this information was obtained. The cable arrived at night and because of its nature was immediately delivered to MALINOVSKY, the same night. He read it at home and ordered that the contents be given at once to all members of the Presidium and to all the commanders of combat arms, in addition to a number of commanders of military districts which are adjacent to the theatre concerned. The next day SEROV was advised of this. Note that the chief Duty Officer must be at least a chief of a napravleniye, in order to make spot decisions on the significance of a cable. ZASORIN is very friendly to me and gives me much information verbally. I strive to maintain this good relationship. My conclusion to this matter is that investigations should be made to determine who could have access to high level correspondence from General De GAULLE. This man should be found.

50. S.: I have already written to you earlier giving the name in full of the Frenchman who suggested to the Soviets that they should not permit Americans or Englishmen to visit certain sections of an aluminium factory in which there was an advanced technological process. This was the factory in STALINGRAD. This information came from official papers of the KGB in which it was stated that this Frenchman made that suggestion. I couldn't copy this document, but I had it in my hands for two minutes and copied the name of this Frenchman letter for letter. Maybe he is a KGB agent, maybe he is co-opted by them or is some other type of svoloch. This statement of CHEREDEYEV's that the information came from French Communists again confirms my statement that Communists in all Western countries are being actively used for espionage.

51. G.: Did the cable classify what type of planes or from where they would be re-deployed?

S.: No, all it specified was that they were 230 military combat planes. Incidentally I caught ZASORIN in a very favourable situation. I asked him if he was not given a decoration for the information he obtained in

...../ his Middle East

9

his Middle East Directorate about Iran and Turkey. He said "not a damn thing", "none of us got any credit, not even GRU, because this information came straight from KASSEM". He felt well disposed when I said this since after all this kind of information comes through his napravleniye; so he mellowed and told me about the cable.

52. S.: On the 17th August, there was a decree by the Party and the Government creating a command of Civil Defence. The chief of the Civil Defence of the Soviet Union has been designated to be Marshal CHUIKOV. He has been relieved from his duties as Chief of the Ground Forces. This decree was spelled out in seventeen pages and I held it in my hands about [illegible] twenty minutes. I read it and will summarise its contents. I did not have a chance to photograph it but when I do I will photograph it in full. The created command of civil defence (komandovaniye grashdanskoy oborony) has been made subordinate to the Minister of Defence. This command of civil defence is for a special period (osobyy period). This is exactly the term used and it is in quotes. This period will be announced by the Party, the Government and the higher military command. Action should be taken for defence of industrial installations and its rehabilitation as a result of enemy actions. Protection of the population of course is also included. When this special period action is announced, all necessary action to be taken by every Ministry is detailed. Every individual Ministry must plan to take measures for the protection of its own installations evacuation and protection of its personnel and its own rehabilitation. When we speak of the civil defence command CHUIKOV is not the commander but the chief (nachalnik).

53. S.: At this moment the position of Chief of Ground Forces is vacant. As Sergei Sergeievich told me this position may be filled by KRYLOV, the present commander of the Moscow Military District, but recently it appears that KRYLOV has refused this position. At this moment ZHADOV is the acting Chief of Ground Forces and recently I have heard a rumour that CHUIKOV will return to assume the position of Chief of Ground Forces, even though the

position of Chief of Civil Defence is important they cannot find a suitable replacement for CHUIKOV as Commander of Ground Forces, and that position is still vacant.

54. S.: At present reserve officers are being called back to active duty to serve in Civil Defence headquarters. This is a very interesting new organisation.

G.: How is this organisation set up in terms of local subordination?

S.: Like this, there is a central command and then the subordinate headquarters are organised in military districts. Their functions are closely co-ordinated with the Oblast Party committees, the Oblast Executive committees and all the way down to rayons. At any rate one of these days you will get a photocopy of the whole seventeen page document. One exists in the Committee and there is one in GRU.

55. M.: To whom did you say it was subordinate?

S.: To the Ministry of Defence, but also to the Council of Ministers since it is partly a military and partly a civilian organisation. Reserve officers are being taken to fill out the headquarters cadres.

G.: You say it is a military district breakdown, but not by oblast?

S.: It is by military districts because as you will see later when I report on this, there are many problems which are the concern of the commander of the military district, particularly in terms of military support and supply.

56. S.: Next on the 12th or the 14th September PANTELEYMONOV was recalled to MOSCOW to GRU to report on Iran. He is the GRU rezident in Iran. He was told that his T.D.Y. would be for a period of one week and that he would have no leave. This is in connection with what I have already reported to you concerning Iran. They want his report there now as the rezident of GRU. I did not see him but I know that he came on the specific instructions of SEROV and that he will work with ZASORIN who told me about this.

57. M.: Who told you about the original information concerning Iran?

S.: ZASORIN told me and also BUZINOV who had been down South. He

..../told me that

told me that extensive military preparations are being made in the military districts adjacent to Iran. Another point I would like to mention now is that KHRUSHCHEV is going to tie in Iran to the German problem. He plans to send troops into Iran when complications develop in Germany. This is planned to be done in October. KHRUSHCHEV plans to localise this matter in Iran on the basis of extensive American military bases there. ZASORIN also told me that other rezidents in the Middle East are being called in for consultation in MOSCOW but which specific ones I do not know.

58. S.: By the way another thing I have heard about KHRUSHCHEV's present policy is that he wants to have a short period of quiet particularly prior to the convening of the Party Congress. VARENTsOV told me that KHRUSHCHEV seems to be sitting on the brakes right now and is not agitating now which VARENTsOV considers to be very correct. This is being done so that during the Congress everything can be carried out in a militant manner with all kinds of military demands and reinforced by the forthcoming manoeuvres, to give the best possible climate to the signing of the Peace Treaty. And in case of trouble to be in a position to deliver a blow. This could be a local conflict or a large one, KHRUSHCHEV is ready to strike us first. However, if the West is ready to swallow the second pill, namely recognise the D.D.R. then the tension will be eased. KHRUSHCHEV has now high hopes of a split in NATO.

59. S.: The Soviet Command estimate that the Americans have three rocket bases in the territory of Iran.

G.: Who told you this?

S.: Two persons told me this, the first one to tell me this was BUZINOV since this information is plotted on military maps to which he has access. Later when I was feeling out ZASORIN on this topic he confirmed it and said "Yes, that's about right". BUZINOV knows this more accurately since he is concerned with operational matters and they have their map showing enemy military dispositions and installations. In addition VARENTsOV has his own intelligence unit, which is concerned with studying the relative strengths of opposing forces in each theatre of military action. BUZINOV added that

..../the rockets

the rockets deployed on the three American bases in Iran can only reach as far as the South Urals. This is evidently from the calculations of the Soviet Technical rocket analysts.

60. S.: In reference to the photograph of my graduation class from the rocket academy which photograph I request that you show me later so that I may identify the individual students and instructors, there is a class-mate of mine, Lieut. Col. BONDARENKO who was recently in MOSCOW and when I went to the Artillery Headquarters to photograph, and of course I walked around there and ate etc., to act normally, although my photography was covered by a visit to the secret library for reference material for the article I am presumably writing. I met BONDARENKO there.

G.: Which Headquarters was this - the DZERZHINSKIY Academy?

S.: No, it was VARENTsOV's Headquarters, but it is located on the Academy premises.

61. S.: BONDARENKO told me that he had just been appointed as the Deputy Commander of a rocket brigade in KREMENCHUG for engineering matters. This brigade contains mixed battalions of our old friends the R-11 and one or two, I do not know exactly the number, of R-12 battalions. So you see here is an example that the R-12 is an adopted weapon issued to troops and specifically such a battalion exists in KREMENCHUG.

62. S.: I now want to report to you various other items which could be of interest or significance. In the cities of LENINGRAD and MOSCOW there are shortages of vodka. They are not producing vodka now and are using up old stocks. Alcohol is being stored in reserve for rockets. They are drinking cognac and wines and if vodka from old stocks is to be thrown out it results in all kinds of fights. Alcohol is being stored as a strategic reserve.

63. S.: VARENTsOV replied to a question which was very cleverly brought up by CHURAYEV regarding little news about MIKOYAN. CHURAYEV asked if MIKOYAN were ill since so little is heard about him. VARENTsOV replied to

..../CHURAYEV's query

CHURAYEV's query that despite the apparently good results achieved by MIKOYAN during his trip to Japan that MIKOYAN was arguing with KHRUSHCHEV and not agreeing with his policy. In addition at much lower levels rumours are heard that MIKOYAN does not agree with KHRUSHCHEV's militant position regarding BERLIN and his general foreign policy.

64. S.: CHURAYEV gets drunk quickly, which was not appreciated by either the Minister or VARENTsOV because they were astounded that such a prominent man would permit himself to make the statements he did at the dinner table. CHURAYEV personally told the following: "Only yesterday" (this would be 15th September) "the Central Committee" (and remember he is the Chief of the RFSFR) "received a report that in the town of BESLANI a large centre not far from ORDZONIKHIDZE, hooligans attacked Militia men and killed several of them. A similar case occurred recently in the town of ALEKSANDROV in the MOSCOW Oblast and their situation was even more severe since not only were Militia men attacked but also representatives of the local MVD. This is similar to what happened in MUROVO" (and you have read in the papers that there were mass executions by shooting there) "and a similar situation occurred in IVANOVO where the second uprising occurred, taking the form of an extensive hunger strike. In IVANOVO up to 400 men attacked the Militia when they attempted to disperse the crowd who came to make a mass appeal for better food conditions but collected peaceably without sticks and stones to make their plea. They complained that workers in MOSCOW and LENINGRAD had sufficient food ration whereas they and their families were starving. When the Militia attempted to disperse them from the areas of the OBKOM and the Ispolkom then they attacked the Militia. The Militia fired warning shots at the ground and air, not at the crowd, but neither they nor the Chairman of the Obkom could quiet the crowd so troops were called in who succeeded in dispersing the crowd and mass arrests were made."

65. S.: In general there is much unrest within the country. All kinds of banditry is breaking out including assaults, knifings, all kinds of theft and murder. These numerous attacks on the Militia are not only done by hooligans but by elements of the civilian population, as in IVANOVO, who wish to express

...../their anger at

#31

their anger at the unsatisfactory situation. Even the Ministry of Defence has published orders for punishment of cases of mass rape in the Minsk area. One of the guilty was even the Party Secretary. Even in the MOSCOW area in towns such as RAZZNSKOYE there have been numerous hold-ups at knife point. This has even taken place in electric train lines when few people travel.

66. S.: The Army morale is bad since there is little faith in KHRUSHCHEV's militant policies. Reservists called up and those retained who have been scheduled for discharge feel that they are only kept temporarily to suit KHRUSHCHEV's policy and should the situation result in less tension they would be thrown out. But in the meantime they must risk their lives for this policy. This situation is known to KHRUSHCHEV and to his commanders. This is why KHRUSHCHEV is maintaining such a stern policy when he says that any local conflict may develop into an atomic conflict. He does not want to deploy his entire conventional army because he fears mass desertions. Many officers and men will go over to the West, after all look at how many Soviet soldiers and officers deserted from the D.D.R. to West Germany.

67. S.: There are many instances like those I mentioned about dissatisfaction and one example is one that SEROV personally told me about. I have been at SEROV's house twice and will report in full on this shortly. On the 9th September there was a Party conference in the FRUNZE District of the city of MOSCOW. A Chief of a Department of the FRUNZE Academy, Colonel LAZAREV made a speech at this Conference as a delegate to this District Party Conference. He made a speech against the cult of KHRUSHCHEV. He said that KHRUSHCHEV had correctly criticised the cult of STALIN and now he is himself developing more and more the cult of KHRUSHCHEV. The Colonel was interrupted and immediately the Chairman of the Raykom proposed a censure of the Colonel's speech. The speech was called apolitical and incorrect and it was proposed that his mandate as a delegate be taken away. This was done by vote at once and he was thrown out of the Party Conference for daring to criticise KHRUSHCHEV. It must be assumed that he will also be thrown out of the Party and also from his position in the FRUNZE Academy.

...../68.

1/

68. A brief pause followed and subject said:- We have much work to do. I am only giving you the highlights of my report now, then we will get into detail and after you have studied and reached definite conclusions you can re-question me for clarification.

69. G.: While we are waiting for your next items, although we have no time to go into the questions we have prepared for you now, just tell me one thing - who in general was the source of the information you gave us on BERLIN in the material that you passed through WYNNE in MOSCOW?

S.: It came from Gen. Lieut. KORENEVSKIY. He had visited his close friend a member of the Central Committee whose name I do not know. ZASORIN is very friendly with KORENEVSKIY, who, as you know, is the Chief of the Information Directorate, and he told me that KORENEVSKIY told him about this order that KHRUSHCHEV received from the Presidium and the Central Committee and what KHRUSHCHEV wants to propose when our chiefs convene exclusively to consider the BERLIN question.

70. S.: Let me go on to my next point. You requested and gave me the mission that I find out by all possible means what is being done in the USSR about the development of an anti-missile missile. I can tell you exactly and this information was told me by Sergei Sergeievich, BUZINOV and POZOVNYY. POZOVNYY has very wide and important contacts and he is a prominent political worker himself. In MOSCOW KHRUSHCHEV has established a large and special NII and there is a special experimental rocket battalion which is developing by means of all kinds of electronic guidance assemblies rocket control which is capable of intercepting a hostile missile in flight and destroying it. Right now there is just a special NII and the experimental battalion. The Army has nothing. Everything else KHRUSHCHEV may say is foolishness, bluff and propaganda. However, experimental work is being done.

71. S.: Another mission you gave me I have fortunately accomplished is the following, there is a prominent rocket designer in MOSCOW whose name is CHELOMEY. This man is listed in the Kremlevka Telephone Directory.

..../CHELOMEY is

#31

CHELOMEY is 43 or 44 years old, his first names are Vladimir Nikolayevich; he is a prominent specialist on KHRUSHCHEV's rockets, very intelligent and talented and has two laboratories under his direction in MOSCOW. In one of CHELOMEY's laboratories KHRUSHCHEV's son is employed. KHRUSHCHEV has a son who is a civil engineer. CHELOMEY is the one who worked out the employment of the rocket "Krylatka" which was used on submarines for employment with ground forces. He is also perfecting the "Krylatka" which is being used on submarines. BUZINOV confirmed for me that the velocity of this rocket is 500 metres per second.

72. S.: The next point is: There are 400,000 men in all services who are due for normal discharge from the Army and the decision has been made to postpone this discharge until sometime in the Spring and to retain these men on active duty. This data I read in the General Staff. You see this is just another element in KHRUSHCHEV's plan to have a militant decision made at the Party Congress and to sign the German Peace Treaty and be supported by these troops on ostensible manoeuvres which are combat ready and here he is retaining men who are scheduled for discharge as a further element of support of his plan.

73. S.: Next item. A Third Soviet Army is being moved into the territory of the D.D.R. There are only two Soviet armies there now not counting D.D.R. troops. The Army being brought in is the Eighth Mechanised Army. This Army was mentioned to me by MALINOVSKY who left VARENTsOV's party early because he was flying to LVOV the next day. He said "We shall see how our number Eight will stage its transfer of bases to Germany". It is being moved there from the Sub-Carpathian Military District. This Army is composed of three tank divisions and two motor-rifle divisions.

74. S.: In addition, although I do not know where the exact locations will be, six regiments of the PVO type V-75 rocket regiments are being moved into the D.D.R. Keep in mind that these are independent regiments of the PVO.

75. S.: It is interesting how this can be confirmed, here is an example. The day before yesterday I was in VNUKOVO with a girl friend that I see from

...../time to time

time to time, Irina. I went there to take her to a restaurant because everybody knows me in town and VNUKOVO is an internal airport. There the deputy head of the restaurant is an old friend of mine an ex-officer who had previously worked at the Aragvi, I told you about him, BONASIENKO, Volodya. He told me that when he was on duty on Sunday the Minister and his wife arrived, there was delay in getting the plane ready and that the Minister finally flew off to LVOV. Can you imagine this? Here I get a confirmation from a civilian, that which I heard on the 16th at VARENTsOV's party.

76. G.: What will these PVO regiments of V-75s protect in the D.D.R.?

S.: I don't know exactly but I presume they would protect our troop units and undoubtedly there are other units there already which will be supplemented by these six.

77. S.: Remember there are a total of ten various armies in that theatre even though now the Third Army is in the territory of the D.D.R. itself, this will serve to increase the Soviet troop density in the D.D.R., but the other armies are in the second echelon and their function is to serve as reinforcements and a source of replacements when needed for the first echelon. Of course in case of a general offensive these armies could also be committed and in fact if necessary not ten but twenty armies could be used.

78. S.: VARENTsOV told me another thing of interest and he even cursed when he said it: "We are doing things in a one-sided way. We are placing emphasis on rockets and it is proper that we should do this but we are beginning to forget about conventional artillery. This conventional artillery is of course organic in all rifle divisions. We now have a shortage of conventional artillery." He said that there were deficiencies in certain types of artillery thanks to the inclusion of rockets. He did not tell me what types of weapons they were deficient in. The armies that are deployed in the German direction are not up to strength in equipment or in armament. The deficiencies are being reduced every day.

79. S.: I believe I have already written to you that in PARIS on the 18th October there will be a Conference of the Inter-Governmental Oceanographic Commission. The Central Committee has confirmed sending Vice-Admiral CHEKUROV

...../and the

#31

and the intelligence officer from GRU, Captain 1st rank RYSHKOV.

G.: Yes, we have received this information.

80. S.: Well I have already talked about this speech of KHRUSHCHEV's saying that there could not be a local war on its own. It is just this which is the dreadful thing about the whole situation and it is felt both in the country and within the Army - hence his insidious policy which we should note and understand - this desire to strike first and to destroy atomically everything that he can, as far as his atomic strength will allow him - to scare us and those in his country who disagree with him - if I (KHRUSHCHEV) destroy with the atom - you understand that all who are discontented - and many in the country are - will immediately be silent.

81. S.: These are the questions which I wanted to report on from this list - the most important. But a number of them must be expanded upon to a certain extent and I will allow myself to continue with this during the course of our work. I ask you to keep this list.

82. S.: While we drink our wine I will tell you some new political anecdotes which the Russian people have made up - this is done with a purpose, not by chance.... Two Soviets meet. One asks - "How do you live? Well, do you go to the cinema?" "Yes, I live well, I go to the cinema"..... "Do you go to the theatre?" "Yes, I go to the theatre, I live well."..... "Do you read the newspapers?" "Yes, I read the newspapers - if not how would I know that I live well?"

83. S.: Another one. One Soviet asks another "Will there be a war?" "No" "Why"? "Because KHRUSHCHEV's battle for peace will not leave one stone on another."

84. S.: A Jew is asked by a KGB man "Why have you concealed the fact that you have relatives abroad?" "I have never concealed the fact that I have relatives abroad - I wrote the truth, I have no relatives abroad." "You evcloch - you are concealing the fact that your brother lives in Israel." "Then it is my brother who really lives at home - I am the one who is living abroad."

...../ 85

85. S.: KHRUSHCHEV gave a questionnaire to everyone "What will you do when we reach (dokhodit') America?" Someone wrote "When we reach America you can go on, but I will stop right there....." This is the life of the people - humour through tears - rough humour.

86. S.: (Checking his list) Now I must show you on the photograph the teachers and students. You remember that you asked me who studied in the VDA with me - one was Colonel BALAKIREV, Nikolaj. He finished at the Academy with me, was in Italy for a long time, is a senior officer under the head of the Second Directorate Lt. General KONOVALOV. Another one, Major KISHILOV, Nikolai too, also works for KONOVALOV. I mentioned (LT) Colonel FUKOVSKIJ who has gone to Iran. Colonel BOKAREV, deputy to SHOLIKOV for internal cadres of the GRU. There is also a Colonel BYCHKO, Aleksandr Nikolaevich who was in Canada, then worked as a senior officer in the Operational Directorate with SOKOLOV, the Third Directorate. Now he has also been transferred to General SOKOLOV, the second one, who is in the Otdel of foreign relations. Then I mentioned the name of Colonel CHERKUNOV - an airman, working in the CC working on our GRU cadres - he has written a new personal report on me (kharakteristika). Colonel KOLIBANOV works in the CC in this same administrative department which is concerned with GRU cadres. I mentioned them already - this is just a confirmation that they are still in the same place.

87. S.: Now I will tell you in short and then in detail, about the SEROVs. They received me very nicely at their home. They live on Granovskogo Street, opposite the Kremlin hospital next to the Voentorg.

G.: How was contact made - did you ring them up?

S.: No, they searched me out - his wife rang for me at home - had Oleg Vladimirovich come back, and so on. They expected me back from you, from LONDON, about three days earlier. Granovskogo Street, No.3, second entrance, flat 71. I came alone as a guest, taking their things with me in a small grip - there is such a watch on the place, downstairs, but they rang up to say I was to be allowed in.

...../ 88.

11

88. S.: Marshal of the Soviet Union ZHUKOV lives in the building, below the SEROVs, who has not so far gone to work for KHRUSHCHEV. SOKOLOVSKIJ is working as a chief adviser in the Glavkom, ZHUKOV has not yet agreed to do so.

89. S.: Marshal of the Soviet Union GOLIKOV lives on the first floor, opposite ZHUKOV, Head of the Main Political Directorate - all in this house where I was. Opposite SEROV on the same staircase (2nd floor) lives the Chief Prosecutor of the U.S.S.R., PUDENKO. Above SEROV lives SUSLOV, member of the Presidium of the CC and above SUSLOV is the flat of FURTSEVA - all in No.3 Granovskogo Street to which your obedient servant goes as a guest! All these people are in the second entrance - there was no conversation about the people who live in the first.

90. S.: Well, I arrived, gave him his shirt and all the little things. They were all very pleased. They laid the table. I was alone as a guest. He arrived, asked me how my duty trip had gone and then went to the reception for the Korean National Day. I stayed with the family. When I said that I was going to France they gave me a list of requests - I have got them all written out. Then I went home - the caviar I have brought you is from the SEROVs - they gave me caviar and kolbasa - I have not brought the kolbasa because they have it in France. We got on very well. SEROV was the first who signed the first paper authorising me to come here on a duty trip for the GRU. After Mrs. SEROV and his daughter Svetlana had telephoned several times to my home without reaching me, one day SEROV rang CHEZHOV, SOKOLOV's deputy in the 3rd Directorate - SOKOLOV was on leave "Where can I find (subject's name)?" "I will go and find him immediately". He called me out of the Committee, asked what it was about and he told me to call SEROV urgently at his home number Granovskogo Street - he has a telephone at home and one at his dacha. This CHEZHOV as the deputy to SOKOLOV who is sitting in SOKOLOV's office gave me the key and said that I could telephone from there. - what trust! The safe was closed it is true, but not sealed. I closed the door, sat down and telephoned. He said "You seem to have disappeared - we want to see you." I said "Comrade General of the Army when should I come?" He said "Come tomorrow at 6 o'clock." I went to his house, he went off to

...../the Korean

//

the Korean reception and I stayed on with the family. Their attitude was excellent.

91. S.: Soon after this, I was summoned by IYEVLEV, the Head of the Direction under SOKOLOV - a Captain 1st rank - we have come across him. IYEVLEV is concerned directly with America as VORONIN does with ? England. He asked me: "What would you think if we sent you to America as a Counsellor?" I said that it was an attractive idea - "I am still capable, healthy and willing. The country is very interesting and important for intelligence work. I would willingly agree. This is my open answer to your open question. I agree." Then, two or three days after I had seen SEROV I was summoned by CHEZHOV. He said "We are thinking of sending you there. We will check in every detail. You would go as a Counsellor - a straightforward Counsellor to the Ambassador - but your work would be for the GRU. That is where the conversation stopped - what will come of it God only knows. They may of course take me. SEROV may, of course, give the order "Take him out of this Committee and put him to work in GRU" and then we will see where they will send me - either to England or to America - for there were conversations about England too. Thus during my work with you here we must think in detail about my communications with you - only along the line of agent communications - excluding the Committee and my visits to Embassies etc. - only through agent channels - DLBs, meetings with Janet and so forth. We must be prepared for this - this is a real problem. The second question which affects us - when I leave here I should have instructions from you on how to pass on to you immediately this or that important material for our High Command - as for instance I knew for four days beforehand that the BERLIN frontier would be closed on August 13th, and that KONEV was flying out. I ask you to think about this. This is all so that my ideas and requests are in your heads already.

92. S.: My missions in France are on two sheets which I have photographed and which you have not yet seen. I ask you to select a route which I can travel through France after the closing of the Exhibition. Somehow we shall have to work for France, for General de GAULLE - I shall have to work through you if they will not help. I ask you from your deep knowledge and experience,

...../to think //

to think out something interesting so that I can achieve something on this duty trip - so that once again I go home with results. You read my report and know that I received thanks for my work reporting on that base - for all my photographs. They show the new anti-aircraft system in England - people from the Embassy have not been along this route recently and have not seen this base.

M.: The photographs were good, were they?

S.: Yes.

93. S.: Incidentally, about Karl Marx's grave. I submitted a letter, which went to the Central Committee who told the Embassy to allocate money for the payment of the caretaker of the cemetry to clear the grave up and instructed people working in the Embassy to go and check on this and to go there more often. They can see that I am alert from the military and political point of view, as an intelligence officer.

94. S.: I should also report that I did not have time to spend much time at the French Exhibition (in MOSCOW). I know of someone - I will give you the name and show you some documents. I went with WINNE, and once by myself and I was at a reception at the French Embassy, given by the Ambassador. I have no acquaintances - I could not acquire them - I did not look for them and there was not enough time. But no one knows whether I have any such acquaintances in MOSCOW. Give me some acquaintances of Frenchmen who speak Russian and some French and who were in MOSCOW. Or pick out someone from firms which might go..... We must think about this..... any of the French who were in MOSCOW.

H.: This is not so easy.

S.: He should be one of our people. If you read you will see that the GRU has given me the task of putting two or three Frenchmen in touch with our Rezidentura. Two or three are not necessary - this is Utopia - give me one. Give me a man who can fool them and do whatever is necessary for us. People who can work with Russian representatives - we can achieve something interesting through this link. I have been given the job of choosing DLB

..../sites and

8

sites and meeting points in all the towns where I am. We shall know them then - two or three in a town. Is that bad? And then, if you give me something big I will get a decoration.

95. H.: I think that we ought to explain to him at this moment that France is not quite the same as England and that we do not want to bring the French in in any way - we want to keep this entirely secret from them and therefore we can not get the co-operation of the French in the same way as we could do in England and, although we will do the best to help him in every way we can, it is going to be very much more difficult for us whilst we are here. You had better explain this to him.

G.: You must remember that you are in France, not in England and, as you remember, you yourself told us about a Frenchman who has been in the USSR and who visited the aluminium factory. No one knows where there are leaks.

S.: But surely there are steadfast people in French intelligence who can be told and who are working wholeheartedly for the French and for us?

G.: We do not want to share our knowledge about you.

S.: I understand that you are clever and experienced case-officers (rukovoditel') but surely France is our country?

H.: Yes. But if we were to tell the French what we are doing here this would complicate matters. They would want to be here too. We would not be able to get security and therefore although we are quite prepared to do anything within our own powers we are not prepared to do anything which would involve bringing in the French. (G. explains).

S.: Evidently they have few acquaintances here because the senior officers in KONOVALOV's operational section (uchastok) say "For goodness sake get us two or three people somehow" - you can read this in my brief. You know, in England they only gave me a mission for making one contact - at the same time we can infiltrate our people here. We can do something profitable here. Well, I ask you to think about it - what you do should earn me thanks - this is your business as case officers.

H.: You must understand that we will do everything in our power, but our powers are not so great here in France.....

...../96.

96. S.: Do you think that we could arrange that I find something - this is primitive, is it? Or that I steal something again like the Nomonic 115 - you remember - I got a good evaluation for that from KORSNEVSKIY and for the electronic manual. Well then we must think out something good so that I get a decoration and am promoted to General. Then you will get a map with all the bases on it.

H.: It is not so simple for us.

S.: I understand ..... but if I go back with empty hands after 25 days they will say that he has only been groping about and has done nothing.

H. You won't go back with empty hands.

S.: Well, let us think something out - they did not give me money for nothing. We should talk about WYNNE - I have a question I would like to discuss with you. We must think something out.

97. H.: Yes. I would like to talk about WYNNE with him at this stage. I don't know what he has talked about, but we have got to bear in mind that if WYNNE is going to be important for the future of this operation it is frightfully important that he does something for the firms which he represents. He has already spent a long time hanging around. He has not carried out his tasks - he is due to go to Yugoslavia and although he is here now, he cannot stay. Otherwise he is going to lose his job and his potentialities for the future (G. explains).

S.: He mentioned the same to me, he should certainly go to Yugoslavia - he is not necessary here. It was very good that we met. He said at the Committee that he was going to visit our Exhibition.....

98. S.: Well, to go on, so I wrote, I shall not be going to England. There are none of those sort of delegations. At the beginning of 1962 WYNNE should visit the Soviet Union with a delegation. +I may be able to accompany TIKHONOV - on the metallurgical delegation to England. But WYNNE should come - this is important.

G.: He can bring us some mail.

S.: Yes. Well what about [illegible]? He tells me that his firms are not satisfied with him - he is losing touch with them. Of course, as I feel

...../you know, he

you know, he would be ready to work exclusively for us and with me - and to receive money for this - a monthly salary - this is clear. In general WYNNE has many suggestions - he wants to bring his wife here but what use would that be. We visited a restaurant just now - an hour ago - he had changed and had forgotten all his money. I expected this and I had £2.10s and I gave him £1 to pay - I had already changed all my dollars into francs. Well we know WYNNE's psychology. He is a good fellow and we are fond of him - he is a little self-seeker, of course, but he is an honourable man and has done a lot for us. He must be supported in the future - how, is your concern not mine. He should stay here for a couple of days - to show me PARIS - there was no point in going out with him tonight - I am tired and this is more important. Then he can go and come back later during my stay.

99. Subject hands over envelope and letter given to him in MOSCOW with arrangements for PARIS meeting. He was given telephone number of safe flat and told that one of case officers will always be available on this number. He is told how to use a telephone - given 'jetons' told always to speak in English and never to telephone from his hotel or from the Soviet Embassy.

S.: I will check the number with you later (see below).

100. S.: On 24th -30th September in Oxford there will be a symposium on the structure and making of paper, on the theoretical and technical aspects of paper production. The symposium will be attended and addressed by leading paper experts from many countries.

The Head of the 1st Directorate, SEMICHASTNY, is very interested in this symposium and the head of the Otdel of SHELEPIN. SEMICHASTNY is very interested in paper from the point of view of "passportisatsia". There will be no delegation from us. I have asked WYNNE to get me overt material on this.

H.: Yes, I should think we could get that. We will try that.

J.: Here are telephone tokens - (further discussion of use of telephones).

101. S.: During the French Exhibition LOPATENKO, the head of the Department

...../in the Committee

#31

in the Committee, got to know a Frenchwoman Marie Paule LACHAUX.... she works in the Federation of Mechanics. She wrote this with her own hand ..... WYNNE and I met her in MOSCOW - she speaks English and French, of course. We must take a look at her - perhaps we can arrange some links through her - the company she works for is interesting.....

H.: I'll have to look it up.

102. S.: Now further, the electric razor with batteries which was given as a present created a furore. All Ministers and prominent leaders wanted one, for example SEROV and SHISHLANI. It would be nice if we could find a French firm which manufactures these razors and build in the legend that this firm has made a gift of a number of razors to the Committee with an accompanying letter.

M.: How many razors do you need?

S.: Six. Next since on the 7th November they will celebrate the 44th anniversary of the Bolshevik Revolution it would be nice if some wine or cognac could be picked up with the vintage 1917. This would make a hit and especially since CHURAYEV requested this specifically. He even asked for a bottle of cognac like VARENTSOV's and his year of birth is 1904. I plan to bring CHURAYEV the odds and ends he asked for such as a good pocket-book, socks, etc. And I will get bottles of wine, vintage 1917, for SEROV, MALINOVSKY and CHURAYEV. I'll ask VARENTSOV to take the bottle to MALINOVSKY and when he is told that it is from the Colonel he had met who is walking around as a full Colonel for twelve years now and it is time that he should be proposed for General, I am sure that SEROV will not object. MALINOVSKY will probably say "Go ahead and write the resolution." I am not losing by the fact that I bring them presents, it is a prima facie evidence that they trust me by the fact that they accept my gifts. My legend is very simple, I got along well abroad, they feed me and give me small presents and I buy other odds and ends out of the money that I save. They even write letters and notes to me with their requests of what they want. Next. I would like to have some records by VERTINSKIY and LESHCHENKO. I gave one to SEROV and he is listening to it all the time. It is a rarity for Soviet people to have these records. Next

...../ I need personally

#31

I need personally a small gold lady's watch either Omega or Longines but the numbers should be on the dial. Then I need a whole lot of little bottles of perfume, the Serova and CHURAYEV asked for this as well as others. Such as Chanel No.5, Mitsuoko and Arpege, etc. But only little bottles; further CHURAYEV requested as well as FOMIN and KARAFILLI, sets of bill-folds, pocket-books and watch straps to match. And I need about twenty cheap ball point pens. And I need three small briefcases for CHURAYEV, VARENTsOV and BUZINOV. In addition many requested a medicine called Sustanon which is taken by injection. I think it is manufactured in Holland, maybe your doctors could help obtain it. In addition the insecticide you gave me before was very favourably received and they request more. I also need a lot of batteries of 30 volts and 15 - I think the brand name is Vertrix. I will leave the list with you and please get me more of these Ex-lax tablets as well as others which are similar.

103. The safe house telephone number was checked with subject to be sure he had it written correctly. He was told how to use French automatic telephones and was given tokens. Subject then reviewed his financial position.

104. S.: I was given 507 dollars in cash, 251 dollars have been computed for my food and for my lodging I can only pay a maximum of 36 francs daily. The room I now have costs 53 francs. I don't care what the cost is as long as my receipt will read 36 francs per day for lodging. (After discussing the possibilities of moving to another hotel it was decided that the easiest way would be for subject to request another room in the same hotel the price of which would be under 36 francs a day. Subject was told that this should be no problem since very adequate rooms could be had well within his limit. Subject was told that arrangements such as were made in LONDON were not possible in PARIS because it would risk security and falsification of a hotel bill could also be a problem and in addition the proximity of his hotel to the Soviet Embassy would make it likely that the Soviet Embassy would know what the normal prices of that hotel are).

...../C.: In addition

S.: In addition they gave me 370 francs or 75 dollars for my travel money, which would last five days throughout France. Please arrange an itinerary for me which would be consistent with my cost allowance for such travel.

G.: This sum is more than enough to cross the length and breadth of France if one were to travel by bus. (Subject showed an additional travel pass prepared by his Administrative Section. This will also be photographed, but in the safe house since he must have this document on his person. Subject showed all his other papers including a rail ticket back to the USSR).

S.: They wanted me to take a train back so that I could look around and report what I could see in West Germany on my way home. However, I have to have visas for Belgium and West Germany and I will speak about this at our Consulate tomorrow. If they will do this, fine - if not I will certainly pay the difference in roubles and fly back.

105. S.: This list of the possible 69 members of delegations who had been proposed to come here and of whom only a few will come should also be photographed. The names struck through in red have already been approved for coming here. The photography should be done here, however, since I should have the list on my person in case anyone asks me about it. When I was at the Embassy today I was received by KULYAVTSEV, Ivan Pavlovich. He is a Colonel. He is a fat husky fellow and is one of the two deputies to the Resident. Tomorrow I will be received either by the Rezident or by his Deputy. It seems that the Resident is travelling throughout the country now, but I am not sure. All this is what I wanted to report to you today and I request that you look over everything and on your further questions later I will be able to recollect supplementary details.

106. J.: He said that in a few days a delegation will arrive here that he must meet. To what extent will he be tied up with this delegation?

S.: All I have to do is to meet them and set them up in a hotel and then together with this KULYAVTSEV, to work up these points of interest for

...../each of the

#31

each of the delegation members to visit.

G.: Will you have to go to these points with them?

S.: Yes, that is possible, but it is really up to me.

J.: But he will not be tied up as he was with the first delegation to LONDON?

S.: No, not at all, and I must also mention that it is possible that no-one at all will come. There may be a decision to save money and not to send them or only to send very few.

107. S.: By the way, here is the SEROV family's request. (Reads long list and leaves with us to purchase for him. Subject then showed a small note-book full of purchase requests for his own family).

J.: I can see now why you need 25 days in PARIS.

G.: They must have taken three or four days of planning just to write this out.

S.: They took more than that. (Subject was explained that due to the inevitable interest on the part of the French who must surely know that he had at one time been an intelligence officer posted in Turkey, it would not be wise to meet too frequently and even if short intervals between meetings at the very beginning were used these should be stretched further as time goes on).

G.: First of all in view of this French expected curiosity it would be best for us to meet in the evenings and not during the daytime when it is too easy to be spotted. Although we would like to meet reasonably frequently to resolve all of our current business which is so important, in the early stages of your stay we will meet at longer intervals later.

S.: That is right; I agree.

G.: How about our next meeting? You have laid out your schedule for the day and what do you propose?

S.: How about six o'clock?

G.: That is too early, it is too light yet.

J.: He is tired, why should he not have a free day tomorrow and go out and we can meet on the day after.

...../ G.: Then

G.: Then we will meet the day after tomorrow at 19.30 because it will be dark then and you can go out with WINNE tomorrow.

S.: Very well, but will you arrange to have someone drop me off at the other end of the bridge because I don't know how to find it very well yet.

H.: We will do this.

108. S.: Will the materials that I brought be available tomorrow?

H.: No, not tomorrow, but possibly the day after.

S.: I wish you to have a chance to look at it, since there is much about it we should discuss.

G. That is exactly what we want to do and that is why we want to meet the day after tomorrow.

S.: That's fine, then you will study everything tomorrow and the day after I will meet you at 19.30 at the other side of the bridge.

G.: Do you want to look at the map of PARIS to see exactly where you live in relation to the bridge?

S.: Not tonight, I am very tired and you can show me next time.

H.: We will drop you off in the vicinity of your hotel.

M.: George and I will go with him and George will drive to that area since he knows the route.

109. A farewell toast was drunk as Subject made his farewells and left with M. and G. at about 23.15 hours. He was delivered without incident at a slow rate of speed in the vicinity of his hotel at approximately 23.35 hours.

---oOo---

COPY

(31)

Meeting No. 32 on 22nd September. 1961.

1. Subject was met at the RV point which is at the end of the Solferino footbridge at 19.30 hours by Roger and Harold. The party arrived at the safe apartment at 19.45 hours. The pick-up was covered by Michael and it went off with no incidents.

2. G.: Please let me have all documents which should be photographed now, so that you can have the originals back before the end of this meeting. We have arranged to have them photographed.

(Subject gave his list of delegate candidates out of which a number would be arriving in PARIS. This was a list of four sheets including 89 names. The other documents was his GRU Administrative Travel Order.)

S.: Later I will show you which people on the list are KGB.

3. (Subject took out his notes and said) - Although we are fairly careful with our friends the French, I found out quite a bit of information which should be of considerable interest to them and of course to us. I will now review what I have done in this respect since I have arrived home. Yesterday at 09.00 hours on the second day of my arrival in PARIS I went to the Soviet Embassy. I was received very well by the Resident Gen. Major Ivan CHEREMEYEV who had just returned from MOSCOW where he was on temporary duty. He knows me for a long time since we worked together in the Mandate Commission which was processing students for the M.D.A. class with which I was involved. He was a Colonel then. I was astounded at his affable and direct attitude towards me. He said that several cables had come in about my arrival and I explained that I was delayed by the visa application. He said that he wanted to talk to me at length later but that he was about to have an operational meeting with his case officers on intelligence matters and he wanted me to participate at this meeting. He said that he would welcome my opinion on various matters at this

/meeting....

APPROVED FOR RELEASE
31 MAR 1992

meeting and I replied that I would be glad to be as helpful as I was able to be. He added that since I have come for twenty-five days and will be under his jurisdiction, in addition to resolving my own missions he would like me to help them.

4. S.: Their Rezidentura is on the second floor of the Embassy building. Only the Military Intelligence people of GRU are on the second floor - Strategic Intelligence - and all of the rooms have been checked out. Secret matters may be discussed there except that names, dates etc. are not to be mentioned. I immediately saw two officers there with whom I had studied at the M.D.A. and who graduated with me in 1953. The Military Attache who was introduced to me was surprisingly Gen. Maior SOKOLOV who was the former Chief of the Foreign Relations Section in MOSCOW. Formerly Gen. Maior Michal MASLOV was the Military Attache here and he is now the Chief of the Foreign Relations Section in MOSCOW, while SOKOLOV has replaced him since a month and a half. The Naval Attache is also here, who is a Captain 1st Rank and who was the Assistant Naval Attache in Turkey while I was there. He is Vladimir PROKHOROV. There are many operational case officers under cover and I must spot every one of them who is here in PARIS. I will also spot all KGB officers, of whom I have already noticed several.

5. S.: We sat at this meeting from about 09.30 until 15.00 hours. The first deputy to the Resident, Igor Aleksandrovich ANANYEV was also there. He is under cover. The other deputy is actually second deputy KUDRYAVTSEV, the Counsellor, who is concerned with science and technology and whom I met two days ago. I was introduced as a GRU Headquarters officer on TDY in PARIS who would participate in the meeting. The topic of the meeting was to review the missions of GRU to the Rezidentura in France on the acquisition of military materiel samples and data (dobyvaniyu voennykh obraztsov vo Frantsii). These military samples consist of weapons and documents on their technology. Then every

/mission....

mission was discussed point by point. Every case officer will discuss his mission and this case officer was requested to detail the exact status of his progress in accomplishing his mission. Even Gen. Major SOKOLOV was called upon to report, but he was not required to stand up to make his report. Even as Military Attache he has a mission here which is to obtain data on weapons or the weapons themselves through the Attaches of the countries of People's Democracies here in Paris. The Poles here have succeeded in making some penetration and have had some military samples available to them. I will report on all of these items in a moment since it is my duty to report this to you in the first instance. How you advise and warn our French friends is up to you; this is a secondary matter. In addition possibly I may succeed in fulfilling a tiny portion of these missions since some of them correspond to my own missions such as obtaining data of material, etc. which

6. S.I. As you can see the position of Gen. Major SOKOLOV as the Military Attache here is consistent with the re-organization I reported to you several months ago, namely that all Military Attaches should be strictly cut off from directing operational work, which is done by the under-cover Resident. The missions set forth to all Residenturas is to obtain by every possible means such as by monetary payments through agent networks, through contacts and acquaintances and even to steal if necessary, in short by all and every means using personal contacts, the countries of People's Democracies and Communists. The Communists here are very active and they are rendering tremendous assistance to the strategic intelligence case officers. This again invokes my constant remark to you, namely that maybe I am a complete fool but I cannot understand at all how Communist Parties are not completely eliminated, Communists brought under severe control in democratic countries, especially since they do such constant and considerable harm. I told you last time that it was a Communist source that reported about the plans for redeployment of 230 military aircraft.

7. S.I. CHEREDEYEV was very severe with his case officers but ...

/very...

very intelligent man; for example, when one case officer reported that he had assigned his agent the mission of obtaining two weapons out of his total mission of fourteen for fear of compromising himself to his agent, CHEREDEYEV called the case officer a fool, saying that he had already compromised himself by requesting the two weapons (or assemblies thereof) and had he given the agent the entire fourteen items, possibly by now some of these items could have been procured instead of waiting for the procurement of the two requested and holding back the other twelve until the first two were obtained. The officers are afraid of him, particularly since he has been promoted to General. Previously he had been the Chief of a Napravlenie and later the deputy to KONOVALOV, the Directorate Chief in GRU.

(8.) S.: The Communists are sitting all around and have penetrated everywhere. I am sure that they are bringing great harm to our mutual work and are hurting De GAULLE's domestic and foreign policy.

(9.) S.: The missions to obtain military weapons and material in France by the Rezidentura is duplicated in the Rezidenturas of all capitalist countries. The emphasis here is not so much on French military armament but on U.S. and British armament. In the list of items desired there is a tremendous number of items of U.S. manufacture. They know the nomenclature of all latest items of equipment and weapons. They could only know this due to some look out of U.S.A. About 90% of the items listed were of U.S. manufacture but these overlapped military equipment mutally used by Americans, French and West Germans, in short all NATO equipment.

(10.) S.: CHEREDEYEV said that the Rezidentura in the U.S. A. has given them the leads regarding the weapons which were the basis for the missions in France. One item was the small calibre U.S. mortar which has a very well developed system for targetting (tsentrirovanya i navodki). It can be well orientated along three planes. The mission is to obtain the mortar itself or, if that is not possible, its photograph and full

/technical....

technical data. Another mission was to obtain the U.S. "NATO" rifle and the cartridges for this rifle. They also wanted the latest models of the very well-developed U.S. and British gas masks. They are particularly interested in the filtering substances which have a very effective adsorbtion quality. Specifically they are concerned with what I believe is technically called the breathing cassette in which the filtering segments are placed. A great priority is placed on obtaining the secrets for anti-corrosive treatment of submarines and the submerged portions of Naval vessels. This is a repeat mission since they have been after this for a long time. This is a chemical type mission and our vessels require much more frequent dry-dock repair than the NATO vessels. Then there are twenty to twenty-five detailed missions involving various items in electronic technology applicable in rocketry. They are interested in all types of electronic units and assemblies of U.S., English or French manufacture, that are used in radio, radar, measuring instruments and guidance systems. Sketches and diagrams are particularly desired. Another item is a small U.S. rocket launched from aircraft which is capable of creating atmospheric disturbances against radar action. Apparently these rockets emanate some electro-magnetic waves which cause this disturbances. This serves to jam enemy radar beams. The way they explained it was that after firing this instrument descends slowly on a parachute and jams radio and radar.

11. S.: A universal mission for all Rezidenturas, but particularly here in France is to visit all chemical factories possible to determine the composition of the new solid fuel for rockets which has been developed by the French. They say that the French already have hundreds of solid fuel cartridges which are suitable for firing rockets. The French are considered to be world leaders in this field. Another requirement is to obtain all possible data on heat resistant steels. In this connection I found out that the nimonic series have been developed in U.S.A. and not in England. However, it seems that they are working together with the

/British....

British in the development of heat resistant steels. In addition all data on the components of liquid fuels were also missions. The above comprised the basic items listed as missions and each case officer had a considerable number of missions to fulfil. But from the reporting that I heard by the individual case officers only a few missions have been accomplished and no case officer had fully accomplished all his missions. Another item I forgot to mention was the acquisition of electronic Naval depth gauging instruments. These were of U.S. and British manufacture. Missions regarding documentation consisted of technical data on steel production, rocket fuel production and all documentary data covering the items listed above. These missions for the obtaining of documents were also distributed by CHEREDEYEV to his case officers.

12. G.: How many case officers were present?

S.: There were ten officers present yesterday but these were not the whole contingent. Many were not permitted to attend. Let me see, CHEREDEYEV was there, his Deputy ANANYEV, the Military Attache SOKOLOV, the Naval Attache PROKHOROV - he has been here maybe four or five months - then Mikhail Kuz'mich SOLOVYEV - he is a GRU officer who was previously in GENEVA and he was transferred here with his wife and two children; he is in the technical group where there are also two KGB officers. There were five other officers present whom I will identify for you from photographs when you show them to me. I also visited the individual offices of the other GRU men who were not at this meeting and I knew several of them and greeted them, for example, GRIGORIYEV, Valentin, Captain 2nd Rank, who had studied at the MDA as my classmate. He works for PROKHOROV. CHEREDEYEV asked one of the five officers I did not name to send a cable to GRU stating that I had arrived safely. As a summary of this meeting all officers stated that they had assigned all of their missions for execution to their agents. They have a large number of agents and, as I mentioned before, they are greatly helped by the Communists here."

/13. ....

12

13. S.: After the meeting I spoke to the Rezident and his deputies and detailed my mission. I said that I will try to find some new acquaintances by visiting the Soviet Exhibition and using the few acquaintances I have met in MOSCOW at the French Exhibition, should a contact prove to be of interest to the Rezident I would turn him over. I mentioned that I had the mission of obtaining some technical data and to find dead drops. The Rezident said that they had many dead drops in PARIS and that I was not to waste my time here but when my itinerary for travel through France would be established, then the Rezident would tell me in what towns dead drops would be desirable. He even offered me an operational car and chauffeur for my trip through France.

14. S.: At the meeting I was asked to speak and I told them of what items were purchased at the French Exposition in MOSCOW. The purchasing commission was the same one that had been to LONDON and at the French Exposition they purchased items totalling 2,600,000 new roubles. We purchased much of the electronic equipment which was shown there and for GRU considerable optical equipment was purchased. There were two officers from the GRU in this commission. One was Gen. Maior of Engineers who works in the Information Directorate, VYSOTSKIY, and there was another Colonel from the Information Directorate in the Commission. For GRU they purchased automatic pilots which can operate in the far north, electronic equipment and optical equipment. The one who checked and authorised this large purchase was GVISHIANI's father-in-law, a Deputy of KHRUSHCHEV's and a member of the Presidium, KOSYGIN. I also mentioned which of the items they had listed, GRU considered to be of prime importance, since I was briefed on this prior to my departure and I also mentioned the symposium to be held at OXFORD on paper production. I also supported CHEREDEYEV's statement that duplicate samples are necessary, even if it has been reported that a certain item had already been obtained in another country.

15. S.: CHEREDEYEV was very please with me and was most courteous. He gave me French cigarettes and said that operational funds, which I

/had not....

had not been given in MOSCOW, were available at any time should I need to entertain anyone. He escorted me to the door, asked me to come back any time and I went to dinner with ANANYEV and SOLOVYEV, to the TORGPREDSTVO where they have a dining room, near the Bois de Boulogne. After that I rested and went out with WYNNE and had a very nice time.

16. H.: Do they know that WYNNE is here?

S.: No. Let us talk about this now. I have a proposal which I think will simplify things for us considerably. Let me finish first describing circumstances leading up to this proposal. Today I went to the Embassy again, then I went to the Exposition with SOLOVYEV by metro, because he wanted to show me how the metro runs. There SOLOVYEV introduced me to the deputy director of the Exhibition. The Director is a clean man from the MVD but the Deputy is our man from GRU. His name is Leonid Vassilyevich FEDOKOV, a Colonel of GRU, under ROGOV like myself, who works under cover of MVD. I spoke to him for a short while and he said that an important delegation would be coming at 3 or 4 that afternoon and would I please return at that time. I had lunch with WYNNE and I went back to the Exhibition. There I spoke to him about my missions and I mentioned that an Englishman who has close ties with the GNTK and who had been at the French Exhibition in MOSCOW will possibly come to the Soviet Exhibition in PARIS for two or three days. I added that this man has many contacts with firms and is planning to organise a mobile exhibition in U.S.S.R. in 1962. I told you that WYNNE had mentioned this when he was at the Committee in MOSCOW, and there is a record of this discussion there. WYNNE also officially stated in the Committee that he would come to PARIS for two or three days. This is also on record. Therefore it would be very good if WYNNE would go to the Exhibition for two or three days. He should not go off to BELGRADE on Tuesday. In about ten days the Exhibition will close and after that we do not need WYNNE here at all. It is going to close on the 3rd of

/October. ....

October. WYNNE can even come to the Embassy to ask for me or I can simply meet him at the Exhibition. In that case I will tell the Embassy that the representative of many British firms who has close contact with our Committee has arrived here and in addition I can say that WYNNE has promised to bring me some worthwhile documentary material. This would be most plausible and in my view very correct. Of course if you say no, then WYNNE can go to BELGRADE, but please consider this. It is a fact that people come to this Exhibition from many countries, and WYNNE did say at the Committee that he would come here. If I met WYNNE at the Exhibition I could take him to a private office with NEGREV, pour him out operational wine and he can say that he has brought me a package of some material. This material I will deliver to the Embassy. I am just giving you a rough plan and you can arrange the details as you see fit. But this would simplify our work and be very good for me.

17. S.: I already met one businessman through NEGREV; I have his name written down in my notebook which is in my coat pocket. The man I met through NEGREV is Marcel WACHBRESS from the Society of Franco-Russian Friendship. He speaks English, though poorly. He even criticised the Exhibition, he asked me why there were certain technical items there which could be of interest to specialists only and nothing from the country itself. There is nothing from Soviet life here. NEGREV told me today that the KGB are everywhere, no matter in what direction one spits. They are in the stands, amongst the interpreters and the guides. That's all I have on the Exhibition and with respect to WYNNE I again repeat that if he was to work with me for two days it would be very good for us and it would also strengthen WYNNE's position with the Committee since I would report that I met WYNNE here and that he brought me something.

18. S.: Tomorrow morning I am going directly to the Exhibition with Ivan Pavlovich KUDRYAVTSEV, the Deputy for Science and Technology,

/because....

because one of our Ministers is arrivingthere, I believe from the Ministry of the River Fleet. In general up to the time of the closing of the Exhibition I will be going there and to the Embassy every day and after that I will take a short trip through France. Maybe I could pick something up either directly along the line of my mission or something similar to the missions I mentioned earlier. Some filter material for the gas mask even if it isn't the real thing, or a shell cartridge. I need your support in these things because it will help me attain greater stature and as a result I will be sent out more often on TDYs.

19. S.: The problem of my room has not yet been solved. What has happened is that they moved me out of my room to another one in the same hotel with the price just the same. (It was decided that WYNNE would get subject a room at the Palais d'Orsay and move subject into it if a room is available. The price there is 34 francs per day.) This is all that I have to report.

20. G.: We have lots of questions. Let's begin with the clarification of the information you gave us the day before yesterday.

S.: Yes, and please let me have my own reference notes.

G.: Here is the most important question. At the very beginning of your report you used the expression "if necessary KHRUSHCHEV will strike" at the time of the signing of the Peace Treaty. By whom was this specific statement made and what were the circumstances?

S.: This expression was not told to me by only one person. This concept was expressed to me by VARENTSOV and also by POZOVNYY and BUZINOV and in addition I have heard in the General Staff from those who are in a position to know and with whom I have friendly relations the same thing. This is all tied up with the general theme I reported that if you retreat from BERLIN then things will be quiet again for a year or a year and a half until KHRUSHCHEV starts yelling again that we have achieved a victory and that KENNEDY had been afraid.

G.: What was the context of the circumstances when this was said?

S.: Specifically BUZINOV asked me if I had 500 roubles with which

/to get....

#3

to get some supplies of butter and sugar because he felt that things would be very bad in October. I asked him if he were not being panicky. He said "No. I am an old soldier but I have a feeling from what I see, and you must through your channels, how difficult things can be in October. I have been running from one place to another and sending officers to all kinds of bases where preparations to the point of combat readiness are being made. And I know that if the West begins to fire after the Peace Treaty we must be ready to strike them a hard blow and we do not have sufficient reserves of rockets.

21. G.: What specifically does KHRUSHCHEV lack to follow through an attack on the West?

S.: He does not have sufficient number of atomic warheads. They published in our press that we have 30,000 atomic weapons of various yields and many fools believe this; they have various size yields, but few - they are still making them. Similarly, although the R-11 and R-12 rockets have been found to be satisfactory and are being mass produced, the R-14 is still not in serial production.

22. G.: What else does he lack?

S.: Trained personnel cadres. Several years more are required. Is it not significant to have 2,500 students at one time at one Academy, the DZERZHINSKIY Academy in peacetime? And these can be seen going to their studies every day.

G.: Any other fundamental items - how about submarines?

S.: There are insufficient submarines. However, they do have an announced plan for attacking the United States and England using ICBMs, submarines and aviation. This was announced at the reception by KHRUSHCHEV himself, and he also mentioned that they had a nuclear weapon of one (sic) megaton.

G.: And who told you specifically about each of the other deficiencies?

S.: VARENTSOV told me many times about all these deficiencies I

/have....

have mentioned above. On this I swear.

23. G.: What you have just answered would answer item 21 of your notes, since you just said that KHRUSHCHEV spoke of this at the reception you referred to.

S.: That is correct. I also forgot to mention that there is a lack of perfected electronic guidance systems. There has been a little quantity of rockets developed and with this small amount KHRUSHCHEV is attempting to scare us. However this maniac before the end of his life may desire to make this tremendous attack and that is what all the Russian people are afraid of and that is why I made the suggestion that it would be worth while to assassinate him. We would relax for a year or two before a new leader emerges and there would be a big fight for control of power. The most outstanding candidate now, the smartest, is MIKOYAN, who is still an old Leninist. MOLOTOV is ill and will not compete, KOZLOV and BREZHNEV are complete fools and these two don't like MIKOYAN since they are stooges of KHRUSHCHEV. They would not move up CHURAYEV either, he is a second rate man and he is ill; he is 57 years of age and he almost died recently - I must tell you about this.

24. S.: Last May 1st when I was in LONDON, CHURAYEV was at the May Day Parade and caught a severe cold and on the 2nd May there was a serious mine cave-in at KRIVOI-ROG and many miners were killed and KHRUSHCHEV ordered CHURAYEV to go there personally to investigate the disaster, since he was a Chief in the RFSFR. Sick or not CHURAYEV had to go and he was taken back from there with extreme pneumonia. He almost died and he was practically dead clinically until a medical colonel succeeded in giving him sufficient transfusions to bring him back to life. CHURAYEV related all this at the birthday party.

25. G.: On these general exercises in October what components of the satellite forces will participate?

S.: Evidently I didn't make this sufficiently clear in my report.

/In these....

In these general manoeuvres there is not a single unit which will not have its wartime military mission to accomplish. All will participate since a mock war will be declared. Irrespective of where one sits in what headquarters, all elements of troop deployment per phases such as D+5, D+10 etc. will be undergone, even to the point of establishing bakeries, laundries and field hospitals.

G.: And will these exercises be done as fully as you say by the satellite forces?

S.: Yes, just as completely. Of course, firing will be restricted or simulated and atomic bursts will be simulated also, but VARENTSOV and BUZINOV told me that there will also be rocket firing exercises. These may be done in the KAPUSTIN-YaR area or in some isolated place. This exercise is to train the rocket crews in target aiming. Although there will not be a general mobilization, this mass deployment of the entire standing army as it passes through its manoeuvre phases will put it into combat readiness to the extent of the forces now under arms. The Air Force and all services will participate and offensive as well as defensive phases will be scheduled. I forgot to mention another thing - all forms of signal communication will be intensively used to train those units properly.

26. G.: Please explain how many prominent commanders such as MALINOVSKY and VARENTSOV, who will be delegates to the Party Congress can attend both the Congress and be at the manoeuvres.

S.: This is very simple. I myself participated at the Party meeting in the Kremlin when ZHUKOV was ousted. KHRUSHCHEV and the new Minister made a speech and in half an hour they left the Assembly which continued to make other speeches and cheered KHRUSHCHEV's policy all day long. Therefore at this Party Congress they will listen to KHRUSHCHEV's opening speech which will be the programme for the Congress, and go. The rest of the delegates will make speeches for seven to ten days. The big people will not attend discussions by delegates from kolkhozes.

/They will....

They will only be present at the main presentation of the programme - and go. I also heard from POZOVNYY that during the Party Congress the entire PVO system for the defence of MOSCOW will be put on a strict combat alert.

27. G.: How about China?

S.: China will have a separate role in this. They will guard the possible hostile direction of American attack from Japan. China will also be represented at the Congress but it is still not known whether MAO TSE TUNG will come personally or not. They very much want to have him come to MOSCOW as a popularity gesture for the Congress. When I find out I'll report all this to you because I propose to make a personal visit on CHURAYEV.

28. S.: I would like to ask a question at this time if I may.

G.: Go ahead.

S.: I have been thinking for a long time that it would be a great advantage for us to invoke a small local conflict with the Soviets in some remote area, something like the Finnish War or the conflict in the Far East in the past. KHRUSHCHEV does not want this. It should be demonstrated that KHRUSHCHEV is the sole proponent of nuclear warfare and the only warmonger amongst all nations. He says that a local conflict would develop into a nuclear war. This is not true and a conflict using conventional weapons in Korea or Vietnam could be made. If a local conflict was created on the borders of Iran or Pakistan or Turkey and there was enough provocation for this, by the Americans and British, and a Soviet Army group of almost fifteen divisions were to be deployed in this direction, say 500,000 men, and both sides were employing conventional weapons, you would be surprised to see how many mass desertions by officers and men would take place from the Soviet Army to your side. Then this svoloch would see himself how weak his position is and he would have to cease all hostilities to patch up his Army. The Army today is seething, KHRUSHCHEV has abused it severely by his extensive discharges in the past, which is something that STALIN did not do. KHRUSHCHEV is called "the abuser of the Army". Our leaders should

/recognise....

recognise how much dissatisfaction there is amongst the officers of the Soviet Army. Of course it is not for us, particularly for me, to suggest political action, wiser people will do this and it is not even our concern. However, I mention these things because I feel you should report the extent of the dissatisfaction in the Soviet Army. KHRUSHCHEV is today the new HITLER, an atomic HITLER and with the help of his stooges who support him he wants to start a world conflict so that prior to his death as he has said, "I will bury Capitalism."

29. G.: Will you explain very carefully this very important statement you made. You stated that on the 8th September there was a nuclear detonation using a rocket as a delivery means with a warhead of 16,000 kilotons. Do you realise that this is 16,000,000 tons or 16 megatons?

S.: Yes, 16,000 kilotons -- wait, I beg your pardon, 16,000 kilograms.

G.: That makes sense because that would be 16 kilotons.

S.: Yes, of course, that's what I had in mind.

G.: Then, will you tell me why was it specifically 16 kilotons, since usually your terms refer to 5, 10, 15 etc.

S.: Yes, that is true, they usually go by fives but evidently they have invented this particular yield and that is what they tested, but why, I do not have any idea.

30. G.: Have you ever heard even from rumours what is the largest Soviet nuclear weapon in TNT equivalent?

S.: I have heard of astronomical figures and it was announced that there is a 1 megaton bomb, which a hydrogen bomb could produce; however, I do not believe that they have tested this yet and they are still working on it. VARENTSOV never mentioned this, nor did any other person with whom I have talked.

31. G.: Are the R-12 and the R-14 rockets now VARENTSOV's rockets?

S.: Yes, they are VARENTSOV's rockets.

H.: Let us go a little further into this one. In VARENTSOV's

/article....

article written at the beginning of 1961 he complained that he was not being given an operational tactical rocket with a range greater than a thousand kilometres, but these rockets have ranges which are much greater. Does he know when this change took place. (G. translates)

S.: At that time there were no R-14 rockets, they were only being made and now they do exist, but now he has been given them.

H.: But the article was written in the second issue of 1961 and these rockets must have been well advanced so VARENTSOV must have known that they were to be produced. Does he know if there has been any change in the subordination of missile control during this period between May and September? (G. Translates)

S.: This is entirely possible. And it is possible that they have given a portion of MOSKALENKO's rockets to VARENTSOV.

J.: How does he know that the R-12 and the R-14 are VARENTSOV's?

H.: Even though VARENTSOV went to their testing ground he might have gone there as an observer.

S.: When VARENTSOV went to KAPUSTIN YaR for the rocket tests he went there to accept them into his command from industry. He would not have gone there if they were not his rockets. He went there under the directive of the General Staff and of the Ministry of Defence.

G.: Did VARENTSOV tell you this?

S.: Yes, he said "I am going to KAPUSTIN YaR" and at the same time BUZINOV told me that there are such rockets.

32. H.: But the R-14 is still in the strategic range since it can go 4,500 kilometres with an atomic warhead and much further with a conventional warhead. Therefore it can't be called a tactical weapon.

S.: But none of us know that the R-14 will not be allotted to MOSKALENKO to fulfil his missions and also to VARENTSOV to fulfil his. In addition it is a very closely knit over-all command, both are under governmental control and particularly in a budgetary sense and if in the earlier stages VARENTSOV's rockets needed a greater range, MOSKALENKO

/would....

41

would have turned over some of his rockets for VARENTSOV's units to launch. The two commands are very closely co-ordinated, and it will continue to be this way and in case of war there would be a lot of rockets which would be turned over from one command to the other. This was foreseen and the commands are well controlled centrally.

G.: Is it not true that a long range rocket such as the R-14 could be used by VARENTSOV at shorter ranges.

S.: Of course it can. Any rocket can be fired at shorter ranges than its maximum but it is efficient to use a rocket at its maximum range. It would not be efficient to use such a large rocket with a 2,500 kilometre range to fire at a target a thousand kilometres away, when an R-11 could do this. However if there are no R-11s then a larger rocket would be used.

33. H.: But he did not say that VARENTSOV at any time had specifically stated that he is taking over command of the R-12 and R-14 rocket units.

S.: No there was no occasion for VARENTSOV to say this to me in those terms directly. He only mentioned that he lacked this and that and that MOSKALENKO has this and that, but the R-14 may be allocated to both VARENTSOV and MOSKALENKO by the High Command. I reported to you in LONDON that there is a tendency to unify both commands.

H.: Has he heard any more about this unification for single command since he last told us about it in LONDON? (G. translates)

S.: Yes, I had a conversation about this with BUZINOV only recently. BUZINOV does not wish to leave VARENTSOV's command and he is now working as the Deputy to the Chief of an OTDEL. He said that if VARENTSOV becomes the over-all unified commander his Adjutant would have a Major-General's slot and BUZINOV is hoping for this since he has been a Colonel for a long time. He hopes that this unification will take place quickly so that he can be with VARENTSOV and become a General/Adjutant. At this time the General Staff considers that this extensive reorganisation is difficult to do when the present political situation is so critical.

/If there....

If there were a relief of this tension they would push through this organisation in three or four months. BUZINOV knows the situation because he is very close to it and they are not doing this now because of the present situation. However, the concept has not been rejected, nor has it been considered incorrect and it will undoubtedly go through. In case of war now both commands will be very closely co-ordinated.

34. S.: As you know VARENTSOV is now a delegate to the Congress and will be nominated for a candidate for the Central Committee. We can't tell what will happen but he is in good standing. The Minister came to his birthday party, and he didn't go there because he loves VARENTSOV but it was probably suggested by the Central Committee, of which MALINOVSKY is a member. CHURAYEV, however, came of his own free will. In the past VARENTSOV had called MALINOVSKY a fool and from my own observation I did not think he was very bright and when we have time I will tell you more about him later - that is, how he behaved at this party. Now VARENTSOV is being kept in a prominent role. They made him a Chief Marshal, gave him the Order of Lenin and the Minister came to his party; this is rare for the Minister to do particularly as he had to go to LVOV the next day. Incidentally to this birthday party ZAKHAROV, the Chief of Staff, PIRSKIY, CHUIKOV, the new Chief of Civil Defence and ZHDANOV were also invited, but none of them were in MOSCOW on that day.

G.: Wasn't KARI[illegible]LI there?

S.: Yes, he was, didn't I mention him?

35. G.: Who told you that the atomic warheads were all ready at the launching site?

S.: That was BUZINOV. And VARENTSOV said this also, he told it to POZOVNYY and to me.

H.: That's all right for NOVAYA ZEMLYA where they are doing the testing, but how do you know that the atomic warheads were delivered to these other places such as NORILSK and Frants-Josef Land.

/S.: ....

S.: I know that there were atomic warheads there because BUZINOV mentioned many officers who were being sent for one and two months duty to the bases I mentioned because there were atomic warheads there.

H.: The thing to determine is whether these warheads were always at these bases or were they recently moved there.

S.: I understand. The atomic warheads were recently moved there from all of their specific storage areas wherever they may have been, because they were to be placed in a position of combat readiness to support KHRUSHCHEV's belligerent policy.

A short pause was made to change tapes.

Side 2

36. G.: Did Sergei Sergeievich by any chance mention the range dispersion (the Vd) of the R-12 rocket?

S.: No, he did not and I couldn't very well ask him, but it seems to me that the Vb of 160 metres is a more significant figure for us since it is the lateral dispersion.

37. G.: Is the constant travel of VARENTSOV's and MOSKALENKO's representatives to the missile bases a recent development or have they always been sent there?

S.: They have been always going there, even before. If that were not the case MEDEKLIN would not have been killed. They are now going to the testing of nuclear detonations delivered by rockets and they are going more intensively and frequently now because KHRUSHCHEV has insisted that the launching of rockets with atomic warheads should be accurately worked out as soon as possible. KHRUSHCHEV even insists that they personally make inspections. Therefore both PYRSKIY and SEMENOV have been sent out and when necessary VARENTSOV goes also, since there are many sites at which tests are being made and many types of rockets to be tested. Trips are being made continuously by the officers concerned. This intensive testing is a clear-cut example of the preparedness of which I have mentioned.

38. G.: And this is also true for NORILSK and VORKUTA?

S.: Yes, and to give an example VARENTSOV said at his party

/that....

7

that he had just returned from SVERDLOVSK where he visited factories. I will send you a recent picture I have of VARENTSOV. You will see yourselves how tired he looks. But though he limps and moves around with difficulty, he is constantly flying around like a young boy because KHRUSHCHEV will have it no other way - just look at the example of CHURAYEV who almost died. They are all afraid of KHRUSHCHEV and must obey his orders or they will lose all they have. CHURAYEV bragged that he had a dacha given to him with 12,000 roses growing there, that is how these parasites live on the workers' blood. A capitalist doesn't live that way.

(39.) H.: I would like to get this absolutely right - who told him and when that atomic warheads were taken out of storage and delivered to the missile bases? (G. translates)

S.: When the situation over BERLIN became more tense, KHRUSHCHEV with the support of the Central Committee ordered that these atomic warheads be placed on a ready status and be delivered to the launching site in order to support his political policy with force and KHRUSHCHEV realises that we may strike him first.

G.: But who told you this?

S.: First of all BUZINOV, then, when I was in Headquarters of Artillery, I heard from the various officers that they were being sent out to determine accurately in practice how long it takes to move up atomic weapons to their proposed launching positions, how long it takes to assemble and mount them into firing positions, what the reactions of the troops are to the concept of employing such weapons; in short, all previous paper calculations were now being checked out in practice. At the same time they are bringing themselves into a position that if atomic weapons are necessary to use they will be in position to be used.

H.: Did he hear about the movement of these warheads before the phase of atomic testing or after this period?

S.: They were moved up before this period and then the decision was made to test them by using rockets.

/H.: ....

40. H.: But they are not being tested at all missile sites. They have tested them at NOVYA ZEMLYA but not at every missile site. How does it work out when they move these atomic warheads to the various other sites when they have not already tested them? The two things seem illogical. It is logical to take warheads to the places where you are going to test them, but the testing is to get ready for war and there may be minor adjustments on parts that they haven't tested before. How can they in fact then move them to these other areas to be ready to be fired when they have not tested them? This appears to be a contradiction.

S.: There is no contradiction. Unfortunately we do not know the co-ordinates of the sites where they are being tested and the co-ordinates of the sites from which they will be launched. And I am sure that the testing is done at sites which have no relation to the launching sites that would be used in case of war. All we know are the general areas but it is a fact that these sites are not the same, for example, even on NOVAYA ZEMLYA there are concealed storage areas and launching sites all prepared for use in case of war but the actual testing that PYRSKIY is running may be several hundred kilometres away on NOVAYA ZEMLYA. Therefore there is no contradiction.

41. H.: Can I ask the question another way? Did he know in advance that the tests were going to start.

S.: Yes, I knew in advance that KUPLEV was flying off and that the BERLIN border was to be closed four days before it happened. And I knew about two weeks ago that it was indispensable for us to test nuclear warheads with rockets as the delivery means. I knew this from BUZINOV and VARENTSOV said "Rockets must be tested because we are not sure how they will work with atomic warheads." This, I knew after WYNNE left MOSCOW.

H.: How many days did it start after WYNNE left? It could only have been one or two days.

/S.: ....

S.: No, it was about the same time, let me look at the calendar. The BERLIN border was closed on 13 August, I knew about it about the 9th or 10th of August and I wanted to pass this information via the dead-drop on Monday. But already I heard the radio announcement that KONEV had flown off so the news was no longer secret. The fact that it was necessary to test nuclear weapons with rocket carriers I found out only after WYNNE left. I found it out the following week and it was clear then that KHRUSHCHEV was using the disagreement over the BERLIN status as an excuse to untie his hands with respect to nuclear tests. Obviously if I had known of this earlier I would have given this to WYNNE as a first priority instead of the cassettes. Later I considered putting the information in the dead-drop and calling and then I would have observed to see if it were picked up within one hour and if not I would have retrieved my message from the dead-drop. However, you warned me not to do this unless it were a case of great urgency and I was not sure how urgent this was.

G.: Before you leave we will establish for you clearly what is urgent and what is not.

42. G.: Now on NOVAYA ZEMLYA is there a polygon there or operational launch sites, or both?

S.: It is a fully equipped launching site for wartime as well as a testing area, and I have heard in our headquarters that our people were disturbed because the Americans and British have spotted our interest there since your submarine was in that area.

G.: And FYRSKIY is in charge of running the tests?

S.: Yes, he is. He is the first Deputy to VARENTSOV.

H.: How does he know that he is actually running the tests? This is something that I think needs a lot of definition. First of all at one stage he did say that apart from FYRSKIY running the tests, LOSKALENKO would be represented there. Then surely there are the atomic people who would be interested in the atomic part of it, then who is in over-all charge?

/S.: ....

S.: On NOVAYA ZEMLYA PYRSKIY is responsible for everything. And the fact that a representative from MOSKALENKO is there and representatives from the Central Committee, the Council of Ministers and even from committees that we don't know the names of now, they are simply there as observers, and I heard the Defence Minister express himself about PYRSKIY. I wish I had a recorder so that you could listen yourselves.

H.: If PYRSKIY is in charge of it, does this in fact mean that only testing of rockets as carriers for atomic warheads in the tactical range and not within the strategic range is being done and if testing is being done in the strategic range, where is this being done?

S.: This question is not correct. What is being tested is the action of nuclear weapons using rockets as a delivery means. What is important to determine are the deficiencies and errors in the rockets' operations etc. etc. All are present, those who will launch rockets at great ranges and those who will use rockets at smaller ranges. Even those who plan to fire at shorter ranges may tomorrow be assigned a mission to fire at greater ranges. The main thing is to make the tests. It is not important who is in charge, even though PYRSKIY is VARENTSOV's representative, there are other representatives there from MOSKALENKO. There is after all a centralised control by the Party and a centralisation of the All Union military and political organisation. And therefore they decided to assign PYRSKIY, first of all he is an engineer, a Colonel General, a representative of a Chief Marshal. He is an engineer by background and a specialist in atomic matters, and he is concerned with plants which produce fisionable material. After all these plants may produce atomic warheads one day for VARENTSOV and another day for MOSKALENKO, the plants are the same. So they appointed PYRSKIY and there is nothing unusual about that. MOSKALENKO was not offended by this at all. And if MOSKALENKO personally had not been there his deputy could possibly be of lower rank than VARENTSOV's representative.

/43. ....

43. G.: But does VARENTSOV have an over-all control, since PYRSKIY is his deputy in deciding what and how should be tested?

S.: No, PYRSKIY received a composite order from all concerned and he will submit his report to the Council of Ministers, the Central Committee and the Minister of Defence. He is there as a Government representative and anyone else could have been appointed if he were considered to be qualified.

H.: He stated that PYRSKIY was the expert on atomic matters. Can he give us any information on PYRSKIY's background?

S.: I don't mean that he is an atomic expert as such. He is an all-round intelligent and is a well educated man. He understands nuclear energy and equipment as well. He is an engineer by education whereas KOSKALENKO and VARENTSOV are not. PYRSKIY had been the Commander of Artillery in a military mission in ROSTOV the North Caucasian Military District. He was also the Commander of Artillery of an Army then he was made the Deputy to VARENTSOV. In this way VARENTSOV was strongly supported by PYRSKIY because he is an engineer. PYRSKIY does have many personal deficiencies, however, and VARENTSOV does not get along with him well. They do not have close personal relations. He does his work very well but as an individual he is always intriguing, he wants to be a Marshal of Artillery and he is jealous of VARENTSOV because he considers VARENTSOV to be a fool in technical matters. He is merely a strong administrator. VARENTSOV can operate massed artillery units effectively but from the viewpoint of technology, PYRSKIY is far above that.

44. G.: Is this base on NOVAYA ZEMLYA the most recent one?

S.: It's construction has been going on a long time. Some time ago I mentioned the North Regions to you but at that time I did not know exactly where.

G.: How about the other bases such as NORILSK, VORKUTA and Franz-Josef Land?

S.: They were also being prepared for a long time. I know that NORILSK and VORKUTA were closed to foreigners. I know this because a

/Canadian...

Canadian delegation came to MOSCOW on an exchange basis with delegations visiting the far north, in order to determine construction techniques in very cold climates. They wanted to go to VORKUTA but were refused permission. There is even an article by OBINTSOV in which the extensive work by numerous engineer forces in the far north are described. All kinds of underground shelters and fortifications have been constructed in the far north, particularly in the area of VORKUTA. All this underground work is done because of its extreme cold temperature and I am sure that there are many other bases in the far north. I will find out the locations of all the sites that I can but in the meantime you should expect that there are many more there. The principle to keep in mind is that they are building as many dispersed bases as possible avoiding large concentrations. These areas are being extensively prepared as launching sites for nuclear strikes. On the other hand from the defensive viewpoint thanks to dispersion and the isolated nature of the country, little damage to installations and personnel would result from enemy attacks.

45. G.: Now, with respect to armies, when you said that there are only two Soviet armies within the D.D.R., who told you this?

S.: FEDOROV told me this at the time that he came to MOSCOW en route for training his battalion at KAPUSTIN YaR. BUZINOV went there also and he is visiting FEDOROV now and when he returns he will tell me all about it.

G.: Before you stated that there were two tank armies there.

S.: No. That is a misunderstanding; I did not say that there were two tank armies there in their entirety. It is the same concept as when I said there are ten armies deployed in the general direction of the D.D.R. These are echeloned throughout the entire territories adjacent to and reaching far back from the D.D.R. They are part of the over-all Front commanded by Marshal KONEV. Some forces even lie in the U.S.S.R. territory. The tank armies and other armies are also echeloned back. Their main elements may be in the D.D.R. There are lots of tanks concentrated in the D.D.R. and when I said that there were two

/armies....

armies within the territory and now a third one is being moved in, this means that their combat elements may be there but their rear services may be far back in Poland or in the Baltic area. To determine this exactly we would need a map laying out the entire order of battle. But in order to estimate the strength of the forces opposing us in this theatre, which are under KONEV, we must consider that he had nine armies in his command and now he has ten with the addition of the Eighth Mechanized Army.

46. G.: In other words only portions of the armies are actually in the D.D.R.?

S.: Of course, and FEDOROV told me that the local population was not pleased to see large Soviet troop units in their territory. For estimating purposes we should consider that there have been two Soviet armies in the D.D.R. and now the third has been brought in. It is entirely possible that D.D.R. divisions may be attached to these armies.

47. G.: Now with respect to this battalion which is the experimental anti-missile battalion, where is this battalion actually located?

S.: The Institute itself is in MOSCOW and I believe it is in the area of Dolgovskiy-Streshnevo but I will find out the exact location later. The battalion, however, is located at a testing site, but which one I do not know. It is not in the MOSCOW area, maybe it is in KAPUSTIN YaR.

48. G.: Here is a question regarding your item No. 14. Who told you about this?

S.: The fact that KHRUSHCHEV said that there can be no exclusively local war is general conversation in the entire General Staff. I cannot single anyone out, everyone speaks of this.

49. G.: And who told you about the delay in the demobilisation of 400,000 men?

S.: This is known exactly to BUZINOV. He said this twice to me.

G.: Why is he in a position to know this?

S.: Because VARENTSOV also has an organisational-mobilisation otdel and they know the total personnel strength with respect to

/artillery....

6

artillery troops and then someone must have told BUZINOV what portion of the artillery troops are involved with respect to the whole of the demobilisation delay of troops.

Another pause took place for the tape to be changed.

50. S.: Nowadays the KGB has again raised its head. One must again be careful of what is said. This is another of KHRUSHCHEV's strong control policies; after all, just look at the stature of the heads that rolled. And he is both the author and the initiator of all the trouble that the whole world is now so anxious about.

51. G.: Regarding the items about closing the BERLIN border, who told you about this and what were the circumstances?

S.: At VARENTSOV's house I was invited together with POZOVNYY and we sat around a table just as we are sitting here together with our wives. And POZOVNYY said "Don't talk about this, but we have prepared to shut the borders in BERLIN at six o'clock in the morning on the 13th August." Later BUZINOV told me the same thing. I was almost tempted to call up and tell you about this in open text or to put it in the dead-drop.

52. G.: You mentioned that in KREMENCHUG there is this brigade with battalions of R-11s and R-12s.

S.: Yes, and if you show me my graduating class photograph I will spot the deputy commander, Lieut. Col. BONDARENKO.

G.: Of what use, are the R-11 battalions in KREMENCHUG?

S.: That is only a rear area, they train there but if the brigade is needed it may even be transferred to Germany; this is only a home station, a garrison, and there is a training school there. It is simply a brigade and I do not know its number and it is a second echelon unit which is in the process of training, it may be even transferred to the Far East, to face Japan.

G.: That is very clear.

53. G.: Now, please tell us the proper title and the official position of the other persons who were at VARENTSOV's party. Let us take Gen. Polk. FOMIN, Gen. Polk. SAMSONOV and Professor RYABCHIKOV.

/S.: ....

S.: I understand, let us first take Gen. Polk. SAMSONOV. He is the former chief of staff of Artillery under VARENTSOV, just as KARIOFILLI is now. The Chief of Staff of GUKART (Glavnoye Upravleniye Komanduyeshchego Artillerii) of the Ground Forces. Don't mix this organisation up with GAU now called GRAU, GUKART is the official designation of VARENTSOV's command. Today SAMSONOV is the Chief of a Faculty (Kathedra) of the VOROSHILOV Academy which has just recently been amalgamated with the Frunze Academy. He is the author of many artillery studies; he has written many articles and he participates in reviewing artillery manuals. He is an outstanding artillery theoretician. VARENTSOV made a special toast to him. He is a small bald man.

54. S.: Now Gen. Polk. FOMIN of Artillery. He is rather ill these days. He is also an excellent artillery theoretician. His present duty - he is in this Council reviewing inventions, the Chief NII of GRAU, which supervises the work of other NIIs. At one time he too, like SAMSONOV now, was Chief of a Faculty in the VOROSHILOV Academy, now in the FRUNZE Academy. At one time he was also a prominent artillery commander during the war. He is a very close friend of Rodion Yakovlevich MALINOVSKY because at one time they both served together in CHITA. Their families are also well acquainted and their two wives were also constantly yapping at the table at which they sat together.

55. S.: Now, Gen. Polk. KARIOFILLI. He is very ill and he wishes to retire. I just remembered, the deputy to KARIOFILLI is Gen. Lieut. VOSKRESSENSKIY, who also met VARENTSOV at the LENINGRAD Railroad Station, greeted him and immediately flew off together with BUZINOV to the D.D.R. on an inspection trip. He is a small thin man. If he didn't have to go he would probably have been invited to the party because VARENTSOV has high hopes and reliance on VOSKRESSENSKIY and hopes that one day he will be his Chief of Staff.

56. S.: Now as to Professor RYABCHIKOV. He is about sixty years of age and a very prominent chemist, a professor and a doctor of chemical sciences and he works on bacteriological weapons. When he made his toast he said "I know Sergei Sergeievich not as well as the others

./present, ...

9

present, since I met him only at KARLSBAD and I have listened to everything said about him by those who have known him for decades and though I have only known him for several months I subscribe fully to what has been said about his being a great man, but in addition he is a most amiable person and thanks to his kindness and friendship I am a guest amongst you here." Although the professor was not drinking too much he did let it slip that for some time now he had been working on the preparation of certain artillery charges for the Generals present. MALINOVSKY frowned a bit when this was said since the man obviously referred to bacteriological charges for artillery and rockets. He said specifically "Sergei Sergeievich, I also load the items that you launch and fire." I already told you about this SEMENOV who was a former Deputy to VARENTSOV and who is now retired.

57. G.: Explain more about the GUKART.

S.: First of all under this Directorate all artillery schools and academies for ground forces are under VARENTSOV through this directorate. Previously Gen. Lieut. KUPIYEV was the Chief of the Upravleniye, but he has been retired. Now the Chief is Colonel LEBEDEV, who is the Chief of Military Training in GUKART. There is an intelligence section under Colonel ZAIKO. They have an organisation planning section which works as an organisational mobilisation section and also as a material supply section. There is a technical section, and there is an artillery material section. There is also an editorial section which formerly published the Artillery Journal which is no longer being published, but they have other publications to be concerned with.

G.: And undoubtedly they have a personnel section.

S.: Yes, of course, and they have an administrative office.

G.: How about an ammunition supply section?

S.: No, they would not have this, that would be under GRAU.

58. S.: What other questions do you have?

G.: Just a moment and I will get out the questions we have for

/you....

you to clarify based on your report to us on the 22nd August, which you passed through WYNNE. Harold will you hand me the questionnaire on this subject, as well as his original notes so that he can refer to them. You certainly remember your first report of 22nd August on the BERLIN situation. Now, although events are moving fast and the situation has changed, please clarify the following..

S.: On basic matters nothing has changed; the tension still remains and I added when I arrived the day before yesterday that the problem of Iran will be linked to that of BERLIN.

59. Q.: To what degree do satellite leaders know and accept KHRUSHCHEV's plan? and also include what the Chinese attitude is.

S.: Let us consider the Chinese separately and the other satellites on the other hand. I was not able to produce the exact letter of MAO TSE TUNG of the differences in views with KHRUSHCHEV, the letter has already been officially destroyed. With respect to all satellites except China they most completely agree with KHRUSHCHEV. They agree with every peep of KHRUSHCHEV's; just look at Hungary. FERENC and others said something different on their own foot and everything went straight into the hands of KADAR. Anyone who says the slightest thing different from what KHRUSHCHEV decides or states is immediately removed. Even GOMULKA who at one time attempted to run an independent course of sorts has now calmed down. All of these leaders execute KHRUSHCHEV's wishes, they even make the same type of aggressive speeches to impress KHRUSHCHEV. The Chinese apparently independent of the Soviet Union still want to stand in the forefront of the Communist movement. MAO TSE TUNG and his entire clique, stated that after the death of STALIN the influence of the Central Committee of the Communist Party of the U.S.S.R. has become weaker. But the time is still too soon for the Chinese to seize the position of the vanguard of the Communist movement, even though the population is three times that of the combined other Communist countries. From the viewpoint of numbers, and maturity in the Party sense as well as strength and correct thinking they

/consider....

consider themselves higher, more intelligent and more correct in their course than that of KHRUSHCHEV. Of course the Chinese will not do anything negative since there is a flood of gold, machinery and all other support going to China from us all the time, and they will not disturb the international position of Communism. Certainly not as openly as TITO has done. Therefore KHRUSHCHEV maintains a liberal attitude towards China and MAO TSE TUNG maintains a liberal attitude toward the U.S.S.R. They don't want to sharpen their differences. There are many fundamental differences between them that they have spoken about and these remain differences of opinion as before. Right now very little is said about China; judging from the reports in the papers one could assume that China does not exist. However, whenever there is a Congress or any other international problem is discussed, there is at least always a so-called "observer" there from China. He always supports and approves of what has been said and obviously China is closer to us than any non-Communist country. I mean by this the so-called vascillating countries. Therefore, despite everything else China must be considered to be a first rate friend and a reliable helper of the U.S.S.R. in any situation or difficulty. If a difficult situation develops, China will not insist on its own demands but will support the common cause of Communism. To what degree and on what scale is another matter; this is a problem which deserves thinking about . But the contradictions are not as critical as it may seem, each country is going along its own course and each one thinks that it is a right course. But China must always be considered as the supporter of the Soviet Union particularly in terms of military support and in that sense it should be considered as any other satellite of the U.S.S,R. China is not Jugoslavia. Jugoslavia is really under our control although it is vascillating considerably. However, there is a great deal in common in the policy of TITO and MAO TSE TUNG.

60. G.: From whom did you find out about KHRUSHCHEV's statements which

* ? S.: were quoted as what he would say at a high level conference. This

/information....

information was told by KORENEVSKIY to ZASORIN. KORENEVSKIY has very strong contacts in the Central Committee of the Communist Party. And it was stated to him that if the Western leaders go to a conference with KHRUSHCHEV about the German problem, KHRUSHCHEV will take his own position on the German problem. And let us look at this from a viewpoint of actuality. What else that is new, can KHRUSHCHEV state concerning the German problem? All he can say is "Very well I agree not to sign a peace treaty for another year" and this he does not want to do. But so far as the justification of his position and his views on the German problem, there is nothing more that he can add - he has said everything about it. Therefore, he will take the position that if a Conference on the German problem comes about but the conversations will also involve other matters, then he will discuss everything together. But if our leaders meet with him to discuss only the German problem to avoid a possible war over it and if Messrs. KENNEDY, MACMILLAN and De GAULLE state that they are willing to accept a certain flexibility concerning the German problem, on certain matters and will accept some points and not others, this would be a precedent for further consideration. And therefore they would ask KHRUSHCHEV to make certain suggestions and delay the signing of his peace treaty until everything was resolved, that is where KHRUSHCHEV would get up and leave the conference and say "I have nothing more to discuss." And this would be a complete repetition of PARIS where Mr. EISENHOWER met with KHRUSHCHEV. This came from the Central Committee to KORENEVSKIY, who is a very big man and is the Chief of the Information Directorate of GRU.

61. G.: Please explain this contradiction, KHRUSHCHEV's present belligerent attitude is completely opposite from the position that he fought so hard to attain at the 21st Party Conference. Can you explain and with referencing, what brought this about? I refer to KHRUSHCHEV's own contradictory words.

S.: I understand you perfectly. Everything is dialectically interwoven. Even DARWIN was a dialectician. When KHRUSHCHEV was

/speaking....

speaking about something entirely different to what he is saying now, in fact he was setting specific time dates when he would sign the German Peace Treaty and then denounced them, it is like swinging a club and then seeing that the reaction is not in his favour, so he stops swinging. At that time there were no military forces capable of supporting the policy he now advocates. Now he is sitting on a military horse and although he is not fully equipped to the maximum he is beginning to talk in a different way. Why has he kept quiet for so many years and now he is speaking loudly. He estimates that there are weaknesses in our western countries and he also considers that we are not fully prepared. He also knows some of our potential strengths in detail through his Communist agents particularly and will continue to know this unless we strangle these Communists and he feels that he has strength and can act this way and he feels that KENNEDY, MACMILLAN and De GAULLE must take him into account. Now that we are showing him firmness he is ill at ease, but he still hopes that we will swallow the second pill. What you refer to as a contradiction is actually a dialectic deviation and as military strength increases he wishes to use this means to gain a political victory in the German problem. And now if we falter he will win both a moral victory and additional time for himself. However, if KHRUSHCHEV is struck at with force he may recoil and think about it for a year or a year and a half. Of course he will arm during this period, as will we, and then this will be really a war of nerves. I repeat again that any concession to KHRUSHCHEV based on pure reason and humanitarian considerations will be regarded by KHRUSHCHEV as a weakness on our part. And incidentally all this stems from the problem that you involved yourselves in, in1956 in Egypt. In fact now that you still tolerate CASTRO in Cuba, he considers it an accomplishment on his part. You see the contradiction is this, whereas we use complete reason and humanitarian thinking in our approach to him, he translates this as an indication of weakness.

62. G.: Were these high level command changes made in connection

/with....

with the German situation, or were these changes which were planned earlier?

S.: This is again an example of KHRUSHCHEV's tactics, namely of wielding a stick. He had sent KONEV out, actually he had sacked KONEV just like he had SOKOLOVSKY, but when he needs them he calls them out again appealing to their Communist Party affiliation and to do what they should for the Party and Country. SOKOLOVSKY has already agreed to work for KHRUSHCHEV, but ZHUKOV as yet has not, but there are rumours that he will and the KONEV situation is a repetition of the same story as when ROKOSSOVSKY went down south to the Caucasian district. This is nothing but propaganda and I am sure that ZHUKOV will also agree to serve, we must await this.

63. G.: Does KHRUSHCHEV actually rely on the satellite armies in case of war?

S.: He is completely confident in the political nuclei of the political leaders in the satellite countries. He is sure of this and KADAR is as much a stooge of his as a Secretary of an Obkom.

G.: How about the troops?

S.: He is sure of a certain percentage of the troops but he does not trust them as a whole. That is why he relies so heavily on nuclear weapons. In short, if they want to live and eat to survive they had better support KHRUSHCHEV. This is why he states that any local conflict will develop into an atomic war. It is absurd and indicates absolute aggressiveness. And he is trying to frighten people by this, both ours and his own.

64. G.: Can you explain clearly exactly what is meant by a mechanised army?

S.: I have probably not clarified this sufficiently before. The word "mechanised" means everything on wheels, that means there are no foot soldiers and no horses, they have eaten all the horses. In addition all of these mechanical transports have been given more fire power such as tanks and self-propelled artillery. All other artillery is either

/transported...

transported in a mounted form or is towed. As much as possible of the wheeled and tracked equipment is armoured, even personnel carriers have steel plate protection. All infantry rides on one form of equipment or another. A mechanised army may have varying composition; it may have four, five or six divisions, but all of them would be mechanised divisions, insofar as the infantry component is concerned. There can be variable numbers of tank divisions and mechanised divisions in the mechanised army. There is no set pattern.

65. G.: What is your concept of what is often referred to in your manuals as a Field Army and how does this differ from a Combined Arms Army (obshchevoiskovaya)?

S.: They are the same. Take for example the Sub-Carpathian Military District. Four armies were stationed there. Now, with the redeployment of the Eighth Mechanised Army there will be three. Two of these are Field Armies and one is an Air Army. When they speak of a Field Army they want to stress that it is primarily an infantry army, but different from a Mechanised Army. However, it is exactly the same as a Combined Arms Army - a Field Army can have varying numbers of rifle divisions depending on the mission assigned to the army and all kinds of other arms may be attached as needed.

G.: Would the divisions be motor-rifle divisions?

S.: No, the rifle divisions here would be foot soldiers.

G.: Therefore, the concept of a Combined Arms Army would mean that the rifle divisions you just spoke of have had engineer, tank and artillery units attached thereto and therefore the word "Combined Arms" is used.

S.: That is absolutely right.

66. G.: In case complications develop in connection with the German situation will Soviet Troops be sent into Roumania, Bulgaria and Czechoslovakia?

S.: Without question and they will assume the prime combat role in these countries. KHRUSHCHEV would never permit independent

/satellite....

satellite army action for political reasons. He will have Soviet troops in front of them and behind them.

67. G.: If the allies succeed in forcing access to BERLIN, could then KHRUSHCHEV start a general war?

S.: KHRUSHCHEV does not want a world war and would attempt to defeat the allies locally, but if he feels that he has sufficient strength to knock out the USA and England, who are the leaders of NATO, it is possible that he may strike first. Even though in the past our General Staff and our foreign policies had condemned the concept of surprise attack such as Hitler used, but now they have gone around to the viewpoint that there is a great advantage to the side that makes a sudden massive attack first and they are preparing themselves to be in position to do so. Since he cannot muster enough strength to strike at all potential enemy countries simultaneously he is singling out the U.S. and Britain as his attack targets estimating that the other allies would disintegrate due to differences amongst themselves and be happy to be alive. The conclusion we can draw from this is that if he does not retreat from his wild proposals and impossible conditions we should strike him first, otherwise he may strike us.

63. G.: What are the present views of particular high-ranking officers regarding Soviet policy on Germany? and the role of Soviet forces? Do they agree or encourage KHRUSHCHEV?

S.: A Minister such as MALINOVSKIY agrees with KHRUSHCHEV completely, although to himself he may say that it may be too early to embark on such a risk. No-one can openly oppose KHRUSHCHEV, they would be simply removed. Each one is afraid of losing the benefits he has thanks to his high position. Do you think CHURAYEV wants to lose his estates with his twelve thousand roses? They would rather see everything go up in flames and go up themselves with it than say anything in opposition now and be removed.

69. G.: Who gave you the information that you reported regarding

/TITOV's....

3

TITOV's flight?

S.: These are the rumours going round all over the country, but no prominent person has told me anything about TITOV. The rumours going around are that TITOV only went around once, just like GAGARIN. The scientists, however, who have made these elaborate preparations also run tests secretly and to some degree they have had success. KHRUSHCHEV likes to bring forth military men as a screen. There are two versions of these rumours; one version is that TITOV made the same type of a vertical flight as the American did; the other version is that TITOV only circled the world once. I tried to bring this up but VARENTSOV says nothing, even though he must know the facts. BUZINOV does not know anything either because these things were done with great secrecy and the launchings were made from MOSKALENKO's bases. Possibly MOSKALENKO has nothing to do with cosmic flights, but unquestionably his bases were used for this. The Soviet people think that this was propaganda and although they understand that such feats are possible they do not believe it has been yet achieved. Of course, a flight once around can be exploited for delivering an attack against us.

70. G.: If, as you suggested, one rumour stated that a scientist went around a number of times in another vehicle, instead of TITOV, that in itself would be an accomplishment, so why would KHRUSHCHEV not announce it?

S.: The devil knows why. Maybe it is because he is so set on presenting military men. There is much that is unclear about this and although these are nothing but rumours, I felt it my duty to report this to you.

G.: In other words these are no more than low level rumours.

S.: That's right, but if everything had been so well perfected as KHRUSHCHEV alleges, then why did he not invite westerners, even KENNEDY, but at least news correspondents to witness the launching and results of these flights?

71. H.: I'd like to come back to one of the questions, since there is a slight difference here between what he said before and what he says now and I would like to know exactly how he got it. When he wrote us before he said that KHRUSHCHEV was going to do something about Turkey and Iran /in September....

in September or October. He now says it is going to be in conjunction with BERLIN. I'd like to get this story absolutely straight and clear. Who first told him about Iran and Turkey which was after he left us in LONDON? What was said at that time and when was the position changed?

S.: I understand. The politics of the Central Committee and the Party is centralised and they can embark on any alternate routes and perform any metamorphosis in an opposite direction. First of all it is important to know that such a policy existed against Iran and continues to do this. This is what I reported to you. At that time they were planning to solve this problem in an isolated fashion and they only mentioned to me the month of September at that time. Then, I was told that it could also happen in October and I told you that after the Party Congress they would sign a Peace Treaty with Germany. Now I am clarifying this and am saying that this problem will be resolved simultaneously with the German problem. After the end of the war when our troops entered Iran they were not badly received by the local population and our troops even helped the peasants harvest their crops. Our intelligence reports that the entry of Soviet Troops now would not be badly received by the local population. KHRUSHCHEV contemplated giving an ultimatum similar to the one he gave a short time ago to Turkey and to Pakistan that if any more U.2 flights were sent from their airfields those airfields would be attacked. The ultimatum to Iran would state that if American bases were not removed from Iran, Soviet troops would move in. Obviously no-one would remove anything and if he moved in his troops then war would begin. That was one line of action, but they began to think more deeply about this. Possibly a conflict resulting from this would not work out well since there are also U.S. bases in Turkey and Pakistan; therefore it would be better to delay this for a month until October and in the meantime build up preparations. In the meantime the course of the extensive manoeuvres would be checked and troops deployed advantageously and since the Party Congress is meeting on 17th October, this problem can be handled simultaneously

/with....

with the German problem. A third possibility is that only the German question will be considered and our troops can be concentrated in the direction of Iran but would not go in. The important thing is to be prepared for any eventuality and to adopt that course of action which would be the most expedient politically, but of course all courses of action must be developed for possible use. Therefore this does not mean if they plan such a move for September that they would necessarily have to follow through. Preparations are going on intensively in the Caucasus in terms of troop training and preparations for possible military action. The island of ARTEMA has been closed. I had to report to you that preparations for this action in September were being made but one cannot tell when KHRUSHCHEV may decide that another course of action is more advantageous.

72. H.: I understand all that and it is perfectly clear, but I would like to know who told you exactly about the plans for Iran in the first instance.

S.: It was ZASORIN who is the Chief of the Napravleniye against Iran and now he has been visited by the Resident from Iran PANTELEIMONOV. As soon as I return I will speak with him again and find out what has taken place. He is the one who told me September or October and then added that it probably would be in October together with the German problem.

73. H.: At the time that you wrote this you also said that they were considering to send CHUIKOV down there, but since then that has been changed. How was CHUIKOV connected with the Iran problem?

S.: At the time that KHRUSHCHEV sent KONEV off he wanted to place Marshals in every border military district. Therefore he was considering CHUIKOV together with a whole group of Marshals for an assignment, since then he has decided to make him the Chief of Civil Defence instead but it does not mean that CHUIKOV may not be again the Commander of Ground Forces which is being rumoured. All these moves are tentative considerations, but I assure you that if hostilities break out there will be a Marshal in every border military district.

/H.: ....

H.: What I am trying to get at is whether the timing of the change in the assignment of CHUIKOV had anything to do with the change in the plans for action against Iran.

S.: That is entirely possible, it could have been, but I do not know for sure. You must realise that the Central Committee is deciding in case of war which Marshals to send to what border military district, because in case of war these districts will become fronts. There will be a front in the theatre of military action and a Marshal commands a front. Today even though Marshals are not actually present there that does not mean that preparation is not going on and possibly they have been already designated but have not gone there. When hostilities begin they will appear because the troops morale and prestige of a front is enhanced by the presence of a prominent Marshal who is a proven military leader.

74. G.: When did KHRUSHCHEV make this statement about chopping down the tree and then the branches will fall off themselves?

S.: He said this in the Kremlin during a reception. I don't know which one, he has them all the time but it was about the time that I wrote about it. You have no doubt heard from a Western ambassador about the incident when KHRUSHCHEV was drunk at a Reception and was speaking about a megaton bomb and although his people were trying to correct him he was mixing up TNT equivalents with actual weight. I think it must have been the French Ambassador.

75. G.: Since KHRUSHCHEV must be well aware of Western military superiority over Soviet armament, how can he be so arrogant?

S.: You see he feels that the West is not fully prepared and there are many contradictions between the members of NATO. He feels that if the West werebetter organised then it would be stronger but since there are contradictions in NATO it is possible that some of the nations would pull out of it and therefore it is weak.

G.: Does he not recognise the West's superiority in armament?

S.: He recognises that there is armament strength, but he feels that the contradictions in NATO are strong enough to justify his position and he anticipates winning because of this.

/76. ....

76. H.: I think it is time that we should be packing up to go - it is getting late. (Subject stood up and examined the artillery journals which he had photographed in order to spot the section on geodetic preparations for firing).

S.: By the way there will not be any more artillery journals published in 1961 the last issues are in 1960, from now on artillery articles will be placed in special sbornik, but I have put away for me in the Artillery Headquarters in a safe another journal which I have left there in order to photograph it when I return. The new artillery articles will be placed in the sbornik of the Voyennaya Mysl but it is possible that an entire issue can be devoted to artillery articles.

77. (Subject reviewed his mission assignments and again requested our help in introducing him to a French businessman. With respect to October meetings with Janet in MOSCOW the entire month was cancelled because Subject planned to go on leave immediately on his return and in addition not only would the time element be too short in October for his accumulating any material or photography immediately after leaving us but since he himself had stressed that the KGB activity during October and up to 15 November would be exceptionally heavy it would be wise to avoid contacts with Janet during this period.)

S.: However, we must arrange meetings for November. (Subject was told that it would be possible for him to meet again with Janet here in PARIS and at that time the meeting plans for the future would be worked out.)

S.: As long as I am in the Committee meeting arrangements with Janet at Receptions are fine but we must keep in mind that if I am transferred back to GRU then we must establish a system for future communications which would be exclusively on a clandestine basis. In addition to that we must work out a method for me to pass on urgent information to you, that is for that kind of data that you must have within twenty-four hours.

G.: We will work all this out prior to your departure.

/78. ....

78. The next meeting was set for Monday the 25th September at 19.30 hours but Subject would be given instructions to meet at a different RV point through WYNNE. Subject was told that prior to WYNNE's departure it would be well to take advantage of WYNNE and his car to make a short trip around PARIS. Subject agreed. Subject was shown a transcript of his first meeting and he was impressed by the amount of work it takes to record the meetings with him. He was told that we have to do this in order to report to our Governments what he has said as accurately as we can. In connection with the official meeting with WYNNE that Subject contemplated, he requested that WYNNE would bring him some material, something like technical brochures, he was shown some very fine French business firms brochures and he was quite pleased with some of these which he would select later as having notionally acquired through WYNNE or a French businessman. Subject's documents which were taken out by Roger to be photographed were now returned to him. Subject left at 24.00 hours and was delivered by car to the vicinity of his hotel, but a few blocks away by M.G. and J. There was no incident involved.

---oooOooo---

MEETING NO. 33 - 25th [illegible], 1941.

1. Subject was picked up by M. and G. at the new HY point without incident and arrived at the safe apartment at 1955 hours. Subject expressed his displeasure about the current headlines which predicted some sort of appointment but he was reassured when told that these were newspaper speculations since HITLER had not yet made his speech.

2. S: I have a few notes here and first of all let me mention a question which you brought up last time. With respect to the possible appointment of CHUIKOV as Commander of the forces facing Iran, I want to remind you that the appointment of KONEV was made only three days before he went off. This was not announced in the press at first, but I believe that he left on the 10th August, prior to the closing of the border. Therefore we must keep in mind that preparations for an activity may be going on and may be planned long before a particular individual is designated as the Commander. In addition there may be a number of candidates and decisions may be altered favouring one or the other at any time. Our job is to keep in close contact so that I can report to you all possible variations and we must be prepared to accept any one of the possible variations.

3. Here is something you can check up on since it is within your province. We can check on [illegible] although I believe him completely, we can check to see if the number of employees allowed by the French is actually the number which he reported to me as being in that cable which came while he was Duty Officer. Both [illegible] can be easily checked to confirm the creditability of an unwitting source like [illegible] in whom I personally have great confidence. And again I repeat that if I ever reported to you that some man was to be given an appointment and later another man received it, this does not mean that the first report was incorrect. This is life, there are changes.

4. M: The whole point on this question is that the information that he gives us is of such great importance that before we make our reports we would not be doing our work properly if we did not examine the problem together with him from all sides. We must make sure that we have got the facts right and that there is no possibility of error. What he produces in documentary

form /

APPROVED FOR RELEASE
31 MAR 1992

form is 100% but when we are dealing with a human being or a series of human beings there is always a possibility of increasing the margin of error and of misunderstandings. And this we want to eliminate to the maximum of our ability because of the importance of what he is saying. (G. translates).

S.: I understand this and it is very important that we are reviewing all these points which are not clear and in addition you are orienting me and teaching me to examine more critically my obtaining the information with respect to my own understanding. I can see where many fine points are important and even in this numerical value given by ZASORIN your checking could indicate in case there was an error that though ZASORIN may be honest with me, possibly he is careless, with respect to accuracy. H.: In this case there are a number of other possibilities as well. It may be that everything that ZASORIN told you he did properly, but there is a possibility that the information which ZASORIN received was in itself not correct.

5. This is a very important conversation because we have a number of questions which we wish to put to . . this evening and he will see as they develop that they will cover precisely this type of ground. S.: That's fine. Let me finish this point. I reported to you that the Resident PANTELEIMONOV was called to headquarters from Iran and it is possible that the Chief of the General Staff may even receive him since he could be concerned with strategic intelligence matters. But at present I don't know whether he will receive him or not, but I will find out before I go back. However, in the press there are already articles criticizing the fact that this took place only a short while after I reported about Iran to you. Therefore we know that some plans and preparations are being made but how the plan of action may vary and be activated in one month or another one cannot tell. The point is we should be aware that such preparations are going on. I have already told you about discussions that the Iranian people would receive Soviet troops well because in the past Soviet troops have assisted the Iranian peasants.

6. 5. May I now bring up the subject of WIKE, that is the last item that I have and then I will be ready for your questions. The last two days I was at the Exhibition and then I looked around in the town a bit from the viewpoint of clandestine operations, thus far I have not noticed any surveillance against me whatsoever. Certainly not Soviet. So far as the French are concerned, maybe they are watching me, but I have not noticed it at all. Last night I was at the Exhibition and I [illegible] hours

[illegible]

1300 hours. Shortly after I left, at 1500 hours, a stairway broke injuring seven people, of whom one was hospitalised. Today I noticed that this section was shut off and closed. Yesterday was a day of Franco-Soviet friendship and they wanted to have a lot of pomp and ceremony, but the French Government would not permit this. The ceremony was very brief and consisted of just a few short speeches. The Soviet Ambassador was there, the Director of the Exhibition and the Chairman of the Franco-Soviet Friendship Society. The place was fairly crowded, however, because it was a Sunday and the weather was very fine.

7. The day after tomorrow will complete my first week in my visit here and by now having oriented myself I must work on my missions and you must help me execute them. In this connection I would like you to instruct YYYYY as to how he should act in the future. I will present my plan and my views and you please change it and improve it as you see fit. It seems to me that as of tomorrow the time is ripe for YYYYY to have arrived in PARIS overtly. On Wednesday, the day after tomorrow, he should visit the Exhibition at about 1100 hours. The Exhibition opens at 1000 hours. He should go to the Exhibition Administration and ask the Director or Deputy Director if they know whether any member of the Committee for Co-ordination of Science and Technology of the U.S.S.R. is present. He should say that a month ago he was in MOSCOW at the Committee and he was told at receptions at the Committee that either Mr. XXXXXXXX or Mr. (two more) would be going to the Exhibition in France. He should add that he is well acquainted with people in the Committee and he is a scientific-technical journalist since he handles delegations which go to the U.S.S.R. and receives delegations which go to England. "I'd like to meet with someone because I am now planning my Exhibition in MOSCOW in 1962. Is there anyone here ?" They will tell him that I am here and when he asks how to reach me they will only locate me at the Exhibition or call the Embassy. Therefore Wednesday I will visit YYYYY officially. Then I will report to the Resident that our good friend and contact of the Committee has arrived for a few days. Mr. BELOV and I will mention his favourable background and the fact that he has brought me something. The Resident will probably offer me operational funds to entertain YYYYY. YYYYY should bring

me /

me a few items that he had promised to get from England. And later he can hand me some of the materials that you have already shown me, saying that he picked these up for me in France. I'll look them over later and divide them into two sections, so that some of them will be in English and some in French. I can easily say that he travels extensively and has contacts everywhere even here in France, since the firms he represents do business here also. It is now the right time for WYNNE to be more active and there are branch offices of at least two of his English firms here in France. This is most plausible and logical and it will be of great advantage to me particularly in the eyes of the Rezidentura here when they see that I am doing something. Another request I have is that when WYNNE meets me officially he should change his car. I shouldn't be seen in that car again because he went everywhere in it. Therefore he should get another car when he meets me officially. That is my suggestion and request.

8. Another thing, I did not get my receipt yet from the hotel where I stayed four days, I don't care if it is for the full sum, I can balance it off, but now he has got me a room for 22 francs. He went to the other extreme. So he is saving me money which I have to return to the Soviet Government, and will probably call me a fool for not spending what I was allotted. He should ask that I have a better room there so that the difference wouldn't be so great. Then I have to have a list of some of the people from here who have visited the French Exhibition in MOSCOW. I could pretend that I met some person here.

9. (a.) From this there are quite a number of problems. First of all he must face up to the fact that perchance he may have already have been seen with WYNNE. And if we pretend that WYNNE has just come and we go through all these motions at the Exhibition, we might do, by mischance, more harm than good. (G. translates). S.: He doesn't have to say when he arrived, but he'll pretend that he has just met me, but it would not be right for me to report that I had met him earlier. Who do you think could have seen WYNNE, someone in the Soviet Embassy? G.: Exactly. H.: For example, I came here under another identity and have gone nowhere, but yet the other day an American who knows me asked Joseph if I were not here. S.: Well, I don't know for sure,

but /

but I don't think anyone has seen WYNNE, maybe he avoided the Soviet Embassy. I will meet him at the Exhibition. Very few embassy people go there.

H.: It's all right to meet at the Exhibition, but WYNNE shouldn't ask for him. They should meet there by chance and then he can introduce him to the Director and say "this is my good friend". In that case we are not telling a lie, we are not saying anything at all and we are not saying that they have met before. S.: Fine, let's do it that way, it sounds very good. By the way, if somebody did see me with WYNNE, how does he know that that is WYNNE ?

H.: And it is perfectly logical to say that WYNNE is only passing through PARIS to see the Exhibition and he is on his way to handle his business commitments in BELGRADE. And, if for any reason they want to check up they will see that he has in fact gone to BELGRADE and the whole thing ties up. Secondly, if we play it this way it would be unusual for WYNNE who doesn't know where his friend is to go trotting through PARIS carrying brochures. He will tackle getting the brochures to him in another way but not at this meeting.

G.: All he needs to say is "I didn't expect to see you here for sure, but I brought something for you and I have left it in my quarters", or my office, or wherever they would normally be and WYNNE could then give you the things at the following meeting.

10. S.: That is clear, now I have another question, while passing through PARIS to go to BELGRADE, could WYNNE not be engaged in making business contacts here in PARIS ? H.: No, because this is out of WYNNE's territory. His representation with his firms is exclusively for their trade with Eastern Europe; they have other representatives here for their trade in Western Europe, and this has nothing whatsoever to do with him. (G. translates).

H.: But we are working on the problem of introducing somebody to him through WYNNE who is a representative here and who works, we hope, in the same general sphere, and who, thanks to this trade representation here, could logically meet WYNNE and who could be introduced by WYNNE to our friend. S.: That is very good. Was that man at the French Exhibition in MOSCOW ? G.: The whole point is that WYNNE would have normal business reasons to know this man and when you report on a man's background, having been introduced to him, to the Resident it is likely that this man will be of interest to the Resident, which is the purpose of the whole exercise. S.: Would it be inconvenient at the

time /

time than [illegible] does to [illegible] to have his [illegible]
This is to remove prominent identifying features as much as possible in
case someone saw him before - it's a red moustache. G.: Now that would
make things more complicated later.

H.: Now we are trying to establish this and pass over the contacts as quickly as possible because WYNNE absolutely must go to [illegible] or else he will lose the representation of his firms and he will not be able to go to MOSCOW. S.: Yes, yes, that's right, he will be thrown out, and he is very much afraid of this. H.: Therefore we cannot keep him here until the end of the Fair and our present plan is to keep him here only so long that we can effect the contact. S.: And also materials. H.: Of course, but once he has the contact, the materials will follow after the [illegible] said that I would have something from WYNNE. H.: Of course, it comes to the same thing. WYNNE will give it to you and he can say that partially the brochures come from the new contact. S.: Does the man speak English? H.: Of course he is an American. S.: That's fine, I don't care if he is an Irishman as long as he can speak English. H.: The other brochures WYNNE can say he merely picked up while travelling and some of them came from France. G.: Let us get on with the timing for this. H.: Yes, while we are working on this plan we have not yet made the contact we are hoping for, but we hope to do it quickly. G.: Even tomorrow, for as short as a half hour meeting, we can pick you up in the car and go to the woods to give you full instructions as to where, and when and what to say if we are fortunate enough to have all things in our hands by that time to give to you. We plan to do this tomorrow. H.: The most important thing, so that this thing will move quickly, is for WYNNE to go to the Exhibition tomorrow, but he must be available all afternoon for us to reach him if we need him to introduce him to this other fellow. G.: Since the man will be unwitting, we must lay on a careful plan and to save time WYNNE must meet you officially at the Exhibition as early as possible tomorrow and then have the afternoon off in case we need him. We hope during this time to have WYNNE meet the man and they will find a mutual [illegible] and engage in a business connection to establish an acquaintanceship. Later you will contact WYNNE and he will tell you when and where to pick you up so that we can brief you on the next step.

12. S.: Fine. Tomorrow morning I will go to the Embassy and see if there are any cables for me, as I always do, just to check if any delegations are coming, and then I will go to the Exhibition where I will be at 1000 hours. You will of course instruct WYNNE that he should go there too. Of course, he will not bring me anything then, but will give me brochures the day after. You can speak to him in the morning before he goes and tell him what to do. G.: When WYNNE gets there don't keep him long, say one and a half to two hours, and then let him go because we may need him for our contact arrangements and WYNNE will not be able to tell you when we want to pick you up at that time. Therefore after releasing WYNNE you call him at 1800 hours and he will give you instructions then. S.: I can simply go to his hotel at 1800 hours and he can tell me everything. G.: That's fine, you do that. S.: Everything is clear and very good. As a safety check when WYNNE drops into my old hotel for five minutes to pick up my shirt, he can ask there if anyone enquired about me. The Embassy already knows that I am staying at this new hotel.

13. Another thing we will have to be working on is my itinerary beginning with October 5 or 6 after the Exhibition closes. G.: We have that in mind also. Now, let us know what did CHEREDEYEV suggest to you regarding places you should visit ? S.: He suggested that I visit electronic and chemical plants anywhere in France. G.: Did he not name any factories or towns ? S.: No. Because how can he do this when he doesn't know if I have a possibility of visiting there or have any contact there ? H.: What is the purpose of this trip ? Is it to visit factories or is it to photograph military installations as you did in England ? S.: The purpose is to visit the factory, but as soon as my itinerary is established then on advice from CHEREDEYEV as well as my MOSCOW briefing I would look at military targets located along my itinerary route. If I worked up a group of contacts based on let us say those I met in MOSCOW and those I developed here, I would check out this list of plants to visit with CHEREDEYEV and he would indicate the priority interest and from that my itinerary would be established. H.: Therefore we have got to find somebody who can arrange visits to factories. And that is not so easy. S.: How about this man that you want to get me

into /

into contact with ? Can he not arrange for us to take a trip somewhere ?
G.: We don't know at this point yet, but we may find out in a day or two.
S.: Very well we won't go any further into this now, I think I have reported everything to you on my part. There is nothing new to report from the Embassy, especially since they close at 1200 hours on Saturday and are closed all day Sunday. At the Exhibition I have not made any new acquaintances with the exception of having again spoken to the Secretary of the Franco-Soviet Friendship Society. If I can make a contact through him I will report it to you at once. So right now, up to the closing of the Exhibition we will develop piece by piece all contacts that we can and then we will see what I can do for the remaining ten days after the closing of the Exhibition. G.: Have you exactly established a date that you must leave ? S.: I am authorised twenty-five days and I will either fly out or go by train on Sunday the 15th October. If I go out by train or not will depend on whether our Consular Section have arranged transit visas for me to go through Belgium and West Germany. G.: Have you submitted requests for these visas already ? S.: Yes, our Consular Section know about this and they said that they would do it for me.

14. (The plan for the next day was again mentioned). S.: I suggest that the best time would be for WIRTH to come to the Exhibition at 1430 hours and walk in the vicinity of the automobile display. I will meet him there. H.: Let's have a short pause and then we can go on with our questions. S.: Do you have photographs of the Soviets for the Embassy here ? H.: Yes, we will show them to you later.

15. S.: By the way did I do right by photographing the personnel file of KLOSSE, the scientist who defected in Canada ? Was this of any interest to you ? G.: Yes, but there were the consequences of this affair to either you or the Committee and were any particular security measures involved ? S.: To me there was nothing at all. As a matter of fact the Committee didn't suffer either but they felt very uncomfortable. All the Committee did was to obtain his passport for him, since as we are designated as a co-ordinating committee, all passportisation passes through us; we have an otdel for this. For example if the Academy of Sciences processes their individuals for a delegation, they do all the inside work and all we do is to then submit to the Consul request for a passport at the Council of Ministers of the USSR. It is usually done

/ [illegible]

through our cadet indoctrination course. There was a tremendous upheaval in the Academy of Sciences, a number of people were discharged - it was later discovered that at one time KLOCHKO was under action for dismissal from the Party allegedly for having a personal argument with someone in which he was accused of enmity. However, this action was dropped as unsubstantiated. The way I became involved in this was that Gen. Lieut. KOGOV called me, since GEROV was in Poland at the time, and asked me to get whatever files the Committee had on this man. KHRUSHCHEV and the Central Committee even ordered he have the man assassinated. The Academy of Sciences submitted all their files on him to the KGB, which took whatever action was necessary but I was sent to our Personnel Section of the Committee and told them that GRU headquarters was interested to know what we had on this man since we processed his passport application forms and they simply handed it to me. They made a Xerox copy of the file and I had it all day so I had a chance to photograph it.

15. There was a tremendous upheaval since he was the author of some seventy works, a member of the Communist Party since 1939, he was the holder of a Stalin prize and was 59 years of age and he has knowledge of some three hundred thermo atomic/nuclear chemistry in his head. When the balance of the delegation returned they were questioned by KHRUSHCHEV and Aprelov and they told us all the details of how he smuggled out of his hotel and Mr. Luber at the Conference when he announced that he would not go back, what was said. The Counsellor of the Embassy was there and one of the members of the delegation who was a KGB man was there. Therefore although it was most painful, for our Committee the real upheaval and blame was on the Academy of Sciences. TIME came the day after I photographed this, so I handed it to him. He told me that he had read it in the press already and that another Soviet engineer had defected. His name was also Ukrainian, SENKOV and he defected in Austria. His father asked him to go home but the son refused and went on to West Germany. Can you imagine the upheaval at the Academy of Sciences with two in a row defecting ? KLOCHKO was working seventeen or nineteen years at the Academy of Sciences and was the Director of a laboratory; it will go hard for his son but he had already left his wife with whom he had lived for seventeen years. One of the workers in the Council Committee involved when the exit permits was dismissed and there were received reprimands along the Party line for inadequate check

and/

and for letting a man of this age who does not have [illegible]
(insufficient hostages), with no family, go abroad.

17. Q.: What would have happened to you had you handled this [illegible]
S.: If I had been the chief of the Canadian Section and had actually done the processing myself for this man, which in this case was done by the Academy of Sciences, I would have been thrown out of the Committee and received a reprimand along the Party line at the very least. All our comrades did to affix a stamp so to speak - they only asked for the passport. If one of the men in my delegation which I first came to England headed it, in view of the fact that I had personally processed them, I would have [illegible] people are happy that many on this list of possible delegation members are not going to come. I am sure that no more than fifteen or twenty will come. Up thus far there was no advice by cable, maybe tomorrow there will be. The exit commission is being very careful and strict now. To some extent it has even affected my trip now, since they demanded a new personnel report on me. It was a military [illegible] report [illegible] to see if anything new of a derogatory nature had been added since they last examined my earlier personnel file in March.

18. Q.: Didn't you say that the KGB was going to go after this man KROCHKO? S.: Yes, when they first found out about this, the Central Committee ordered the KGB to dig up all material on him and there was an order to find him and assassinate him. I found this out in all because we were also helping in getting documents about him. The first day after he defected he stayed in the basement of a Canadian police station. Q.: Is the order to assassinate him now in effect? S.: Yes. And this man must be protected. There are other situations like this - a man was assassinated in Austria another in Turkey. This case is a serious loss to the Academy of Sciences and to the Soviet Government, because this man knew many secrets. At the Conference he said to the Soviets, "Do not agitate me, [illegible] they bring him his suitcase or he wouldn't talk, and this was done. The Counsellor told him Mr. KROCHKO, as the situation no matter [illegible] your mistake, but in two hours it will be a crime, and [illegible]

and he answered "I am sick and tired of this propaganda and agitation and if you continue I will stop talking to you and leave". Then he explained that he had stayed in the basement of the police station the day before and gave as his reason for defecting that all his life he has tried to do something good and useful and he was always persecuted and bullied and he had decided to defect a long time ago. He said "I have done this now and I will dedicate the balance of my life to developing those ideas which I still have in my head and even if I don't succeed in finishing everything, other specialists will carry on". That's all there was to it and he told them to go to hell. The Conference lasted one and a half hours. H.: This is absolutely word for word what we know about this talk as reported from CIA officially. S.: I repeat that you should protect this man and call to your attention that when the code clerk defected some years ago in Canada (illegible), when they found looking for him in his room they were going to kill him. I believe they tried to kill him even later. S.: Yes, and they may be still trying to do it and this man also needs protection. That's all I have to report on this, if you're ready, let me answer your questions.

19. Q.: Sergei Sergeievich as you have told us travels constantly. He has made several trips away from MOSCOW in the last month or so. It would be of value to reconstruct his traveling in so far as you can. On 15th September he returned from LENINGRAD. Where else did he go to during the preceding month? S.: Here is how it is. Sergei Sergeievich is constantly making air flights. Q.: What kind of aircraft? S.: All my aircraft and the Ministry of Defence has a squadron of military aircraft available. All one needs to do is to call the Duty Officer, but in case all of these planes are engaged he can simply fly on a TU and the ticket is purchased at the expense of the Ministry of Defence. Q.: What type of military planes are these? S.: They are all Ilyushins. However he came back from his party conference at LENINGRAD by train. Then my daughter stays with them at the dacha and either I or my wife call her she has often mentioned that suddenly that day Sergei Sergeievich has flown off somewhere. He begins the day very often without knowing that he will be flying off somewhere during that day.

20. Q.: And where was he ? S.: He was often in Germany, he was at KAPUSTIN YaR during the tests; he was also in SVERDLOVSK, but that was much earlier and he was down south in the Trans-Caucasian Military District and this was a separate trip from the one to KAPUSTIN YaR. He goes to Germany quite often, I even reported that to you last April, so when they called him to go to LENINGRAD for the Party Conference, where he was elected unanimously, of ocurse he also had his own official work to do there as well, just like MALINOVSKIY who flew off to LVOV on the 17th September, also had military inspections and conferences to attend.

21. Q.: Tell me when Marshals such as MALINOVSKIY and Sergei Sergeievich are elected delegates at a Party Conference to the Party Congress or Supreme Soviet, are they elected only by the military population of an area such as a republic or an Okrug, or by a certain number of persons both civilian and military ? S.: No, it's like this. The dictators of the Central Committee compute it this way. Suppose there are two million one hundred thousand Communists in the Soviet Army. They would then decide that let us say, two hundred delegates to the Party Congress representing this group should be sent there. Of these twelve Marshals should be sent, say fifty Generals, so many officers, so many non-commissioned officers and so many privates. They are playing the game of democracy and this is supposed to cover the representation of everyone and these candidates for election as delegates are distributed by the various rayon Communist Parties and some Marshals have their own Party cells and there may be a Communist Party unit of some size in a Group of Forces. In short wherever it is possible by size to hold a Party Conference from such a conference only one delegate to the Party Congress be sent. These are elected by secret ballot, but the Central Committee proposes the candidate even though he doesn't live there. VERETSOV, for example, was proposed at LENINGRAD, not only because there are already many candidates to be voted on in the MOSCOW area but VERETSOV is known in LENINGRAD and has his home there. The members of this Party conference are both civilian and military who met there because they were sent by the lower Party units of that district, both military and civilian.

22. /

22. G.: Possibly, MALINOVSKY lived in LVOV at one time. S.: Possibly, but that is not essential. The Minister of Defence is known throughout the land and he could be elected a candidate from any district. This is all a play at democratic procedure only. Of course, usually, when they suggest who should be elected it is better for the local Party Conference to know the individual, but sometimes at the Conference a letter is read which states that the Central Committee suggests that a certain candidate be considered for election. They may simply say "Three delegates should be sent from you. the Director of a prominent factory, some milkmaid and we offer also VARENTSOV for your consideration." Everyone applauds and votes that way. The whole process is sheer stupidity and even at the Party Congress the big people may come for one day to attend the opening and the introductory speeches and then go off and not attend another session.

23. G.: Then you mention that Sergei Sergeievich visited SVERDLOVSK, do you know what kind of plants he visited ? S.: He told me that he inspected factories which were producing military equipment. We know that there are rocket factories there and these were what he was inspecting. He did not specify what assemblies or types he was looking at but merely said "rocket production". He also visited factories in CHKIL. G.: And are there many factories in that city or in that oblast. S.: Yes, there are. J.: When did he go there ? S.: Let me see - he was there prior to the time that he was at KHRUSTEN YAR and it was prior to his German trip. I believe it was in July 1961. He also goes to LENINGRAD often since his leadesy is there and his grandchildren live there too. He goes to LENINGRAD by boat, plane and train, but for greater distances he only flies and I remember that he returned from SVERDLOVSK by air on a Sunday because we visited him that day. G.: How long was he in SVERDLOVSK ? S.: He was there for about a week.

24. G.: Did you know when he went to KHRUSTEN YAR ? S.: I know that when BUZHKOV told me he was already there. H.: What were the exact dates ? S.: I can't remember, but I will now start writing down dates since I see that it has a significance for you. G.: Yes, it is very important. That should not be a difficult thing to do. How long was he in KHRUSTEN YAR ? S.: He was there three or four days, not longer. Then the new tests using nuclear warheads with rocket delivery were being run. I will take note of this in the future because I can find out when he is going from his writings of

another time /

conversations between the families. G.: Did he go there by ...

S.: Yes, he did.

25. G.: On what occasion did he tell you of the atomic ... K-12? S.: After his return from there he told me that the K-12 ... tested with an atomic warhead and RUZHOV told me that it ... adopted, that it is in serial production, he gave me its ... the atomic warhead and the other data I passed to you. He also mentioned that it was being tested at KAPUSTIN YAR. H.: We would just like to pinpoint the time a little more. We have VARENTSOV coming back from ... the 15th September and earlier than that he was possibly three or four days in KAPUSTIN YAR. Can he work back from September 15th and say that VARENTSOV was in LENINGRAD a day or two before that, can he recollect the time. S.: I understand. He was in LENINGRAD at the Party Conference for a short time, he flew there by plane and prior to that he was in KAPUSTIN YAR. Incidentally a plane flies from MOSCOW to LENINGRAD in one hour five minutes, but the trains are almost all night trains from either end, so one could sleep on the train and arrive at one's destination in the morning. For example he arrived in MOSCOW at about 0900 hours. I am sure he was in KAPUSTIN YAR only three days, not more, but I did not jot down the dates. H.: Did your friend see him on the dates after his return from KAPUSTIN YAR and before he went to LENINGRAD ? S.: I believe I have seen him twice, once before he went to KAPUSTIN YAR and once again before he went to LENINGRAD for a short time when I went to his headquarters with the ... RUZHOV told me the details after VARENTSOV returned from KAPUSTIN YAR. RUZHOV is often called by phone to bring some papers or documents to VARENTSOV after VARENTSOV is at his destination and on several occasions he sent RUZHOV two or three days beforehand to prepare certain things for him. H.: I would like to cover one more point before we go on to the next question. He told us that this test that VARENTSOV went to see took place on the 8th September. Did VARENTSOV tell him that it was on the 8th, or how else did he know it was on the 8th ? S.: I told you the day had the possibility of a seven hour difference to American time and in addition VARENTSOV was in KAPUSTIN YAR several times, but we are discussing only the last time. H.: But did he in fact tell you that date as the 8th ? S.: Specifically, that date

by /

by BUZUNOV. G.: Is it possible that BUZUNOV could have made an error of one or two days? S.: On two, no, but on one day he could have made a mistake. He told me something like yesterday and if that day had been the 9th instead of assumed yesterday to be the 8th - possibly I misheard and he could have said the day before yesterday, then it would be off by one day.

26. G.: Let me explain something to you. As you may well imagine, we have all kinds of technical devices that can determine with accuracy the fact that a nuclear detonation has taken place. S.: I understand this perfectly. G.: And on that specific day, the 8th September, there was no nuclear detonation at either KAPUSTIN YAR or at NOVAYA ZEMLYA, but there were incident detonations near that day, both after it and prior to it. S.: Yes, there could have been a misunderstanding on the date, I could have misheard "yesterday" for "the day before yesterday" and when I came here on the 26th I was thinking about this and was also confused by the difference between your time and ours. G.: The difference is only seven hours to MOSCOW and it could be a few more hours spread between MOSCOW time and KAPUSTIN YAR time. S.: In addition the time given could have been the launching time and not the detonation time, perhaps the exact time they did not want to state.

27. G.: Did by any chance VASILTSOV refer to the rocket by its NATO designation or did he simply call it the R-12? S.: No designations whatsoever were given - they were simply [illegible] R-12 and R-14.

28. G.: You will record the dates accurately from now on? S.: I certainly will and at that time what seemed the most important to me was the fact that there was a nuclear detonation and the value of the yield was given as well as information on the range of the rocket. [illegible] thing for us on dates is that when we receive a nuclear detonation [illegible] date and subsequent to that he informs us of a specific yield of the warhead, then we can compute additional data from that. (G. translates and explains further that by associating the recorded and computed electronic oscillographs on a specific nuclear detonation and knowing what yield that detonation was would permit other recordings to be computed and in fact this would establish a scale of values). S.: I understand this perfectly and first of all I realise that your equipment cannot make an error, but I can mix up

the /

the day that I was so impressed by the fact that the first time since I have been working together I was able to learn of an actual detonated nuclear yield that the date exactitude did not strike me as such a significant factor, but now what we must do is to analyse the whole time period involved. G.: Let me give you another example. Hypothetically, suppose there had been a detonation on the 6th September and on the 10th September, we would have recorded readings on both detonations which could be of different yields. Therefore when you report that one had taken place on the 8th it is of the greatest significance to us to learn if the error applies to the detonation on the 6th or to the one on the 10th. S.: I understand this too and in the future I will certainly be careful. With respect to the detonation at NOVAYA ZEMLYA I did not give you any date for that but just the time period during which this took place. G.: And we know that you were correct because we have a reading that a nuclear detonation did take place in that area during that time period.

29. S.: Please always check me, I am trying to report as honestly and factually as I can to you and I wish you would check to see if the 250 planes ZASORIN told me about were in fact that number. G.: Since you have brought up this topic I have a group of questions here that we may as well cover now and then return to the original sequence. The first one said that the information about the three U.S. missile bases in Iran is entirely false. After all, we ought to know what we have there. S.: That is good that you can check this and maybe the GRU made a mistake here and have given wrong information to our General Staff, maybe they reported only three bases in Iran directed against the southern Urals and in fact there are thirty-three there; that would be in our favour. BUZINOV has three bases indicated on his situation map and possibly they are contemplated bases and he has them indicated incorrectly. G.: It is clear in this case that the GRU has made a very bad mistake. Could it be possible that intelligence has misled KHRUSHCHEV into over confidence. S.: No, I reject this possibility. KHRUSHCHEV has at his beck and call all reports for every country with complete order of battle data, if they consider that there are three nuclear missile bases there and you say that this is an error, so much the better for us; let them believe this misinformation.

30. C.: And in a similar vein, when you reported about the Ninth Armies and how you [illegible] in the German direction, that is about fifty divisions, however, within the D.D.R. (illegible) irrespective of how the Armies are deployed, there are about twenty Soviet divisions in the territory of the D.D.R. That is a large number and however we distribute them numerically between armies it would certainly be a larger number than two armies, and I do not count the third army being brought in, the Eighth Mechanised Army. S.: In my report I listed two armies in the D.D.R. and now I am listing the third one, the Eighth Mechanised Army, which is being moved to the D.D.R. You should consider that at least five divisions would be in an Army and possibly you are considering some of the divisions in an Air Army. And possibly you are considering some D.D.R. troops which are also in division formations. C.: No I mean only Soviet divisions and Ground Forces not Air. S.: I reported to you that in an Army there would be a minimum of five divisions, so maybe these contain seven or eight divisions each. Therefore multiplying seven by three you would get twenty divisions or more. In addition, remember this, that there are many divisions which are independent and not included into armies. These would be General Headquarters Reserve divisions. There could be two or three of these. I think it would be absurd that my informant could have made such a mistake. I told you altogether that there are nine armies, and now a tenth has been added, but that is in the German direction.

31. H.: Who said that there were exactly nine armies in the front with KONEV commands originally. S.: There are three sources who said this, they are: General POZDNYYY, who named this specific figure, and this was confirmed by BUZUNOV who often goes to the D.D.R. I have also talked about this to ZAGORIN who is a nepravleniye chief and he has this information through the GRU channels. I can't understand where an error could be made there. Maybe you consider armies which had been previously stationed in the D.D.R. and now only certain advance headquarters exist, or possibly the new regiments armed with the V-75 rocket can be grouped into a larger unit with centralised control which would be a division and this would increase your estimate of divisions there.

32.

32. G. According to our order of battle map, and I do not make A mistake in this because you don't hide an Army headquarters, I show that there are five field armies in the territory of the D.D.R. plus in addition an Air Army. S. This is impossible, this is a mistake. Let us look at this further, it is very well known that very large numbers of Soviet troops have been brought into the territory of the D.D.R. and it is very difficult to deploy them. There are insufficient garrison areas and military towns to house so many troops and they cannot be all kept under open skies. It is a tremendous engineering effort to build so many structures to house personnel, cover vital equipment, provide the necessary camouflage, etc. etc. for protection against weather and cold for such a huge force and never was such a density of Soviet troops in Germany mentioned to me. You told me that we have a sufficient number of troops in the D.D.R. to handle NATO and now they have reinforced it still further. We know that they have now ten armies in the German direction and maybe your calculation for the large number of armies in the D.D.R. extend the real boundaries to a point beyond the D.D.R. to include five armies. But that would not be the D.D.R. even if an Army in the first echelon was just beyond the border of the D.D.R. but in a position to give close support, that would still not make them within the D..... and you may include these in your total. In addition they don't have enough airfields for such a huge number of aircraft that would have to be there in an Air Army. I reject the possibility of such a fantastic concentration within the D.D.R. and believe that there is an error in this calculation, you must include units beyond the border.

33. (A brief pause was made to change reels). S. I'd like to add another comment or two on this last question. First of all, of course it is possible to make an error and I will study this matter more closely when I get back, but I doubt very much that they would make a mistake in terms of armies. They could make a mistake of a division or so, by counting such that they should be knowledgeable of this and I do not understand how they could make a mistake in the number of armies. Looking at it from the viewpoint of military science in the event of outbreak of hostilities, such a concentration would be brought into the area. But now everything is being supported in great depth

and /

all on the Polish-Soviet border and a total of [illegible] have been assigned to this napravlenie which are involved in the German problem. Possibly inaccurate intelligence in terms of understanding military matters have included the additional armies even though they are outside the D.D.R. boundary but still close. I will, of course, look deeper into this situation. In addition with respect to the air armies of which the total is two, they must be necessarily deployed at great depth since they would want to avoid being placed at vulnerable aerodromes immediately adjacent to the West German border. They would be in the supporting echelons and they also include bomber aviation as well as fighting craft.

34. Q.: Do you remember when you were describing the anti-ballistic missile programme, what did each one of your informants say about this, for example, why do you suggest that the Institute is in the Gorkovsk area? A.: There is a large military training base in the area. I know that there are studies in electronic technology there. I was stationed there for a long time and went to the academy for four years in that area. BUZINOV stated that there is this Institute in that area, so it is not just opinion. There are large yellow buildings, and a large wall around them, that do military technicians work there, not only civilians. All the employees there are under strict security regulations not to speak of that they do. There is only one such institute and it has a testing battalion, but of course this battalion is not in GORKOVSKIY but in one of the testing sites. KOZLOVSKIY also told me this and he lives in that area. Q.: Was additional information [illegible] did one source give about this compared to the other? A.: He (KOZLOVSKIY) has been riding around that area and fishing in the river for years and he meets all kinds of high-ranking generals and they speak about these things.

35. Q.: Since we were just speaking about BUZINOV, you identified him before yesterday that he is the deputy chief of an otdel and in addition he is an aide de camp to Marshal VASILYEV. A.: I'll explain this reference, he is an A.D.C. to the Marshal for missions of special importance when [illegible] was reducing the size of the army structure to economy measures

the /

the position of aide de camp for missions of special importance was eliminated from the Tables of Organisations. All VARENTSOV had left of his personal staff was his Adjutant and two civilian chauffeurs. He had no one to fulfil this important function requiring responsibility. And previously he had FEDOROV who was replaced by BUZINOV. So VARENTSOV had to do one of two things, either discharge BUZINOV or assign him to another duty slot but still have him do his important work as A.D.C. In the future, should VARENTSOV become the Commander of the Combined Rocket Forces then the Tables of Organisation provide him with an Adjutant-General, which position BUZINOV hopes to receive should this take place. Q.: What is the otdel of which he is a deputy?

S.: This otdel is a part of GUKART, it is called the Technical Otdel which controls the adoption of new material. It is a part of the Armament and not part of the Headquarters Staff which has its operations section, intelligence section, etc. It is an Otdel of the Commander of Artillery's Directorate. BUZINOV only visits the Otdel for two hours a day and some days he is not even there, he is primarily occupied with executing VARENTSOV's affairs. He gets 2,300 roubles for his duty status and if he were merely a senior officer he would only get 2000. The Commander of the otdel may be unhappy because BUZINOV is only there on paper, but he doesn't dare say anything because VARENTSOV will fire him. The point is that BUZINOV has the pass in all the Otdels of GUKART and he has a propusk called a Vezdekhod, which permits him access everywhere.

36. Q.: Who told you that Marshal CHUYKOV was going to be the Chief of Civil Defence? S.: He already is in this position. Sergei Sergeievich told me this and as I reported to you before, they don't like each other, so Sergei Sergeievich said to me "They made this jerk CHUYKOV Chief of Civil Defence, but who knows, he may come back as Chief of Ground Forces yet". They very wisely considered General KRYLOV, the Commander of MOSCOW Military District for this post, but he himself refused it. Maybe he is afraid to accept this responsibility and he is in a good spot now as Commander of the Military District of the capital, and he will always move ahead into a hi position. ZHUKOV was also proposed as a candidate for this post and even GOLIKOV, the Chief of the Political Directorate was considered for the position as Chief of Ground Forces. These are all possibilities but I do

there so you even if we can't predict who is going to have this position.
GOLIKOV was made General of the Soviet Union and he is definitely hopeless,
he is just a stooge of KHRUSHCHEV who supported him during the ousting of
ZHUKOV.

37. G.: In connection with civil defence, you remember there was an organisation called DOSAAF Dobrol'nyye Obshchestvo Sodeystviya Armii, Aviatsii i Flotu (Voluntary Society for Assistance to the Army, Air Force and Navy). S.: Yes there was. G.: Does it still exist? S.: All of these semi-civilian organisations for civilian defence of local installations and areas in the rear, some were under the navy, some were under the air force, some under Ground forces, you remember them, the DOSAAF, the DOSARM and other (DOSO) of these have been absorbed into the Civil Defence Command, now it is a more concrete basis. There is a headquarters and staff and it is well organised under the Ministry of Defence. I will send you the full seventeen pages of this material which I will photograph. This spells out all chains of command and responsibilities and who will do what in case the decree period is announced, and this of course could be announced by KHRUSHCHEV and the Committee at any necessary time. And this is all financed out of the budget of the Ministry of Defence and all of the chiefs of military districts are tied into this plan for action when necessary and co-ordinated with it. All of these headquarters in military districts as well as the Commanders of military districts will report to the Minister of Defence and to KHRUSHCHEV on the status of civil defence. Before do you remember the Osoviakhim was handled through the Rayon system only in a slipshod manner since they had neither much equipment or funds, but now the officers assigned to civil defence local headquarters are on the same status and pay scale as other regular army officers.

39. G.: Do you mean then that all of these old organisations have been scrapped and that this new civil defence command has replaced them? S.: But all of these others have been absorbed by the new ones and it is now much better organised and directed. G.: Therefore the DOSAAF will not be called that any more. S.: That's right and all of these functions will be taken over by this centralised and organised civil defence organisation. The creation of

this /

this command is a ruling step of the Soviet Government and you will see by reading the seventeen pages who is authorised to declare an 0blyy period and under what conditions. G.: Good Heavens! If there are seventeen pages about evacuation of ministries and plants which may have been given in the polozheniye which established the Command? S.: No. This only gives responsibilities for doing these things but the specifics of what military goes where and when and all other details are contained in a secret document for each responsible organisation and is a part of the overall mobilisation plan. The government placed sufficient significance on the creation of this command by placing a Marshal at its head, and the Marshal, I forgot to mention earlier, retains his status as Deputy to the Minister of Defence. At the same time they had contemplated sending CHUIKOV down, as Commander of the forces there. And the never a Marshal is sent to such a large Military District it is because in case of war this will become a front. At the same time it would fit in with [illegible]'s propaganda policy. You recall at one time ROKOSSOVSKY was sent down there to command troops facing Iran and Turkey and another variation of this was then KONEV was selected to command the troops in the German direction. And CHUIKOV they had considered sending down there.

39. G.: Please explain what is the difference between a Party polozheniye and a postanovleniye ? What kind of documents are they ?

S.: A polozheniye is a document issued by the Central Committee of the Communist Party for an action which will be in effect for a long period of time. It is like a category about something in particular. A postanovleniye is for a specific action such as an action that would send me somewhere or to form a Committee. G.: Mr Blair Ruseell, it is an order, all right, but the Central Committee finds it indicate to use the word order, they use the word postanovleniye" (device). In fact it is an order in very large capital letters. By the way, did you criticise me for sending you the Central Committee letter on KHRUSHCHEV's report on Agriculture? Did it [illegible] worth-while ? G.: H.: and A.: Yes, that was fine, we were happy with it.

40. G.: Did you hear from anyone on the General Staff or anywhere else who may know, on exactly how many Soviet divisions are stationed in

Czechoslovakia, Roumania, Hungary or Bulgaria ? S.: No, I never [illegible] happened to mention this and I could not very well ask him a direct question since it would display unusual interest on my part. I even found out about the nine armies by listening, I didn't ask a direct question to learn this. The best source for this would be to have an acquaintance with an officer in the First Directorate who would know all about the organisation and dispositions of Soviet forces. Such a man would know about special organisation in armies with respect to the number of divisions in it, then there could be no confusion in estimating the number of armies in Germany by taking a total of twenty divisions and deducing therefrom that there are four or five field armies.

41. G.: Do you know if KONEV would also have the Soviet forces in these countries under his command ? S.: KONEV will have under his command all those armies designated for the German napravleniye no matter where they are deployed. Presently within the D.D.R. the army is under [illegible], but he is subordinate to KONEV and is his Deputy, thereby placing the Soviet troops in the D.D.R. also under KONEV who would command a Front in case of war.

G.: Therefore Soviet troops in countries like Bulgaria would not be under KONEV. S.: That is right, it is too far to the south and these troops would be part of a South Eastern Napravleniye.

42. G.: You reported that there were still two field armies and one air army in the Sub-Carpathian Military District. How do you know this ? S.: Many people told me this beginning with POCOVNYY who had told me [illegible] this very often and it is hard for me to keep it in memory. No one mentioned this, but a common expression used was "within the structure of the four armies in the Sub-Carpathian Military District". (this was prior to the redeployment of the Eighth Mechanised Army).

43. G.: Will you specify exactly the types of divisions which exist in the Soviet Army, for example the Motostrelkovaya, Mekhanizirovannaya, Tankovaya. What other types of division exist now ? S.: There are others, for example, the Airborne Division; then there is an organisation called an Engineer Army into which structure go engineer divisions. And of course

there /

there are 160 Divisions. That is about all there are now. How many
about cavalry divisions ? S.: No. These do not exist any longer. Only
a few cavalry regiments have been retained. They are used [illegible] parades
and for some guard duty.

44. G.: Have you run across any indications of Soviet activities in
other areas of the world besides Iran, such as Albania, Indonesia or to stir
up further trouble in South East Asia ? S.: In the Central Committee this
is constantly being studied. We have special committees dealing with
these countries and nspravleniye. They are particularly concerned with
countries which are divided such as Korea, Indo-China and even now Laos.
Within all these countries there are many representatives from the General
Staff and the Ministry of Defence. G.: Do you know of any specific actions
being contemplated ? S.: No. I do not. They are, however, keeping close
contact in all these countries, for example, IONCHENKO is sitting with HO CHI
MINH as an advisor on intelligence matters. And there are many others in the
General Staff there also.

45. G.: Have you heard any specific reaction of senior officers to the
following U.S. actions regarding BERLIN: increase in military strength by
calling up two new divisions in the U.S., reinforcing U.S. troops in Europe by
40,000 men and reinforcement of the BERLIN garrison ? S.: All these actions
you speak of we have heard of and they are fully known in the Soviet Union. This
served to disturb and create a nervous tension to a considerable degree. In
the tendency was to move up more of our own forces in that direction. G.: Did
anyone express the feeling that these actions might bring the situation close
to a conflict ? That is that there could be a war ? S.: The general
impression I had up to the very day of my departure was that the Soviet
officers felt that the U.S., England and France were determined to take a firm
position and would not step back from it, with respect to the Berlin problem.

46. G.: In this connection it would be very important to have your views
about this or any other possible change of U.S. policy on Germany from
discussions amongst Soviet officials in the Soviet Embassy here. S.: That
is perfectly clear and I will certainly study this matter. G.: And in
addition we want to know about all orders of special significance

may be required in connection with this matter, furthermore, I'm sure the Resident will tell you to what degree he has had success in fulfilling his missions to collect data on NATO plans, policies and thoughts relating to the Berlin situation. S.: Very well. I will clarify this point.

4.7. I'd like to mention another thought that occurred to me just prior to my arrival orders for a greater concentration of forces were issued. As soon as MOSKVITSOK demanded the six PVO regiments of V-75 rockets moved in and I am under the impression that KONEV has constant direct contact with MOSCOW and KHRUSHCHEV has full confidence in him and has given him adequate responsibility. It was probably at KONEV's request that a third mechanized army was allocated as well as those six regiments. Maybe it was a response to the cable advising of the redeployment of the 270 French planes. This cable was given to MALINOVSKIY at night and in the morning when I went to see him he already had an addendum with MALINOVSKIY's order to take action to be taken absolutely only after a Paris item is positively identified. ZASORIN was the duty officer who received the cable.

4.8. [redacted] the Military Council [redacted] Supreme Military Council meets on a scheduled basis, it is a frequent occurrence for them to meet at an unscheduled time. KONEV may be asked to come on a one day notice and to furnish a report on some particular matter, or merely to attend in person if matters other than rockets are to be discussed. It is an operational body in the hands of the Government which can meet whenever it is needed. In addition it is not obligatory to assemble a quorum which may include all the commanders of Combat Armies. Only the necessary commanders are assembled who are in a position to make a decision. It is a very flexible body. G.: How often do they meet ? S.: These days they meet very frequently. There are many occasions when MALINOVSKIY, the Minister of Defence, the Chief of Staff, several commanders of the Combat Armies concerned, ANDRIAN and KOZLOV meet together, and there is your

Military /

military Council. G.: I could [illegible] say, rather [illegible] last month [illegible] would be [illegible] be called out for a few hours or for a whole day. G.: [illegible] is that it would be of interest to know when VARENTSOV attended such military Council meetings in connection with his information [illegible] VARENTSOV as the source, so that we could possibly identify this information as coming from these meetings. S.: All I can say about this is that VARENTSOV is a very well informed man and when he [illegible] a statement regarding the current situation it may not be the result of decisions of yesterday's [illegible] Council meeting which he attended, but since he knows what has taken place before that it may be a summarized thought on his part. Therefore it is hard to separate out which information came from a decision of the Supreme Military Council, what came from VARENTSOV's discussions with his colleagues from other [illegible] and what came from a personal discussion between VARENTSOV and the Minister of Defence or the Chief of Staff.

49. G.: What is the precise name of this military council? Is it called the Verkhovnyy Voyennyy Sovet or is it called the Vyeshiy Voyennyy Sovet of the Ministry of Defence? S.: It is called the Vyeshiy Voyennyy Sovet. There is also a Verkhovnyy, that would refer to the Presidium. G.: I see. And who are the members of this Council? S.: Yes, of course.

50. G.: I have finished the agenda questions, but if you either have any items in mind which you would like reflected, please say so. Fine George, we have covered everything. G.: You see, questions of this type help to clarify and pinpoint your report. S.: Yes, and [illegible] for you elements of doubt. I suggest you send a cable to your [illegible] information [illegible] ask him to check his data.

51. G.: I can tell you that your data on U.S. [illegible] is wrong and possibly you will find out more about it if you return [illegible] I can tell you that the president from time to time [illegible] course, he only reports on matters of [illegible] and although he is responsible for reporting of the military [illegible] including all U.S. forces there, they probably would not [illegible] with accuracy [illegible] of the [illegible]

either. C:I But you say ZUBILOV has this data inscribed on his military Order of Battle maps. S:I Yes, and he gets his information through KGB channels. C:I If so he probably gets it from KORNIYEVSKIY and/or the Information Directorate, who certainly would be knowledgeable of all available facts. S:I Yes, you are correct, KORNIYEVSKIY would be very well informed on this, but that is how they estimate.

52. C:I Would you like to look at photographs now of the Soviets in France ? We have a tremendous amount of work to do to arrange our meeting tomorrow between YNNE and a man that we have spotted and then to meet with you and advise you as we have already planned so we will end this meeting with you examining the photographs. (Herold produced the sets of photographs for Soviets in France).

53. C:I I want to repeat to you for your clear understanding that if we do not succeed in making all arrangements tomorrow we will not pick you up tomorrow, but will tell YNNE by 1800 hours whether you will be picked up and at what time and where, either tomorrow or at a later date. I want you to know this so that you will not be disappointed and of course we will do our best to have all contacts worked out tomorrow. Therefore be prepared for either eventuality. S:I I understand completely. (Subject looks at the brochures which he will allegedly receive from YNNE and although subject requested more brochures from England it was explained to him that YNNE also collected brochures in French and other languages for subject in France. Approximately three or four brochures were in English and a fifth one was in Spanish and subject selected the ones which he desired from YNNE, all of which were explained to him as to the topics involved and these were placed in a separate file to be given to YNNE for passing to subject later.)

54. C:I What rumours have you heard expressed regarding [redacted] death ? S:I This occurred just shortly before my departure and nothing official has to be seen yet concerning this so I did not have a chance to get any information on this and here in PARIS I haven't heard a word about it.

55. By the way when will YNNE give me these brochures ? C:I The day after tomorrow, since tomorrow you will officially meet YNNE and introduce him to the Directors of the Exhibition. Of course, you can have it in the

evening /

evening from Paris, tomorrow night, provided this is after you have introduced him to the Directors as if you had just met him for the first time. That's fine, I'll drop by his hotel and pick them up later. Are you sure that you cannot find anyone to introduce me to who had been at the French Exposition in Moscow? And about this woman, would she not do? [illegible] ask a hypothetical question, suppose there were a Frenchman who had been at the exhibition and who dealt in one of your fields of interest and you had his name and you dealed him up on your own. Remember, this Frenchman would have no relation to us whatsoever. S.: If you give me such names I could certainly call them up as a member of the Committee who is visiting Paris. I would figure out how to approach him, that is, what to say, just so long as I had the lead. J.: Then suppose that this Frenchman that you had contacted would go to the French police and say "There is a Soviet who is interested in [illegible]. How would this affect you?" (C. translates and clarifies for subject). S.: I will have to think about this. C.: Remember, if we don't control this man or in fact know anything about him there is no way to know what any particular individual would do. S.: I will have to think about this. This is a very serious matter and a delicate problem. Now I am ready to look at the photographs, there is work to be done. H.: I'll get the photographs and I think the points we asked him about were covered very well. C.: I'd say two points were slightly over covered.

56. Subject began to examine the photographs and made identifications as follows: (In the list which follows the names in parenthesis are those given on the cards. Subject identified by name only those officers whose names are not in parenthesis).

No. 77 This is the Ambassador, Sergei Aleksandrovich [illegible]ADOV.

57. No. 69 This man is like a Kurier Okhrany (security courier). He sits where the pass section is near the entrance. Although I did not see him in the Residentura, such people are always KGB (Pavel Mikhaylovich [illegible]).

58. No. 62 A GRU officer - he is an engineer and a specialist and he attended the operational meeting at the Residentura (Nikolai Nikolaievich SOLDATKIN).

59. No. 53 He is a KGB officer (Vladimir Nikolayevich SAVCHENKO).

60. No. 52 He is a KGB officer (Aleksandr Ivanovich KOROTKEVICH).

61. No. 49 Here is the chief book-keeper of the embassy. He is the one who changed my dollars into francs (Mikhail Andreyevich FATKOV).

62. No. 40 He is a KGB officer. I see him there every day. (Levon - or Leon - Petrovich MAYILYAN).

63. No. 38 A KGB officer (Nikolai LYSENKO).

64. No. 36 Here is a GRU officer. He is the one who sent a first cable about my arrival and he was also present at the operational meeting. He is a large impressive man. His name is LEBEDEV (Lt. Col. (Air Force) Aleksei Ivanovich LEBEDEV).

65. No. 31 Here is the Counsellor for Science and Technology. He is Ivan Pavlovich ZUBRILIN, a Colonel and GRU officer and the Second Deputy to the Resident. He was also at the operational meeting.

66. No. 29 Here is another GRU officer who also participated at the operational meeting. I will tell you all those who were there. (Yuvenali Ivanovich KHOLEV).

67. No. 22 Here is a GRU officer (Viktor Nikolayevich ISAEV). He was not at the meeting.

68. No. 21 A GRU officer (Vadim Georgiyevich KIRSEV).

69. No. 19 Here is a GRU officer who was not at the op. meeting with me. He sat in an office in the corridor and he graduated from the M.D.A. with me. His name is Captain 2nd Rank Valentin Gerasimovich Grigoriyev. He is an assistant to the Naval Attache, PROKHOROV. He is married to this teacher who is older than he is.

70. No. 14 A GRU officer, but this photograph is very poor. He also was not at the meeting (Igor Vasil'yevich PIREV).

71. No. 12 Here is a KGB officer. He is the one who meets all the fleet (Nikita Artemovich ZAPLUZHNYY).

72. No. 7 Here is the Resident, Gen. Major Ivan Nikolaevich [illegible]

73. No. 142 Here is a GRU officer who is an engineer on electronics and he was at the meeting. I remember his last name, it is ZEMLYANSKIY (Vladimir Ivanovich).

74. No. 137 Here is a GRU officer who has been in France before. He is a Naval officer (Vladimir Mikhailovich SVARLOV).

75. No. 129 A GRU officer. (Sergei Sergeievich PAVLOV).

76. No. 117 This is a GRU officer (Yevgeniy Andreievich LISITSIN).

77. No. 116 Here is also a GRU officer (Vassily Ivanovich LEVITSKIY).

78. No. 114 A GRU officer (Yevgeniy Mikhailovich KUZKIN).

79. No. 102 Now here is a GRU officer (Vladimir Alekseyevich FEDOTOV).

80. No. 98 Here is a GRU officer who was present at the operational meeting (Aleksey Vasil'yevich [illegible]).

81. No. 68 ANAN'YEV Igor Aleksandrovich. I found him. He is a Colonel and the First Deputy to the Resident. H.: It says ANANIL on the card. S.: No. That is wrong, his name is ANAN'YEV, with a soft sign. He was also at the O.S. meeting.

82. S.: I do not see General SKOKOV. G.: That is because he probably only came recently and we did not have a chance to insert his picture yet.

S.: There are a lot of old pictures of GRU officers here and they have left France already.

83. No. 155 Here is a KGB Armenian (actually Georgian) (GULYA Nikolayevich KELADZE).

84. S.: Where is that stout assistant to the Military Attache; he graduated from the Academy with me, I don't see his picture. (There was no picture of this officer but on Wednesday September 27th subject verbally reported that this GRU officer was the Assistant Air Attache and that his name was Colonel LAZARCHUK).

85. No. 174 Here is a KGB officer. He has become much stouter since this picture was taken and I had dinner with him (NIL Ivanovich LENDEV).

86. Not 5 of Joe's list — Here is PROSKUROV (Vladimir) the Naval Attache, he was also at the Ops. meeting.

87. Not 6 of Joe's list — Here is a GRU officer, he was not at the meeting. (Aleksandr PORTAKHALOV). He had formerly been in Pakistan.

(This completed the examination of the pictures. The Diplomatic List was also examined, but since its date of issue was March 1961 Gen. Major SOKOLOV was not included, but instead it gave Gen. Major MASLOV as the Military Attache).

63. S.: Is there anything else we must cover tonight ? G.: No. We have finished with our questions and our pictures. S.: I have the building lay-outs of the Embassy and I'd like to spend five or ten minutes looking at it. We can spot the offices of GRU. (Subject said that on the second floor in one of the wings only GRU officers and the Referentura were located). (He showed on the plans where the entrances were, the staircase to the second floor, the Residentura room of CHERDENTSEV where the Ops. meetings were held and the few offices he had visited, including that of Gen. Major SOKOLOV. He pointed out that there was only one telephone in the common lobby of the Referentura and this was an internal Embassy phone. For outside calls, the GRU officer would be called out to where city phones were placed. In addition to the GRU offices, on the fourth floor where the Embassy Counsellors are located, those GRU officers who had official Embassy cover positions, such as KHOKHLOV also had their overt offices. (The second floor being one flight up).

89. G.: We don't want to start any other new work because you won't have time to finish it and it is better to do it afresh. S.: Did you get any results yet from the materials which I submitted and about which you may have some questions ? G.: We have not had time to work it over yet. That will take a considerable time. By the way I have a message for you from our chiefs. It says that the evaluation of the material you have obtained in the Artillery Journals is rated very highly and you are to be commended for your initiative and judgement in selecting the articles that you did. S.: There is another item on artillery which is in Russian here

and /

and is waiting for me. All of these articles including that one
DUBINOV signed out for personally. After all I don't have the right to go
into their files since I am not a member of that command.

90. G.: How are you getting along with your own purchases. We are
moving along gradually on the list that you gave us. S.: I have not done
much shopping yet, I just got a lot of little items when I went shopping
with [illegible].

91. J.: Tell me, do you have a dacha now ? S.: No, I didn't buy one,
neither did I rent one. G.: Was it because you had no time ? S.: Er,
yes, partially, but then you rather discouraged me from doing this also, but
I do have money. However, I didn't rent one. Before I leave me will
reconsider this matter again and you can advise me if I should have one or
not. I need a place to go to should I have to leave Moscow suddenly. The
only area I can think of now from which one can get out of the country is the
Baltic area, since things are shut tight in Germany now. At least that's
how I see it and that is better than dragging the family all the way to the
Far East to make a border crossing there. G.: How about the southern areas
like those facing Turkey and Iran. S.: The borders are very tightly
controlled there. G.: How about water exfiltration from the area of BATUM
on the Black Sea ? S.: That is a very good idea and I know that area
particularly from the Turkish side since I was involved in handling this
plane that crashed there; the Turkish village is only seven kilometres away
from BATUM. I have a good friend in that town that I visit whenever I am
there and I am as at home with him as with relatives. His brother was in
VATUTIN'S command and was killed during the war. We often sat at the
seashore where he has his own dacha and swam in the Black Sea and we could
see the border illuminated by both Turkish and Soviet projectors. Our border
guards parade along the shore-line often accompanied by dogs. The only way to
get out from there would be by a small boat straight out to sea and then be
picked up. The only other place that seems favourable to me is the Baltic
area where the people hate the Soviet regime and are waiting to be liberated.

One /

One could get out from there by boat. However your suggestion about BATUM is very good; it can be done from there. G.: Do Naval craft patrol the shore-line heavily ? S.: There are patrol boats there, but not many. Let me ask this question again. If I compromise myself, would I be accepted if I ran to a Western Embassy ? H.: They can't do anything for him because they can't get him out of the country. (Subject understood the difficulty and left shortly thereafter at about 2300 hours. Subject was delivered near the area of his hotel by R. and J. and arrived there without incident).

MEETING NO. 35 - 27th SEPTEMBER, 1961.

1. In following the plan as laid out in the previous meeting, No. 34, of the 26th September, for the day of September 27th, it had been arranged with subject to meet on September 28th by being picked up at RV point No. 1 at 2000 hours. In addition to debriefing subject on the events of September 27th and advising him regarding his future course of action, it was also planned to have an operational meeting together with subject and Janet to finalize MOSCOW contact arrangements for the balance of 1961. However, due to the unexpected requirement for Janet to be in LONDON by 1500 hours on 28th September, in order to execute this part of the operational plan it was decided to instruct subject through WYNNE to be picked up at 2100 hours at RV point No. 1 on the 27th September. This meeting also would have the advantage of checking more closely with subject the events of the very full day. Accordingly subject was so instructed and was picked up at RV Point No. 1 at 2100 hours by M. and G. with Roger checking for surveillance from another vehicle. Subject arrived at the safe apartment at 2125 hours.

2. G.: Our friend mentioned in the car that there are unpleasantnesses with WYNNE and he wants to give us a full report about it. (Roger was called in to listen to subject's version of the difficulties and G. translated for Roger points that were unclear.) S.: As soon as Roger is ready we will consider the WYNNE problem. WYNNE is waiting at his hotel now. (Subject stated that WYNNE's disposition is extremely bad and that he would attempt to portray his version of the facts and we could make our own conclusions and analysis. Subject said that WYNNE did not want to work with him or with us any longer because first of all WYNNE felt insecure with respect to his future and was always given a waiting answer so that he did not know where he stood. He added that he felt he was doing important work together with us but he insisted on having his future secured and unless it is so secured he would rather not continue to work with us and was planning to return to

London /

APPROVED FOR RELEASE
31 MAR 1992

LONDON the next day. WYNNE added that he wanted to acquaint him with certain facts even though he was forbidden by us to do so. Subject reminded WYNNE that he would report this to us because he must and WYNNE agreed. WYNNE was unhappy because his wife had been twice contacted by telephone in LONDON by someone who enquired when WYNNE would go to BELGRADE. This disturbed her and she in turn called her husband in PARIS and he was further disturbed because she was contacted and even that night while WYNNE and subject were having dinner, after subject had met HOCK, WYNNE called his wife again in LONDON. When subject asked WYNNE why he was so concerned about BELGRADE, WYNNE confessed to subject that nothing had been prepared properly for the BELGRADE trip with respect to the necessary appointments and business details for negotiations there on behalf of the English firms represented by WYNNE. WYNNE told him that he was prevented from making adequate preparations and arrangements due to the time required of him to spend on subject's behalf, but in subject's opinion this was entirely due to WYNNE's own fault in doing nothing in the free time he had when subject's interests did not require handling. Subject then stated that another basic reason for WYNNE's disgruntled feeling was that WYNNE was dissatisfied with the financial arrangements and when the figures and conditions were mentioned by subject, allegedly as reported to him by WYNNE, they were in complete error as Harold explained in detail. Either WYNNE did not tell subject the truth or subject garbled the facts or WYNNE himself was under a misapprehension or possibly WYNNE was cleverly laying the groundwork for additional future demands. WYNNE further stressed to subject that he was unclear as to his future because he had to spend so much time on the operation that he was gradually losing the confidence of the firms he represents which will drop off from him and that is why now he is unprepared to go to BELGRADE and plans to return to LONDON. In addition WYNNE complained that he would not receive a decoration about which he was told that the concept emanated from subject's imagination and subject confessed that he did infer this to WYNNE long ago in MOSCOW and WYNNE was further disgruntled allegedly because he could discuss nothing with subject even though they were closely bound together in work. Subject stated further

that /

that with such an attitude he did not need WYNNE to work with and added that since WYNNE had done everything for us that was required of him and was well paid for it and also performed his work in a commendable way as a patriot he should be released if he feels that way. But subject continued with the same breath, and in fact in the same sentence, adding that furthermore he does not need WYNNE until January or February of 1962 when WYNNE will come with a delegation to MOSCOW. Subject felt that the basis for WYNNE's attitude was entirely monetary. As a parting shot subject said that he did not need WYNNE in PARIS, however it would be well if WYNNE would return to PARIS just prior to subject's departure, so that he could notionally deliver brochures to subject and see him off to his plane as a farewell gesture.

3. Although these apparent disgruntlements had to be considered in a serious light because of the overall importance of the operation, they did in fact, as we suspected, turn out to be a tempest in a teapot. That very evening WYNNE denied to Roger that he wished to stop work and furthermore he did in fact of his own volition go to BELGRADE on the following day. All misunderstandings of course can and will be resolved and the situation developed to the point that it did purely as the result of strained nerves. There is no question that subject both wittingly and unwittingly can be most trying in his often capricious demands and handling him on the part of all concerned requires great patience even if understanding is not always possible.

4. While Roger was still present subject was requested to report on his contact with [redacted] so that Roger would be in possession of those facts prior to talking to WYNNE later that evening. As a further sequel to the above disgruntlement on the part of WYNNE, it should be stated here that that same evening at about 2300 hours WYNNE called to determine whether subject wanted to go out with him on the town that night which was impossible and consequently refused by subject. On the other hand just prior to WYNNE's departure for BELGRADE by plane on the following day, subject called WYNNE and expressed his thanks and gratitude to WYNNE for his many services and kindnesses to subject and added a phrase to the effect that he had spoken to his friends on behalf of WYNNE and that they had agreed to take care of WYNNE's problems and demands.

5. With respect to the contact with [redacted] subject said that as per plan he was in his hotel at 1500 hours and WYNNE called him at 1500 hours to advise him that immediately after the close of business at about 1830 or 1900 hours, WYNNE would contact subject again for a possible meeting with a man. He did this at 1745 by phone and instructed subject to come immediately to his hotel. Subject was there in one half hour and picked up WYNNE at his hotel and proceeded in the same taxi to the George V Hotel where they went to the bar. Mr. [redacted] met them in the lobby at which point subject was introduced to [redacted] and when they went to the bar WYNNE went to order the drinks while subject and [redacted] had the opportunity of discussing everything necessary alone. Subject was extremely pleased with [redacted], both with respect to his personality and the way he understood everything subject had to say and subject on his part understood everything [redacted] had to say. Subject told [redacted] about the four main points of technical interest that he had and that subject had been at the Exposition and had been asked about these items by Soviet experts and subject further asked for assistance to visit certain types of plants. [redacted] carefully jotted down all this data and explained that he was going on a short trip on Thursday, the following day, and would return on the 4th or 5th of October. Upon his return he promised to call subject at his hotel, the number of which he gave him, at 0800 hours and arrange a meeting with subject at which everything could be discussed further. He also asked him for brochures as well as to arrange visits to plants. Subject was impressed with [redacted]'s co-operation and added that when these recontact arrangements were made, WYNNE was not present. G. asked subject if subject considered WYNNE's performance in making the introduction and setting up the contact was satisfactory, and subject immediately replied that WYNNE had done a first rate job and that in general WYNNE deserved nothing but praise for his operational support work in general. He further added that he forgot to mention that one reason for WYNNE's being upset was that his wife told him that all was not going on smoothly with the reconstruction job of WYNNE's home in LONDON. Obviously this is another actual factor for WYNNE to be in a more nervous state of mind than usual. At this point Roger departed to consult with WYNNE on his side of the story.

6. G. enquired if subject had in fact consulted with CHEREDEYEV about the clearance for making a telephone approach to TARASSOFF, and subject replied that he could not see the Rezident that morning although he was at the Embassy at 0900 hours, because the Rezident was completely tied up with Embassy matters involving his cover position as Counsellor, because they expected a visit from the Premier of France to the Exposition on the following day and a visit by General de GAULLE on the day after that. This, of course, involved tremendous preparations on the part of the Embassy and extreme confusion. Therefore he could not see the Rezident but spoke to his deputy ANANYEV about the brochures given to subject by WYNNE. ANANYEV, being an engineer, examined these brochures and gave a favourable evaluation. He kept them at the Rezidentura for further analysis to decide what to send to GRU and what to send to the Committee. Subject merely mentioned that he was busy making contacts and would devise a plan after he had everything organised and lined up and would present it later with his proposal as to how to proceed. He said everything was fine at the Embassy and that he had then gone to the Exhibition where the collapsed staircase was being repaired for the following day. Subject stated that he did not call TARASSOFF that day because he had promised us to first speak about it with the Rezident. Prior to discussing TARASSOFF further, subject confessed that there were two reasons why he came with such meagre, if any, preparations from his end in MOSCOW concerning contacts with French businessmen who had visited MOSCOW. The first reason he gave was that he had completely over-estimated our capabilities for having such contacts at our finger tips in PARIS. He understood clearly why this was not the case now and admitted his serious error in making this assumption. The second reason, which was interwoven with the first, was that he in fact was not sure that he would be sent to PARIS at all at the time when the French Exposition was running in MOSCOW, so he made little effort to establish the groundwork for this possible trip, not having much faith in his chances of coming here. Only after the French Exposition was his trip to PARIS formulated and it was too late to do what he should have done earlier. Subject also

emphasised /

#33

emphasised that he was reluctant to seek French contacts in MOSCOW in view of the intensive effort made by the KGB to do just that and he did not want to run into their interests. Subject further emphasised that all Frenchman having Russian names or known to be of Russian extraction are prime targets of KGB interest. In this connection subject was not referring to TARASSOFF, about whom he was unwitting at the time, but to another Frenchman with a Russian name about whom he had learned in the notes on the Frenchwoman interpreter which were given to him by LOPATENKO and which he had shown to us. He was afraid of contacting this man or any other Frenchman to whom he had only a tenuous introduction, because of fear of running into the wrong person and he assumed that we had the capability in PARIS of selecting a reliable person. In this respect subject candidly stated that he wanted to be honest with us otherwise we would have grounds to assume that he was doing nothing to further his own cause and was as lazy as ZENNE. Subject continued by saying that he now felt confident something very tangible would emerge from his contact with [redacted] and now there was a firm basis with which to work to accomplish his mission. With respect to TARASSOFF, he said that that man was most attractive with respect to his position but requested additional checks made on our part prior to his contacting TARASSOFF because of a feeling subject had that possibly the KGB had contacted, ~~if not recruited,~~ TARASSOFF in MOSCOW and he could run into serious trouble because as soon as the name would be traced with the KGB, they would see that subject, as the son of a White Army officer, had been drawn as by a magnet to another White Russian and that would be the end for him. Therefore, no matter how strong the temptation had been and still was to contact this man, subject was very glad that he had the opportunity on this day to consult with us about the desirability of his making this contact and he desired our confirmation and approval that he should do so. All agreed that in view of this most serious consideration and in addition to the obvious fact that the KGB in MOSCOW would have an extensive dossier on TARASSOFF at the very least [redacted]

[redacted] After further deliberation and telling subject that we would consider this, he returned the notes given to him the day before by G. on TARASSOFF and we further decided later that this operational lead would be discarded. Subject also stated that although CHEREDEYEV may approve the contact, with no consultation with the local KGB since GRU and KGB are in a sense competitors for Western contacts, and though CHEREDEYEV knows nothing of subject's White Army father background and neither do the local KGB, still if and when the time comes for further operational activity with TARASSOFF the inevitable KGB name trace at the MOSCOW level would undoubtedly bring out the very dangerous allegation referred to above. Subject of course did not mention anything about this to ANANYEV since ANANYEV is not in position of authority to make any decision and secondly it would be strictly none of ANANYEV's business. In addition subject must make a report on this in MOSCOW, as an operational accomplishment of his, irrespective of how the matter is handled in PARIS and there in MOSCOW that inevitable KGB trace request could cause considerable danger to subject. Subject even suggested that as a third possibility he contact the man without reporting to either the PARIS Rezidentura or to MOSCOW and obtain material from the contact alleging it to come from another source. This was completely discarded and although subject was told we would consider this individual further we had decided amongst ourselves to drop TARASSOFF completely and look for someone else if necessary.

7. Subject then displayed the issue of 'Pravda' for 26th September and pointed out that the Soviet Government had officially announced the forthcoming military large-scale manoeuvres. Subject particularly stressed that the announcement stated that the manoeuvres were planned for the months of October and November. This fact to supplement subject's own report as learned from VARENTSOV and others, that the manoeuvres would last a month with a short possible extension, in subject's view is a bold admission on KHRUSHCHEV's part that he will continue to build up and develop his armed forces in these manoeuvres to cover the entire period after the Party Congress, the signing

of /

of the Peace Treaty and the November holidays to be in position to influence his political moves with the maximum combat-ready forces. Of course these other consequences, namely the purpose for having this force available, was not mentioned in the paper, said subject.

8. At this point Janet entered and was warmly greeted by subject. This event was described to subject as the surprise of the evening and it was held at this time because Janet had to return to London on the following day. After lengthy discussions concerning subject's schedule for his leave of 35 days of which he would take 16 days at a sanatorium at KISLOVODSK and the remainder he would spend working for us in MOSCOW, and after Janet had described fully her normal pattern of movements on Mondays and Fridays to the Arbat area, the following schedule was established to cover the balance of the month of October, the month of November and the month of December. Subsequent contact arrangements would be established in early December based on subject's information on his own plans and subject to our concurrence. The October schedule would begin on Friday the 20th October, which would be a personal meet at the Commission store on the Arbat at 1300 hours. For every Friday beginning with the 20th October and running through until the end of November, this site and time would be considered as the basic meeting. Every Monday following the Fridays above and thus beginning with Monday the 23rd October, would be considered to be the alternate meeting for the preceeding Friday. The place would be the left hand store on the second floor of the Praga Restaurant and the time would also be at 1300 hours. Only in the event that no meeting takes place on a Friday would Janet appear on the following Monday. Hoever, if a meeting took place on Monday she would still appear on the following basic Friday meeting site. The schedule for December would be reversed in some respects as follows. The basic meeting would still be on Fridays and it would take place on the 1st December, but the site would now be in the park at 1600 hours. The alternate meeting would still be on Mondays following every Friday at 1300 hours at the store above the Praga. The one exception would be that Monday, Christmas Day, is omitted as an alternate meeting time. The above is the exact and simple schedule to cover the balance of 1961.

9. /

6

9. Subject mentioned that his own schedule would be as follows: He would leave PARIS on the 15th October; he would need about five days to complete all of his official reports and submit them to both the GRU and the Committee. Then he would request his leave to begin between the 20th and 25th October and the normal thirty-day leave allowance would be increased to thirty-five days to include allowable travel time. Whether he took his sixteen days rest cure at the KISLOVODSK sanatorium during the first half of the 35 day period or the second half of the period would depend on his success in obtaining his putevka (booking) for the first half. At any rate subject stated that he would definitely meet Janet on the first schedules meeting of Friday October 20th and give her a note with written explanation as to his leave time schedule and his date of return to relieve her of the burden of going to the meeting places unnecessarily during that time. Furthermore it was pointed out that with the exception of the sealed cassette packages containing undeveloped film Janet should examine any loose material to see if it does not contain a message for her. Similarly Janet was warned by G. that in some distant phase of the operation it may be possible, even though not contemplated for this current phase of scheduled meets, that subject may include what appears to be a blank piece of folded paper. This paper should never be discarded since it may contain secret writing. The over-all plan was clearly understood by all concerned.

10. At first there was a discussion about using a number of telephone rings by subject to signify that he was going on leave on the following day, but since he will already know by the 20th October and will so inform Janet in a note, the concept of using telephone rings was carried over to another plan which involved the most urgent type of message passing on the part of subject under conditions of crisis which would be included together with a signalling plan and a dead-drop and this concept was discussed at length with a tentative plan established at the end of the meeting after Janet's departure, since it did not concern her actions in any way.

11. /

11. With respect to Janet one additional important consideration was resolved. This was to smoothly effect an actual official meeting between Janet and subject at a reception either at an Embassy or at a private residence to which logically and officially both could be invited guests. Subject reviewed all of the official receptions at Embassies and private homes that he had been invited to on an official basis by dates and places as well as persons since he was a member of the Committee. It so happened that both were invited to the home of Hilary KING, subject once and Janet numerous times. It also appeared that from their respective recollection of the persons present that they both had been there already without being introduced to each other at the party at Hilary KING's first residence on the Prospekt MIRA near the RIGA railroad station on one of the days between the 8th and 10th December 1960. At any rate for chance queries both subject and Janet could conveniently use that place and date as a legend for having met each other as an excellent cover for an unexpected meeting and greeting in MOSCOW should any question ever arise on the part of KGB or whomsoever. In the meantime an actual meeting would be arranged between the two at a reception to be given by Dr. SENIOR, the Scientific Attache at the British Embassy. Subject interjected here that when people have once met officially, subsequent contacts are perfectly normal and approved. As an example he said that GVISHIANI has a good friend, an Italian, whose name is MARINOTTI. This man has been living in MOSCOW for six months now in a very fine room which he uses as an office, in the Hotel National, which GVISHIANI has arranged for him. The man seems to be of considerable value to GVISHIANI and they are close friends and go out together to eat and drink, etc. and in addition the Italian always brings GVISHIANI fine gifts. The Italian often goes to LONDON, NEW YORK and WASHINGTON. Subject was involved in reconciling the mandatory request by IONOV the Chief of all hotels in MOSCOW to remove the Italian from his room during the time that the various delegates to the Party Congress would be in MOSCOW. This was an order from the Supreme Soviet. GVISHIANI did not want the Italian removed, but it was so arranged that the Italian's office with all of his paraphanalia was locked up in the Italian's room while the Italian himself planned to go on leave to Italy during the period of the Party Congress. This satisfied everyone. Subject used this interesting

relationship as an example of approved contact with foreigners by Soviets. Getting back to his own contacts subject stated that he had first met KING at a reception at the Hotel National dining room when the WYNNE delegation first arrived in MOSCOW and later KING invited him to his home for a reception on the Prospekt Mira. The date was about the 8th-10th December and the whole delegation of thirteen persons from England were there, and from the Committee, in addition subject LEVIN, LOPATENKO, POLYAKOV and SHVARTS were there and many other , including numerous people from the British Embassy. Subject was told that the above would be used as a legend and an actual reception where both would meet would be planned for the time after he returns from his leave because there would not be sufficient time to do it earlier. Subject stated that he had also met Dr. SENIOR the Scientific Attache at KING's reception in December 1960, but he had never met him at the Committee offices although he knows that SENIOR comes to the Committee at least once every month, since it was preferable, on the basis of personal security, to meet at a reception at Dr. SENIOR's house, instead of at KING's. Subject was asked whether it would be normal for him to be invited by Dr. SENIOR, to which subject replied that it certainly would be logical and in fact BERDENIKOV, who knows Dr. SENIOR well personally, had called him on subject's behalf when subject was attempting to get his visa quickly to go to LONDON. Subject stressed that at this time it would be very desirable for him to be invited to the British, French and Canadian Embassies and to any receptions held elsewhere by the English, Canadians or French, to which foreigners are normally invited. He also is concerned with the American Embassy, although up to now in a passive role. He had already received an American delegation at the Committee who came regarding matters of patents and licensing. Subject said that the chief was FRIEDMAN and all the other members were also Jews. Subject met another American who was in MOSCOW as a tourist and whose visa he had extended for him twice for ten days each at the American's request. Subject flew to PARIS in the same plane as this American, but only bumped into him at LE BOURGET. The American's name was McKELLAR, or something similar.

12. Subject remarked that anyone who has official dealings with the Committee can invite him with other members of the Committee to Embassy receptions, to private homes of those Embassy officials and even to restaurants which often have been used for receptions in case more room was required.

13. At this point Janet left since the schedule for the balance of 1961 was established. Subject was again reminded to submit his meeting proposals for January and beyond in early December. In addition he was reminded to be sure to carefully document his future information reports with every sub-source, date and circumstance.

14. The MOSCOW signal sites were then taken up. Subject was shown photographs of every site and they were oriented on the map of MOSCOW. After lengthy discussion as to how and when these could be used, subject selected in order of preference No. 3, then No. 1 and last No. 2. The purpose of the signal was to call the observer to the dead drop at once since this communication system was to be used only in the case of extreme emergency.

15. After much discussion regarding the way to secure the dead-drop procedure in terms of minimum time that material would remain therein it was tentatively decided that a signal placed on the adopted site during the night would mean that the DLB would be loaded at 0900 on the following morning. The observer would unload it as quickly as possible. That same evening subject would receive a telephone call, at a time to be set, in the form of a signal of so many rings. This would confirm that the DLB had been cleared. Any other signalling method indicating clearance of DLB such as placing a scratch on the radiator or signalling again elsewhere would require subject to reappear at the DLB site or the signal site a second time, which is undesirable. Thus at this meeting the concept was established and the precise mechanics will be adopted prior to subject's departure.

16. He left at 0045 hours on 28th September and was dropped off a few blocks from his hotel by Roger and J. without incident.

Meeting No. 36 - 30th September, 1961.

1. Subject was picked up at RV Point No. 1 by prearranged schedule from the last meeting at 20.00 hours on 30th September by Roger and G. It was raining slightly and the pick-up was effected with very great speed with absolutely no-one in visible distance. It appears that RV 1 is an ideal pick-up point. This is also Subject's opinion since his accessibility to it from his end is also effective in his ability to observe foot surveillance, and car surveillance is impossible since he crosses the footbridge across the Seine. It has been contemplated to establish an additional RV point which is on the other side of the Palais de Chaillot. As soon as Subject was picked up he also expressed the opinion that RV Point No. 2 should be abandoned because on his last approach thereto WYNNE had dropped him off too close to the Soviet Embassy compound and Subject felt that by chance someone in the future could spot him walking toward RV 2. This was our intention anyway, so while driving to the safe apartment, Roger deliberately drove slowly by the new RV Point No. 3 which, like RV 1 has the advantageous feature of not permitting car surveillance since the last few hundred yards are up a lengthy staircase which the contacting case officer can observe throughout its entire length prior to meeting Subject and escorting him to the car which will be parked at a higher elevation only a short distance away. At the end of the meeting Subject was dropped off in the area of his hotel but he was accompanied by M. J. and "John" and again RV Point No. 3 was pointed out to him for additional orientation.

2. Subject arrived at the safe apartment at 20.20 hours. As he arrived he mentioned what a small town PARIS was, since he had spotted J., and G. who were with "John" and L. drinking coffee on the Champs Elysees. Subject had walked by without batting an eyelash. This was a fortuitous circumstance since it served as an example in reverse to Subject to indicate how easily he too can be spotted by his KGB surveillants. G. explained to the other case officers about Subject's apprehension of RV No. 2 which

/we had....

APPROVED FOR RELEASE
31 MAR 1992

we had just dropped and mentioned his orientation on RV No. 3 and suggested that on the return trip RV No. 3 be pointed out again from the passing car from the other side to be sure Subject would know it thoroughly even at night. This was later done as stated above.

H.: Yes, this is a good thing and we have scrubbed RV 2 anyway. Subject was shown a sketch of the area where he had just been and he identified the exact location thereon.

(3.) Subject then reported as follows:

S.: For the past two days I have spoken on each day to the Rezident. His attitude to me is very cordial and pleasant. He gave me operational funds yesterday and offered me more so that I could entertain my contacts. He even invited me to his home and I will visit him one of these days. I was also invited by LAZARCHUK. I also spoke to GRIGORIYEV and PROKHORCV, who said that they would have liked to have invited me but they cannot and I can meet them in the office and have a bottle of wine with them there. This is because the French surveille them and this would be awkward. It is because they have overt U.N. positions. GRIGORIYEV did not become Captain 2nd rank yet, although it has been submitted. He is still a Captain 3rd rank.

(4.) G.: But you can visit the Resident and others officially.

S.: Yes. Because he has the cover of a Counsellor and I can also visit ANANYEV and KUDRYAVTSEV.

G.: When will you visit CHEREDNYEV?

S.: He didn't tell me when yet, it could be for dinner during the day or in the evening. SOLOV'EV also invited me, he is the GRU officer who works in the group on science and technology under KUDRYAVTSEV. And KUDRYAVTSEV also invited me to visit him on Sunday. Also tomorrow I have to meet a delegation of 14 people who have just arrived. I will report to you on them in a moment. They just arrived today and I have not met them yet.

(5.) S.: Let me say now what items of importance came out of my conversation. The GRU officers are working very actively in PARIS.

/The Rezident....

The Rezident, ANANYEV and PROKHOROV all told me that one can run clandestine operations successfully here. The counter-intelligence activities are ineffectual (nekval[illegible]tsirovannyye) and in effect it does not exist. The French counter-intelligence is very weak and surveille us in a primitive manner. If we ever go out of town by car their surveillance car is right on our tail and will not fall behind more than 600 metres. It is a demonstrative surveillance. In town here although they watch us in the Embassy and in our homes and follow us it is no problem to break surveillance and we can work here as we please. There are millions of handy places through which surveillance can be shaken off. This is the evaluation of the Parisian atmosphere that they have given me. Meetings, passage of information, etc. is no problem at all. Dead-drops are used very rarely since it is so easy to make direct contact. PROKHOROV said that by comparison with Turkey it is quite simple to operate here. There are only two complications here when one approaches a Frenchman directly he usually reports at once to French counter-intelligence that a Russian is interested in him. He reports all conversations and all questions or requests made by the Russian. Of course, when we get a solid spotting report on a particular individual then procedure goes along smoothly. This is where our Communist comrades give us tremendous help. They both spot targets for us and in many cases make direct introductions. Secondly it is difficult for us to get at a target of considerable interest unless we have a Communist's assistance in spotting or actually introducing the target of interest. Therefore almost all contacts are held here in PARIS, the agents are called to PARIS since it is so easy to work here.

6. G.: What is the status of their mission accomplishment?

S.: They do not fulfil them in full but there is plenty of work to do.

/G.: ....

G.: What is the MOSCOW evaluation of their work?

S.: They are not being criticised for not fulfilling every single mission and the work of the strategic intelligence Rezidentura in France is considered to be an active and useful one. They even have illegals here.

7. S.: In connection with this, I want you to write this down. Today PROKHOROV asked me if I ever had run into YERMOLENKO. He was a Captain and an engineer by education who graduated from the M.D.A. together with GRIGORIYEV and myself in 1953. GRIGORIYEV told me with absolute certainty that YERMOLENKO was an illegal and that he is now sitting in some country to which he has been sent. He is slightly shorter than I and rather thin. He was a particularly good friend of GRIGORIYEV's, that is why GRIGORIYEV knows about him.

G.: How would GRIGORIYEV know that YERMOLENKO is an illegal?

S.: We knew this when we were studying at the M.D.A. and several months before our graduation he was taken out of town to a special safe house to be trained.

G.: He has never met him here in France has he?

S.: No. He does not know where he is.

G.: What languages does he specialise in?

S.: His prime language was English and French was his secondary language. But of course God only knows how he may have been re-orientated later.

8. S.: Another interesting item which dovetails with the report I made earlier that the Rezidents are no longer the Military Attache, and that GRU officers seek other cover than the Attache's office is emphasised by the fact that Gen. Major SOKOLOV does not have an Assistant. Actually he is helped in his work as a Military Attache by other Attaches such as by GRIGORIYEV and to some extent by PROKHOROV. This is because there are no other Attache people, the others are all under cover like LAZARCHUK. Just look what a comparison this is with the huge Military

/Attache....

Attache group which existed under Gen. MASLOV.

9. S.: I also want to emphasise that on the same second floor where the GRU Rezidentura is located, beyond the next partition is the KGB Rezidentura. Both are blocked off from other, non-Intelligence offices. And one can use the far stairs or the stairs at the right to go to the second floor so that one can reach the GRU Rezidentura at either end of its suite of rooms. The KGB also have a buzzer system to admit them to their area. The entire area has been checked, rebuilt and made suitable for use as Rezidenturas. So much for that.

10. S.: CHEREDEYEV must know that I have good standing with SEROV and he is being very accommodating.

G.: How could he know this?

S.: I think as the result of his visits to MOSCOW he knows that my father-in-law was a General, that my distant relative is a General and that I know other Generals. He receives me much better than Lev did in LONDON.

G.: When official word arrived here announcing your TDY trip, how would the KGB here in PARIS react to this fact, which they would unquestionably know , with respect to their watching you. Would they not automatically be charged with doing this, particularly since you have come alone and not as a member of a delegation.

S.: The KGB could certainly do this on their own decision and they would know about my arriving here automatically. In addition, since I have come myself and have a travel document that is fairly high level, it would indicate that I enjoy the trust of the organisation that sent me and of the Central Committee. However, not only on their own part locally, but as the result of a direct order they may watch and write a report on me reflecting on my behaviour here. But thus far I have not seen any surveillance on me and I am checking for it all the time. They do know where I live and they have my telephone number.

G.: Of course, if you had a large delegation here withwhom you were involved, there could be a co-opted KGB informant in the delegation who would report on you.

S.: Irrespective of that and such an informant's report, the local

/KGB....

KGB here would make their own report. Today, there are such a large number of Soviets in PARIS due to the Exhibition that they have a problem watching everyone, but they did ask all about me at the Embassy. They do know from simple observation what organisation I belong to since they see with whom I speak and whom I visit at the Embassy. At any rate my work and relations at the Embassy and at the Exhibition are getting along well.

11. S.: However, I request your help in seeing if I can make a contact in the electronics field since both CHEREDEYEV, and ANAN'YEV have asked me that if possible would I please introduce them to such a specialist before I leave. They hope to get even a bit of assistance from all others who come here like I do to help them fulfil their mission. They will advise me about my itinerary after the Exhibition closes and of course their prime interest is that I should visit some plants which are concerned with electronics and chemistry. So please help me to at least accomplish a little bit here. I have given them another little package of brochures and will give them more later. The greatest interest of all for them is the firm BAGNEUX. You gave me two little items from this firm, one was old and they knew about it but the other one was of great interest. What interests them most of all about this firm is that it works exclusively on military orders. No Soviets are permitted to visit this firm. In the past the few who did visit were guided to one side and were given no brochures. They don't even have a catalogue of this firm. They requested me to pick up a catalogue so they could see what the firm is manufacturing. Since it is such a restrictive firm there is certainly no point for me to go there since for me to succeed in this would look very unusual, as a mere traveller in France. However, a few brochures from there would be most valuable if I could get them through [redacted] or through WYNNE. Another firm of interest to them whose catalogues you have given me, is the firm ACTA.

/12. ....

12. S.: Now, with respect to HOOK, I will represent him as an acquaintance of WYNNE's and I need basic background information on HOOK. I did not write it down. I do not think it wise to have HOOK meet anyone in the Embassy personally, after all he is an American businessman and representative here and not a pure Frenchman. I can get some materials through him, some contacts and I will write it up that way, and that is all. With respect to White Russian emigrants I have kept away from all of them who are visiting MOSCOW from here, even though I had many opportunities to meet them. And I will also stay away from them here in PARIS - it is better that way.

G.: Wait and see to whom HOOK introduces you and when you go on your trip you may meet people.

S.: All I need is some basic data on HOOK so that I can report on him in terms of who he is in contact with and where he works but if I do not offer him as a possible contact, they will leave him alone.

13. Subject now looked through his many pieces of paper and notes and said "Please write this down. The Chief of the INTOURIST representation here in PARIS is Anatoliy [illegible]yevich DUDIN, who is a KGB man. His office number is RICHelieu 4740 and his home telephone is TRIanon 14.45. I bumped into him today because he is concerned with all the delegations which arrive here. He is a KGB officer, but I do not know his rank. I can also give you the telephone number of SOLOV'YEV who lives in the same house with several other intelligence officers. It is PASsy 42.31."

14. H.: How long is your delegation going to be here?

S.: They came for twelve days beginning with today, but I'm not going to spend a great deal of time with them, but of course I will meet them and go around with them a bit. The delegation is being taken care of on their trips by Trans-Tour. They are staying at the Trianon Palace Hotel, the phone is D[illegible]ton 88.10. The delegation consists of ten automotive engineers and four of them are experts on (energetika) power engineering. I have not met them yet, I will do so tomorrow and

/their....

their itinerary is already set by Trans-Tour, but I do not have to go with them; I will take them to the Exhibition and introduce them to whoever they will be concerned with. I will find out everything tomorrow and then report to you. I will also check out which ones of these are on my list and possibly there may have been some new ones.

15. S.: By the way at my hotel they moved me from Room 15 to Room 114 on the 6th floor. It is 25 francs, but they promised to move me to a better room later. Don't forget I need some more brochures from England and particularly regarding this Symposium on the paper manufacturing processes at OXFORD.

H.: It has been ordered, we are waiting for it. (Actually the Symposium closed on 30th September).

S.: There is another big firm here, it is called the Syndicate for Electric Motors and Electronics; it is headed by a Monsieur FROUAS who has been in MOSCOW. While discussing personalities in MOSCOW with GRIGORIYEV and PROKHOROV I mentioned how much trouble PLYAKHIN had with his kidneys and they recommended that he get in touch with a Doctor VARSHAVSKIY in MOSCOW who is very famous.

G.: Let me copy down the telephone and address of the Chairman of the Franco-Soviet Friendship Society. (It was Marcel WACHPRESS, Association France-U. de S.S.R., 8 Rue de la Vrilliere, PARIS Ie. Phone. GUTemberg 32.20).

16. S.: By the way I am going to fly home and not go by train. In the first place, why should I waste two days in a train going home and secondly they told me at the Embassy that since my passport is not diplomatic but a service passport (sluzhebnyy) it would be foolish for me to cross Belgium and West Germany with it and the visas would probably take some time, whereas diplomatic passports would be given visas quickly. Thirdly, there is no Soviet plane leaving on Sunday 15th October from here, so I will fly on a foreign plane, and it will be much smoother to travel that way with my suitcases, with no other Soviets to bother me.

/17. ....

17. S.: At the Embassy they had a little bit of conversation in connection with the BERLIN question and here is what I found out. All Rezidenturas received an order (ukazaniye) which arrived during the period of time after I left LONDON and prior to my arrival here. The order stated that during these days of October and November, a special security care (bditel'nost') should be taken in going into town. Officers should go in pairs and not alone and better still in vehicles. Unnecessary agent contacts should be avoided during this period and provocations should be avoided at all costs. This, the Rezident said, in discussion operations with his case officers. This procedure is only for this time period and it is not a categorical order by KHRUSHCHEV to suspend all agent contacts such as the one he issued at the time of the U.2. incident. Thus all unnecessary contacts should not be made and those that are indispensable must be carried out with great precaution. The impression there is that the Peace Treaty will certainly be signed, but anything that will evolve therefrom is pure guesswork.

G.: Did the KGB receive a similar order to the one you mentioned?

S.: I have not been told so but I am positive that they did because they must since those policies are all co-ordinated at the highest level. They would not be permitted to operate and fall into provocations while we carefully wait. This is what I wanted to report of which I did in the past two days.

18. S.: I have just remembered that both PROKHOROV and GRIGORIYEV just today expressed great displeasure with the policy at home of scrapping the Naval Surface Fleet. They consider that the development of a submarine fleet was too one-sided. They appreciated the value of submarines, as experienced mariners would, but they said that all naval officers were disappointed at the scrapping of the Surface Fleet. They would have preferred for the existing fleet to have been put into

/a reserve....

a reserve status, but not scrapped. GRIGORIYEV quoted from a French paper which he had in his hand that according to an article by Admiral GOLOVKO, our Soviet Admiral, the Soviet submarines are better than those of the U.S., have a greater speed and are better equipped. Despite this GRIGORIYEV remarked that strong as the submarine fleet is, it is still one-sided, and now a new surface navy cannot be built rapidly because it requires much time and money which is not available and even many of the shipyards and docks have been reconverted for submarine construction. Even with respect to submarines they considered that they were in insufficient numbers yet.

G.: Did they mention anything about atomic-powered submarines?

S.: No. There was no conversation about these at all. This is all I have.

19. G.: We have a little surprise for you: a first rate technician of ours has arrived and he wants to show you equipment that can be available for you in the near future, even though you will not receive it now and you will see what could be employed to complete our communication arrangements for two-way contact.

S.: That is very fine. I am very happy.

(At this moment J. went to advise "John" to enter and during the few minutes prior to "John's" entering, wine was served and G. engaged Subject in innocuous conversation deliberately. When "John" did enter and was introduced and a few more words of conversation followed, "John" asked G. to explain to Subject that while the introductions were being made over a period of 29 seconds a [redacted] group message was being transmitted. Subject stated that he heard no sound whatever and then being duly impressed "John" removed the transmitter from his clothing, showing Subject exactly how it had been fastened and a detailed briefing began).

20. Subject was then shown how the short ran[redacted]. transmitter operates. Every unit was explained to him including the keyer which

/magnetically....

magnetically impresses numbers on the tape, the spring wound tape sending mechanism which is connected to the transmitter and the battery power pack unit. After going through this and having Subject examine every unit he was told that in the future the three units, namely the power pack battery, the transmitter and the antenna matcher could be incorporated into one package. Subject's comments were then solicited. He said that the single package would be highly desirable for him, and very correctly and with a display of understanding he suggested that the on-off switch of the transmitter be placed in such a manner in the connector from the transmitter to the tape-sender that by releasing the tape for transmission with the release button, this could only be done when the transmitter is in the On position. This would avoid the possibility of activating the tape release for sending and not have the transmitter in action. Another slight modification he requested was to eliminate the letters on the keyer-dial since he would only use numbers anyway.

21. The balance of this demonstration was devoted to discussing from what points in MOSCOW on a radius of roughly [redacted] metres from the U.S. Embassy, he would transmit. He was shown why he should face the receiving station while sending to avoid his own body's insulation effect and the reason why [redacted] metres was chosen was explained to him, namely that in view of possible obstructions of a structural nature between his sending position and the receiving station, the effective maximum range of [redacted] metres on a line of sight basis was reduced to be sure his message would be received clearly and yet this would be the adopted minimum safe distance away from the receiving point from which he should send. It was explained that if he found a position which would afford a line of sight transmission, namely by simply being able to see directly the top of the U.S. Embassy, he could transmit at a convenient distance between [redacted] metres away and [redacted] metres away. He understood that his tape could be re-sent at any time if either he felt unsure that his message was properly sent or sent from the right

/position....

position or if after an established receipt signalling system would be in effect, no such receipt signal would be given. The button to emanate a signal for the receiving station's automatic recording mechanism was shown to Subject and he was told that he must press this button for a minimum of ten seconds prior to transmitting. Various areas in MOSCOW were examined on the map with differences of opinion as to the exact distance from the receiving station, but the principle was clearly established and Subject would check the approximate distance of the ground.

22. Subject's reaction was both favourable and enthusiastic. He stated that this would complete the communication link which had still been missing and that he would hire a dacha and find an adequate safe and weather-proof cache for the equipment. The dacha would only be at a distance of one hour's travel so that no delay in transmitting vital information would be beyond a few hours needed for preparing and coding the message, picking up the equipment and sending the message. Subject requested a supplemental demonstration on the scheduled meeting No. 37 to be held on Monday 2 October. "John" consented to be present since Subject was well-impressed with "John"'s demonstration. A final summary of the operation plans for Subject to be given his equipment at a future date with full written instructions for its use will be described after details are worked out at the next meeting. At this point it appears that when the equipment has been assembled on a hand-tailored basis for Subject and completely tested it could be delivered to the British Embassy in MOSCOW by bag and subsequently passed to Subject in a secure manner by WYNNE or other secure means.

23. After the demonstration Subject was asked about the voltages of the electrical circuits he could be involved with in the MOSCOW area. This would of course involve only the re-charging from a wall-plug of the battery-power pack. Subject stated that all areas beyond the city limits of MOSCOW, which would include the location of his proposed rented dacha, are now on 220 volts. MOSCOW, however, particularly in

/his area....

his area, still operates on a voltage of 127 volts. Gradually the entire MOSCOW area is being converted to a 220 volts circuit, but since this process is a lengthy one Subject requested that the power-pack be adopted to use either voltage. Since this can be done provided the settings are made for the proper voltage, "John" told Subject that this feature would also be included.

24. After the demonstration Subject said: We have not talked over the first batch of materials which I sent to you via WYNNE. There may be additional questions there, but I must see my originals.

G.: We have asked some questions already, but we have the rest of them all prepared and we will get to them later.

(Subject's graduating class photograph of the DZERZHINSKIY Academy, VAK Rocket courses of 1 May, 1959 was brought out and with it was a tissue paper template on which the facial outlines of all persons in the photographs were traced in the exact position that they appeared in the photograph. All these outlines were numbered to facilitate identifying all individuals in the photograph as described by Subject. The Photograph and template were placed on a well-illuminated table and Subject proceeded to describe the officers as follows:)

S.: Probably at this moment from memory I will identify possibly ten or twelve persons, but I will give you the categories of all of them. Later at home, since I have another photograph like this I will try to write out all the names from the notes that I have at home. Are you ready?

G.: Yes.

25. S.: No. 74 - This is Gen. Lieut. TRETYAKOV, the First Deputy Chief of the Academy and he is the Deputy for Scientific Research. Due to this position, he is the First Deputy. He is the author of many works and has particularly been noted for his work with conventional artillery. He lives on Gorky Street across from the telegraph office. He was promoted to Lieut. Gen. two years ago. He is an expert on artillery ammunition.

/G.: ....

G.: Does he write manuals?

S.: He may contribute certain sections of manuals, but he certainly is on the editorial staff.

26. S.: No. 75 - This is Colonel Nikola Arsenyevich FILIPPOVICH. He is the Chief of all VAK courses. He lives in the same house as General TRETYAKOV on Gorky Street. I have been at his house and he is very nice to me. He even said that one day I may take a short supplementary course to learn about new rocket developments. In the VAK programme there are short courses of a month's duration, three month courses as well as year courses.

27. S.: No. 76 - This was Subject's picture.

H.: Why were you setting there?

S.: That is because I was the Sergeant Major of the class (Nachalnik Potoka). The next two are also students and that is all of those who were students in the first row. They are sitting there with me because all three of us were the senior colonels in the class. (Subject now asked for one of his original notes which were handwritten and in which he had several of the names of the individuals in the photograph. This was found and given to him for reference).

28. S.: No. 77 - A Colonel of the Engineer troops, CHERNENKO. I told you about him in LONDON and said that he was Chief of a Scientific Research Institute which is related to both VARENTSOV and MOSKALENKO and is located near SOKOLNIKI. He lives in an apartment near the Frunze Naberezhnaya together with VARENTSOV's former Adjutant. This former Adjutant who is a Lieut. Colonel now, works in the Organisation-Mobilisation Otdel of GUKART under VARENTSOV. While CHERNENKO was taking these courses a reduction in personnel strength was taking place and he had formerly been the Chief of an Otdel in GAU prior to going to the VAK courses, but due to these reductions and also due to his bad relations with ZHDANOV, the latter did not want to take him back to his former position after he had graduated. He asked me very earnestly to speak to VARENTSOV so that he could get a ?

/him....

him and VARENTSOV did this and made him the Director of this Scientific Research Institute.

29. S.: No. 78 - This is a Colonel whose name I do not recall at the moment and, as I mentioned before I have a list of all these names at home and another photograph and I will work this up for you. In the meantime of those I do not know at least I will tell you who was a student and who was an instructor. This Colonel was also formerly a worker in GAU and now he is working in a training centre in the Ukraine, the name of which I have given you previously.

30. S.: No. 73 - Here is the Senior Instructor in both the Academy and for VAK courses. He is the one who gave me the photographs of the rockets which I gave to you. He first gave them to me as supplementary information to paste into my notebook. He is the author of lectures on all TRA installations. He is an Engineer Colonel. These afe all installations for free rocket launching. For example, GAU provides all descriptions of a technical nature for TRA, and launching installations. He works up all this material for lectures and to clearly describe all items of equipment and supervises the setting up of the actual equipment in the laboratories for instruction. I'll get you his name later also, but his speciality is exclusively on TRA and launching equipment.

31. S.: No. 72 - An Engineer Lt. Colonel. He is an instructor on electronics. I will also give you his name later.

32. S.: No. 71 - This is Engineer Captain SHNYR'. He gives lectures on all electrical equipment and circuits for guided missiles. He is concerned with teaching about all the control assemblies (pul'ty) and panels in the missile as well as all of the electrical testing and checking equipment and panels used at the technical position. He is concerned with the electrical circuits and equipment for all guided missiles. He is a very intelligent officer and we were very pleased with his lectures. He appears as a Senior Lieutenant in this picture,

/but he....

but he is now a Captain.

33. S.: No. 70 - A Lieutenant Colonel. He is the Chief of the Assignment Section of classes under FILIPPOVICH.

G.: What do you mean by "Assignment Section" (Uchebnaya Chast')?

S.: He is in charge of the scheduling of classes and administration work in general.

34. S.: No. 69 - This is Engineer Colonel NESTEROV. He is a senior instructor and he is exclusively in charge of all surface rocket handling, transporting and mounting equipment. He is the one who prepared all the lectures for the various cranes, carriers, towers etc. He is a very well-prepared and intelligent officer who has had considerable training.

35. S.: No. 66 - Now will come a whole row of students - this one is Engineer Colonel YEMELYANOV. He was a worker in GAU, but I do not remember where he was assigned after graduation.

36. S.: No. 59 - This is Colonel VYTNOV. He is the Deputy Chief of the Artillery School in KUIBYSHEV.

G.: What is his present position?

S.: He was returned to the same position graduating. However, they wanted to transfer him to the SARATOV Artillery School and possibly he has gone there already. This is because the present Chief at SARATOV is ill and they wanted to send Colonel VYTNOV there as the new chief. At least that was the proposal.

37. S.: The next rows numbers 2, 3, 4 and 5 are all students, unless I see an exception about which I will tell you in a minute.

38. S.: No. 9 - Here is Lieut. Colonel of Engineers BONDARENKO. He is the one I told you about who has just been assigned as the Deputy Commander of a Brigade for technical matters which is located in KREMENCHUG. This is the Brigade of mixed R-11 and R-12 battalions.

39. S.: Now, with the exception of BONDARENKO, No. 9 and No. 11, both of whom are students, the remainder in the last row are all laboratory assistants. They are mostly Senior Lieutenants and Captains.

/In addition....

In addition to these please mark down that in the other rows Nos. 22, 25 and 26 are also laboratory assistants. After lectures are given by the instructors and senior instructors, the laboratory assistants give us our practical work and practical demonstrations.

40. S.: No. 61 - This man was elected as the Party Secretary of our class.

G.: How does this work out, is he merely elected for the duration of the courses?

S.: Yes. There must be a Party meeting every month according to the regulations and Party activities must go on, so he is elected the Secretary of our Party group, but after graduation that is all over and he would rejoin the Party organisation of whatever unit he was assigned to.

41. S.: This is all that I can tell you about my class at this moment, but I will send you supplementary identifications later.

H.: That is very fine and I think that that is about all we should do tonight.

S.: It is only 23.00 hours; we can work a little more. Don't you have any questions prepared?

G.: We have a whole mass of them, but we want to handle them at another time.

S.: Well, we can do part of them now if you like.

G.: I can give you just the first short group of questions because it could serve a dual purpose. In addition to your answering the questions, if you know the answers, the questions will also serve to guide you about what we are interested in and what you can find out for us possibly from the Soviet Embassy here in PARIS.

S.: That's fine, let me have them.

42. G.: First of all. What were the reactions to KENNEDY's speech on the part of officers of GRU or any other Embassy officials who may have expressed themselves to you?

S.: The only reaction I have heard came from Ivan Pavlovich

/KUDRYAVTSEV....

5

KUDRYAVTSEV the Colonel who is the Deputy to the Rezident for Science and Technology. He said that it was very lousy the way the Pravda article reported. It was completely abridged and nothing is clear in it whatsoever. He did not have a chance to read the full text which is always put out by the TASS bulletin but not published in Soviet newspapers. We have a journal called 'Za Rubezhom' in which everything is printed in full. This journal has an extremely narrow circulation and is circulated only to top Party leaders and is hard to obtain. The Ambassador of course gets his full text speech report through TASS channels. In addition I told you before that there is a White TASS and a Red TASS. Neither one nor the other are fully printed in the Soviet press. The Red one is always complete and is for the Central Committee, the White one is somewhat abridged. It is considered more as a review (obzor). Only Party leaders will see the full text, the people will not be able to read it. So KUDRYAVTSEV did not get the speech from the French papers yet and he only knows French, not English. So his reaction was that the speech was completely condensed with many parts omitted so that the people could not read it.

43. G.: Did MOSCOW not ask them to evaluate the speech?

S.: No. MOSCOW did not and would not ask this. In the monthly report that the Ambassador sends in there is a political section in which he will write up reactions, but in this report he will speak of the reactions of the French and other foreigners here.

G.: Did you hear about what their evaluation was of the French reaction to the speech?

S.: I don't know, they didn't speak about it. Of course this is one of the missions of every Ambassador in whatever country he may be accredited to. He must give all opinions and all evaluations of a political nature of the people in the country where he is stationed, but only two days have gone by since the speech and I have heard nothing yet. This will unquestionably be done, and the Ambassador may write up the report himself or sections thereof and he will work

/in concert....

in concert with his political counsellors. These will be neither GRU or KGB but strictly political Counsellors.

44 G.: Do you know what they may have reported to MOSCOW regarding the French attitude towards the BERLIN problem?

S.: I have not heard anything on this either, but beginning with tomorrow morning I will keep my ears open for any conversations along the line that you have just mentioned.

G.: This is all I have for questions for today and they were asked because this is something you might get additional information on here in PARIS.

S.: Yes, I will try. And it is certainly indicative how the Soviets do things, whereas the Western press quotes KHRUSHCHEV completely, here an important policy speech by KENNEDY is deliberately withheld from the people because much material therein runs counter to the policies advocated by the Central Committee and KHRUSHCHEV.

G.: That is very obvious since the concept of the so-called Iron Curtain is not to keep the foreigners from coming in but to keep the people inside from coming out.

S.: Yes, and the people would certainly like to know what had been in the speech.

G.: These are all the questions for tonight.

(45.) G.: By the way did you call that French interpreter?

S.: Yes. I called her the day before yesterday. I told her that I was one of her friends from MOSCOW and was the one who gave her a dictionary. She remembered me and when I asked her if I could see her and take her out she asked me to call her again Monday or Tuesday because she was very busy at this time.

Subject was warned to be careful because there was no way to tell whether she was involved with either the KGB or the French Service, but insofar as Subject had met her officially in MOSCOW and was speaking to her on his own, there could be no great harm even though it is doubtful as to how reliable any contacts through her could be considered by Subject.

/The next....

The next scheduled meeting having been already established, Subject was taken from the safe apartment at 23.15 hours by car to the area near his hotel. He was accompanied by M. J. and "John" who drove him by the new RV point as stated above and he was delivered to the drop-off point without incident.

---oooOooo---

1. Subject was picked up at the new RV point, the Chaillot Palace, by M. and was surveilled from another car by Roger. Subject arrived at the safe apartment at 2010 hours. G.: Did you call the French girl ? S.: Yes, but she is busy today and tomorrow evening and tomorrow evening I will be busy because the Exhibition is closing. I have to be present during the closing ceremonies and there will be a sort of banquet in the evening, where I must also be.

2. S.: The delegation has arrived and they have thirteen people, four of them are metallurgists and the other nine are from various enterprises. They are staying at the Trianon Palace Hotel. Amongst them there are two co-opted KGB workers, one of them is the Chief of the Delegation and his name is Aleksander Pavlovich PICHUGINA (No. 14 on Delegation List, designated as Engineer of the Moscow Institute of Transportation Engineers). Today the KGB of the French Rezidentura called him in and briefed him on the local pattern of behaviour for the delegation, namely that no-one should go out alone, that they should not go out excessively and that a regular schedule should be established. PICHUGINA reported to the deputy KGB Rezidentura Chief here, whose name is ROMANOV, I have not yet found out the name of the KGB Rezident. PICHUGINA reported on the status of the delegation's mission, their general disposition, etc., and in addition said that one of the delegation members, an Armenian whose name is Aleksander Sergeievich SAFARYAN (No. 17, listed as Engineer-Technologist of an Armenian SSR Sovnarkhoz), an elderly man who is short and wears glasses, has brought with him at the request of a friend of his, also an Armenian, from YEREVAN, a bottle of cognac and caviar to be given to a friend of the sender, a French Armenian. He had given him the address of the French Armenian. When this was reported to ROMANOV, the latter said that this could only be done a few hours before the delegation was to depart from PARIS. At that time SAFARYAN could go in the company of the delegation chief or the deputy to the delegation chief, to that address and deliver the package. At this time it was forbidden to get into contact with the French Armenian who could, in some way, develop the Russian or talk him

into /

APPROVED FOR RELEASE
31 MAR 1992

into staying behind or pass him some valuable gift to bring back to his friend. The visit could only be made at the last moment and very suddenly.

3. S.: The others who came in this group were:-

Georgiy Vladimirovich BURDENKOV (listed No. 2 as an engineer of VNII (the Higher MOSCOW Research Institute) and he is an electro-energy engineer of the City of MOSCOW).

He is the other co-opted KGB man.

Then comes, Faina Borisovna GINOYAN (listed as No. 3 and is an engineer of the Ways and Means of Communication of the Armenian SSR Sovnarkhoz).

She is an elderly Armenian women.

The next one is: Marlena Ashotovna OVAKIMYAN (listed No. 13 as a chemical engineer of the Armenian SSR Sovnarkhoz).

She is a sympathetic young woman of about 28, whose father is a prominent Director in the Armenian Republic. You can look him up under the prominent people I gave you a list of. Look under the Armenian SSR and his first name is Ashot, and he is a prominent Party man.

The next one is: Susanna Semenovna PIRUMYAN (listed as No. 15, an engineer-economist of the Armenian SSR Sovnarkhoz).

Then there is Boris Vladimirovich TEPLOV (listed as No. 19 and is an engineer of the factory "October Revolution" in ODESSA).

The next one is Korney Denisovich TOVSTYUK (listed as No. 20 and is a scientific worker of the Chernovitsi Government University of the City of CHERNOVITSI, Ukrainian S.S.R).

And the last one is an interpreter Yelena Filippovna TOLMACHEVA (listed as No. 21 and is an interpreter of the MOSCOW City Sovnarkhoz).

4. G.: How about the other four ? S.: The nine I gave you are all on the proposed list but the other four are in addition to those on the list; they are metallurgists and although I met them briefly I do not know their names yet and I will meet with them again tomorrow. Today a cable arrived stating that twenty others are coming, some may be also on this list and some may be in addition to those on this list. In addition to the four metallurgists who have arrived, with them also came LAPTEVA who is our

interpreter /

interpreter from our Committee in MOSCOW. And they are staying at the Hotel Excelsior Opera. The other nine live at the Trianon Palace Hotel and in addition we also have reserved bookings where necessary at the Palace Hotel. These are the three hotels they use for our delegations. The last one is where the Automobile Specialists will go to. I have continuous contact with these delegations, I saw them today and I will see them again tomorrow. This one has its itinerary already established with TRANSTOUR. My job is to find out the exact itinerary and upon examining the towns that they will visit to arrange places for the delegation members to visit in accordance with the individual specialities and backgrounds of the delegation members. In this respect we already have quite a bit established.

5. S.: Here I have brought a copy of the proposal written by KUDRYAVTSEV in his own hand. He is the Counsellor as you know for Science and Technology and this is an extract from his diary and four copies have been made; one goes to our Committee, one goes to INTOURIST, one goes to the European Section of the Foreign Office and the fourth copy goes to the files of the Embassy. This is the record of his discussions; he gave me this copy because it applies to the delegation which has just arrived, concerning which arrangements have already been made. When others come he will have other arrangements already for them. If he did not have this for this delegation then I would have to arrange visits for them for two or three hours at one factory or another.

6. S.: Here he writes as follows: (subject now reads the entire text of the handwritten two-page report. In view of the fact that subject could not leave this with us since he needed it for use on the following day photography with a polaroid camera was made and after two trials a reduced size copy of each page was made with legible text)

- On upper left hand side was written "From the Diary of KUDRYAVTSEV I.P.".

- On the upper right hand side was written "Account of a Conversation with the President of the firm, Compagnie Generale d'Electricite, 30th August, 1961". The text was "Today I had a discussion with the President Compagnie Generale d'Electricite, Paul DUPONT, who came to the Embassy on the recommendation of DELGOFFE for the purpose of clarifying some questions

regarding /

9

regarding the organisation of the work of a group of tourists who are electrical specialists who are arriving in France during the period of the Soviet Exhibition. My conferee told me that their company is an amalgamation of ten firms and produce a wide variety of electrical equipment and are willing to receive these tourists in order to show them the following enterprises - The Atelier de Delle in LYONS (Apparatus using medium and high voltages) - the LYONS Cable Factory (Le Cable de Lyons) - The Savoie Transformer Company (Atelier de la Savoienne), not far from LYONS. According to the words of DUPONT, these factories are the most modern and will unquestionably be of great interest to our specialists.

I thanked DUPONT for this information and I promised to inform our organisations which are interested in this about him". (It was signed Counsellor for Science and Technology, I. Kudryavtsev". Below a distribution list was written:- "one copy to GKKNIT; second copy to V/O "INTOURIST"; third copy to the first EO (First European Section of the Ministry of Foreign Affairs); fourth copy to file").

7. While the photographic set-up was being arranged, subject said: By the way Harold, will you please find the graduating class photograph we looked at the other day. I have remembered the names of several more officers. I remembered that the Party Secretary was Lieut. Colonel of Engineers PAVLOV (No. 61). And I also remember two others. No. 42 is Lieutenant Colonel RYAZANTSOV. He is a line officer. He came to the class from the Ural military district and went to the same place after graduating, and this other one that I remembered - he is half-Russian, half-Jewish. His name escapes me, it is something like ZUKMAN. That is No. 43. He is an Engineer Major who is working near ROSTOV about 150 km. away at the factory which produces fuels and explosives I told you about before. He is the one involved in making these so-called powder pencils or candles for TRA weapons.

8. After the photography, subject said: With respect to this delegation which has just come and the other one which will come I will consult with them in terms of what cities they are going to visit, KUDRYAVTSEV will give them his prepared itinerary plan and if he doesn't have enough, I may even ask HOOK to indicate where interesting places are. I will not travel around with the delegation. G.: Of course anything that HOOK arranges is primarily for

your benefit. S.: That is right and let me mention one other thing that is important. Today I had a conversation with ANANYEV. He said that now that the Exhibition is closing all you need to do is to tell us what arrangements you have made for visiting places and we will assign Mikhail Kuz'mich SOLOVYEV to you. He knows French well and he can help you photograph etc. SOLOVYEV is an operational case officer about whom I told you before (he works in KUDRYAVTSEV's Scientific-Technical Group). Of course this conversation will take place after I have discussed this with HOOK, with whom I will meet on the 5th October. When HOOK calls me that morning I will ask him to meet with me as soon as possible. I will bring him a present of Russian cognac and caviare and we will discuss the possibilities of visiting France and obtaining brochures. G.: Is SOLOVYEV the operational driver also ? S.: Yes he is. He speaks French well and he has been formerly stationed in Switzerland, and he will be my assistant.

9. G.: How do you expect to work this ? If you go out alone with SOLOVYEV, do you expect to take photographs of military targets en route ? S.: Primarily I will go to the places which HOOK sets up for me to visit. In addition HOOK will give me some brochure materials and these will be supplemented with what WYNNE brings. This is all I have to report regarding the delegations and my work therewith.

10. G.: For how long did you say this delegation will be here ? S.: They will be here for twelve days. Of this time they will spend four to five days in PARIS and the balance of time they will spend making trips throughout France. I will know the details tomorrow. G.: Possibly you will go on a trip as set up by HOOK even before the delegation goes. S.: It makes no difference; once they go on the trip I have nothing more to do with it. G.: When do you think you will go on your trip after speaking to HOOK, do you think it will be on Friday or Saturday ? S.: No. I think it will be during next week, since I will only meet with HOOK on Thursday and that evening we have a meeting together to examine the plan. Possibly on Friday HOOK will show me something in the immediate neighbourhood of PARIS. I asked him to do this. On Monday or Tuesday of next week I will probably go out of the city somewhere.

11. /

11. Now I need some biographic data on HOOK. (J. produced a typewritten paper on which the basic background data and place of employment of HOOK were itemised). Since this material was written on U.S. Embassy paper, subject was requested to re-write all of the data in his own hand in Russian on a sterile piece of paper and George wrote out for him the correct English and Russian equivalents of the data which subject put in Russian text for himself. After writing all the information down in his own hand in his own notes, subject asked Harold what information was obtained for him on the Paper Symposium at Oxford. Harold gave him a paper industry journal with a page and a half summary of the symposium in which it was stated that the Symposium ended on 28th September. He was told that the reports would be formally published in two or three months. Despite subject's displeasure in not having the results of the Symposium in hand as desired by BEKRENEV, the Chief of the Illegals Directorate, for his false documentation programme, subject saw the point that he could not have these results before they were published. He will be given the paper industry journal later as ostensibly coming through WYNNE since he could not present it to the Soviet Embassy now because WYNNE is currently in BELGRADE.

12. S.: Will there be any more brochures from WYNNE for me which I need ? G.: Yes, there will be. S.: And I need something on the paper industry too. G.: This is not WYNNE's field but we will try to get you what we can. S.: When will WYNNE come here ? H.: We do not know exactly, but he will be here before you leave.

13. S.: What else do we have on our programme. Do you have questions for me? G.: Of course we have. First of all we will begin with this concept. Prior to the time that you have your transmitter, which we will discuss later, here is a concept for establishing a signalling system in the event that you have the most urgent information to pass to us. This is for a time urgency that is so vital that you cannot wait for the next meeting with Janet and must pass this information through your dead-drop.

The /

The concept is that you place a signal on this light-pole we spoke of before. (A very lengthy discussion took place on the manner of placing a smudge or numerical signal or some other sort of signal on the lamp post. In addition every possible variation in signalling by phone and by signal was discussed. In the middle of this discussion it was pointed out to subject that the sole purpose for such contact was for the most urgent type of communication to us. This was further spelled out in precise language, namely that if Soviet military action were imminent or that Soviet military action as the result of an action on the part of the West as a result of a Soviet ultimatum would be imminent, was the nature of his communicating to us by this means.

14. It was finally decided in principle, with the details to be worked out later that such communication would be transmitted to us as follows. At a time to be definitely set, but tentatively established at about 0830 hours on any day, subject would telephone on a number to be given him and would ring continuously until the telephone was answered. If a male voice said "Hullo" or anything else, subject would hang up and again make the same call and again hang up if a male voice answered the phone. During the late hours of the previous evening, as a double check subject would have placed a dark smudge a few inches below the number 35 on light-pole No. 35 at the signal site. The recipient of the message, which obviously should be the party for whom it was intended, since it would be a male voice, would immediately check the pole to be sure that the telephone call could not have been in error, despite the double call. In this case, and only in this case, would subject load the drop with his urgent message at approximately 0845 hours, knowing that the dead-drop would be cleared within a half hour more or less. He would make his call from a public phone booth, timing himself to be sure that it would be available at about 0830 hours. Then, knowing that he had already placed the signal the evening before, he could leisurely load his drop and proceed to his office, which is directly en route in a matter of minutes. Should a female voice answer the phone he

would /

would still have the option of hoping to hear a male voice on his second call, if he did not hear a male voice on his second call, he would assume that his message was not received by the party for whom intended and he would not load his drop and he would be forced to make contact on the next day. Under no conditions would subject be obliged to say one word on the telephone, concerning which subject has a most sensitive apprehension, particularly since he is sure that the KGB has a tape recording of all such phone calls and they could either match his voice or break it phonetically if he were under suspicion as the last straw in his defence against any possible accusation. The details of the above principles which were adopted will be finally agreed prior to subject's departure). H.: I think we have come to an understanding of this emergency procedure and we will take it up again later before he goes back when we have the details all worked out.

15. H.: Let us do questions on the Kremlevka first, then we will go into the radio demonstration and if we have any time left we can cover some more questions to the extent that time permits. G.: First of all how did you obtain this kremlevka directory ? S.: This directory belongs to GVISHIANI. I had been working in his office and I had the chance to photograph it. The cover was red; isn't GVISHIANI's name written on it somewhere ? H.: No. The name doesn't appear. S.: Here is exactly how I did it. I was working in GVISHIANI's office late on Saturday for him and there I photographed the Government Office telephone directory, but this Kremlevka I took home with me overnight and photographed it at home. G.: What are the peculiarities of this telephone system ? S.: It is classified as a Government telephone system. There are two such systems. One is called the V.Ch. which ties in MOSCOW offices to its central and the lines go throughout the land to all the oblasts where there are cities and to all oblast committees of the Party wherever a responsible Party official may be stationed. It is a high frequency system. One must request from the central switchboard to be connected - one cannot dial a number

on this system. The caller's number is asked for and given when a long-distance call is made. The Kremlevka is exclusively a MOSCOW circuit which inter-connects all the main Government offices. There is none like that in LENINGRAD. You probably have read in the instructions that the system is under KGB supervision. It is stated that Top Secret conversations are prohibited, but all and everything is discussed on this line despite the admonition. G.: Is it also a high-frequency line ? S.: Yes, it is but it is not on the same frequencies as the line going throughout the land which is called the V.Ch. G.: One can dial a number on this one - is that right ? S.: Yes, and four digits are used. G.: Is it ever called the Vertushka ? S.: Yes, it is. It is called either the Vertushka or Kremlevka; it is the same thing. Vertushka is the slang expression while Kremlevka is the official designation. G.: Is it correct to also call it a V.Ch. type system ? S.: Yes it is but again I repeat that its V.Ch. frequencies are in a different range from that of the line called the V.Ch. I forgot to mention that the long distance V.Ch. line runs to all countries of People's Democracies.

16. G.: Is it possible to be connected into the Kremlevka system from the municipal line or vice-versa ? S.: No, absolutely not. The only thing that can be done is to tap in to the cable if one knew where to do this and the conversations could be overheard if technicians can analyse the frequencies. In this directory all members of the Ministry of Defence are not included and in case of similar last names the office of the individual is stated to avoid confusion. G.: On what basis is it determined whose name appears in a directory and whose does not or who gets a Kremlevka telephone and who does not ? S.: All those who have important positions in any committee would have this telephone. Some people would have two telephones for example, the Minister of Defence would have his office in the Ministry of Defence listed and he also has an office in the Kremlin. G.: Is there not a determination on the basis of which one does or does not receive this telephone ? S.: Yes, there is. This is set by the (upravlyayeshchim delami) Executive Officer of the Council of Ministers of the U.S.S.R. He also determines who should be included in the special and restricted

dining room roster and in the roster permitting those to go to closed stores. This also includes special hospital privileges. It is the same old system of who gets a more elegant dacha and who gets a shabbier one. This Executive Officer has a big office which services the Council of Ministers. I just remembered that at one time CHERDAYEV was the Executive Officer. G.: Do not the various committees of the Central Committee propose or direct who should be given this telephone also ? S.: Of course they do; the Executive Officer merely handles the mechanics for which he is given instructions.

17. G.: On what lines are all the headquarters of the Military Districts connected with the MOSCOW Headquarters ? S.: All of these military headquarters are connected on the V.Ch. line to the Ministry of Defence which is the same line which connects all Party Headquarters and Governmental Headquarters. Of course this cable is such that it is a multiple conversation carrier and the various conversations are transmitted on various frequencies. G.: Suppose a military alarm message is to be sent out to all the Headquarters ? S.: It would go out on the V.Ch. line to all military centres, political centres, etc. as-required. Soviet technology claims that neither this V.Ch. line nor the Kremlevka can be monitored. G.: Do they ever encode conversations when particularly sensitive information must be passed and by means of the V.Ch. system ? S.: Yes. This is sometimes done since the Eighth otdel has a sub-section at every military headquarters, which can code and de-code. This is called a Shifr-telegrama. Of course these messages can be sent either by wire or radio. When used on the V.Ch. line it is called a telefonogram. The message is transmitted by numbers.

18. H.: Why does MOSKALENKO have two telephones ? S.: That is because he is considered to be very important as the Commander of Strategic Rocket Forces and one of these could be the number of his headquarters in PERKHUSHKOVO and the other one in MOSCOW. G.: Presumably KHRUSHCHEV has all telephones ? S.: Yes, but his home number is not given in the Kremlevka, neither is that of MIKOYAN. However I know that they both

have /

have a home number tied in because in an earlier edition of this directory, KHRUSHCHEV's home number was listed.

19. G.: Since when has this Kremlevka system been in operation ? S.: I would say since about 1930. I'd like to say this about the system, we once had a lecture on it. It is possible to find the key to the electrical frequency circuits used. The important thing is to locate the cable and to work out the formula (regim) to break the conversation. Another thing I forgot to mention is that all outstanding designers such as rocket and aircraft designers are also listed in this directory, such as CHELOMEY. H.: If we were to compare the names in the Kremlevka here with the names in the directory of the Academy of Sciences, thereby could we not determine who are the important men working in various fields ? S.: Of course this can be done; this can all be established. I told you that in LONDON, and you will see that only the important scientists will have a Kremlevka telephone. This is an important analysis and this work should be done because it will provide solid information.

20. ("John" asked that if the decision to attack were made, how would this order be transmitted to the various military commanders in the Soviet Union and other places such as the D.D.R.). S.: The communication means that would be used would be all those which have communications security. All V.Ch. lines would be used. And coded telegrams would be sent to all those commanders of every echelon who have sealed orders. They would be told to open their sealed orders and act accordingly. Therefore this message would be transmitted by the V.Ch. by coded telegram and coded radio messages. It would be interesting to listen to the conversations on the Kremlevka. I am sure that our technology could break the electrical code if they could only get at the cable as they did in BERLIN.

21. G.: These are all the questions for the time being. Now you stand up and give your demonstration with the radio equipment and explain everything yourself about what you understand about its operation. "John" will just stand by while you demonstrate.

(For /

(For a period of about forty minutes subject slowly went through the description of how he would use each item of equipment. He connected and separated all electrical and physical contacts which are necessary to join together for various phases in the process of transmitting a short-range coded radio message. Subject began with the keyer which placed the coded text in groups of five numbers on the tape. His procedure for using the one-time pad was also reviewed to remind him how to do this without reference to his printed instructions and for the purpose of refreshing his memory as to the number of additional groups needed with his encoded message text. Subject made the expected few errors and learned more thoroughly when corrected. Although he understands the procedure well, not only is actual practice necessary and desirable but when he does receive the instruments, they will of course be completely described as will their use and functions in his printed instructions. At this point the important thing is that subject likes this device and feels that it will serve a very vital purpose in affording secure two-way communication should all other means be denied by circumstances in the future).

After the demonstration, although it was already 2300 hours, subject said that he would like to clear up some of the questions we had prepared for him so it was decided to cover two sets of questions dealing with VARENTSOV's and ODINTSOV's articles.

22. G.: Throughout VARENTSOV's article certain general military terms were used which refer to sizes of units. I have them all listed and will read them to you slowly. For each of these, after you have defined them, we would like to know which specific size unit each term could apply to; I will read those off also. For example here are the general terms: Zveno; gruppirovka; ob"edineniye; soyedineniye; chast'; and podrazdeleniye. These are standard Soviet military terms. S: That is

absolutely /

absolutely right. G.: Now the point is, exactly to which of the following does each term apply and to what does it not apply ? Division; brigade; front; military district; an army ?

23. S.: I understand, let us take them in order. What was the first one ? G.: Zveno. S.: The zveno as a rule as a specific term is used in aviation. It is a small unit of aviation (3 planes). The concept of a zveno can be that of a link in a chain. It could be also used in a context like this: in testing rockets at the technical site when a certain category of assemblies are checked the Commander may say "There are many errors in this zveno". G.: Does it apply to infantry ? S.: No, but you can say something like this, that the signal zveno of an infantry unit is not adequate. In short these are general terms for a very small portion of equipment or personnel and the only specific meaning is that used in aviation.

24. G.: Next is gruppirovka. S.: This is a very wide concept. It could be a grouping of types of combat arms such as infantry with tanks and possibly with aviation. These could be referred to in connection with the grouping of forces on a specific sector of the front lines or in a specific direction. It is a large group usually and could consist not only of divisions, but even could include armies. In fact it is rare to say there is a gruppirovka of divisions. That would already be an ob"edineniye. The gruppirovka is generally larger and its meaning is directed to the fact that a number of combat arms are involved.

25. G.: How about ob"edineniye ? S.: That is a specific groupment of a single type of combat arm, for example a higher commander may put together a specific number of artillery units into one group.

26. G.: How do you define a soyedineniye ? S.: In the Soviet Army when one takes specific organic units such as a battalion or a regiment or a division and when any combination of these are put together for a particular tactical purpose this is called a soyedineniye. The soyedineniye, like the gruppirovka, also involves putting together various types of combat arms, but it is for a small composite unit as compared with

the larger one in the gruppirovka.

27. G.: How about chast' ? S.: This is a specific organic unit of any category. It could be a regiment or a battalion. It could also be an aviation squadron. G.: In other words it is any unit, generally small, which has its own fixed table of organisation. S.: Yes. That is right.

28. G.: How a podrazdeleniye ? S.: That is any tables of organisation sub-unit of which the unit itself is composed. For example, the company is a sub-unit of the battalion. A platoon is a sub-unit of a company. It applies to any type of troops.

29. G.: The next question also in VARENTSOV's article context is this: he named rockets as the R-170, R-30, R-300 and R-550, which are of course different from academy usage. Have you heard of these before and are they real or cover designations ? S.: These are all cover names but for entirely new types of rockets. I gave you the index designations for all the rockets we studied at the Academy except the Krylatka which I was not able to get yet, but these are all new rockets he refers to. G.: When are such designations as these used ? S.: These cover designations can be used in Top Secret articles such as the type he wrote. In lower classifications this would not be permitted, they would simply state SA - whatever it might be. H.: In the artillery journal, which is still Top Secret, they did use the SA designation. S.: After all a Top Secret document can certainly refer to materials of a lower classification, but not the other way round. Even at the Academy we were categorically forbidden at examinations or during lectures to refer to the word "rocket". The word "izdeliye" ("manufactured product") was used.

30. G.: The article also speaks of the reductions in time for preparing a missile for launching. It said the missile preparation was reduced from 2 hours to 35 minutes. The data preparation was reduced from 95 to 8 or 10 minutes and the geodetic tie-in time required was reduced from 24 hours to between 1½ and 2 hours. S.: First of all it still takes

a considerable time, sometimes days, not only hours to check the rocket at its technical testing site prior to being moved to the launching site. This still remains as it was and all of these procedures at the technical site which include the first, second, third testing categories etc. still take considerable time. But what the article refers to is that when the missile is brought up to the launching site, there they have worked out procedures which save considerable time. The preparation means that the final checking of the rocket must be made with the rocket already mounted on the launching pad. The data is obtained much faster now from the geodetic calculations in tying in the location of the target in respect to the rocket. And the inclusion of the necessary data into the various collimators and aiming devices to direct the rocket to its target, must also be done. This is too part of the missile preparation. The data preparation means working out the geodetic data into the numerical values by which the rocket mechanisms will be set to direct itat its target. This total time at the launching pad itself beginning from the moment the rocket is brought up until the launch button is pressed, has been considerably reduced from hours to minutes. The actual geodetic computation which produces the required data in the past had taken several days, as I mentioned from VARENTSOV's remarks to CHUIKOV, but now they have reduced this time, not only by having greater experience, but by having computed second and third order triangulation co-ordinates from the first order triangulation co-ordinates. Of course when you mention 1½ to 2 hours, this still depends upon what type of rocket you are talking about. There are still large rockets which require several days of computation to tie them in to new sites. G.: Can you explain by what means they were able to accomplish this ? S.: That is very simple. It is the result of continuous training and they were able to work out computations faster and faster. In addition to training better maps have been produced of the areas where the launching sites are to be used, so that more accurate and faster tie-in data of the rocket site with respect to the ground, could be made. In addition to this there have been improvements in optical instruments.

31. G.: When Sergei Sergeievich wrote this article he referred to recent exercises and war games. Do you know which exercises or manoeuvres he referred to ? S.: In the first place at all major manoeuvres there are representatives from every committee and from the headquarters of every combat arm. Whenever rockets are used in conjunction with these exercises everyone concerned with rockets from whatever viewpoint writes up summaries and conclusions of their own. I am sure that VARENTSOV used a number of exercises and the reports thereon to form his own overall conclusions. Manoeuvres varying in size are going on frequently in one place or another and all rocket employment is very carefully written up and analysed, so although the manoeuvres were no doubt recent that he referred to, I believe that he must have used the composite data from a number of manoeuvres.

32. G.: Can you define the following terms as applied to missiles and combat actions of a front - strategic, operational and tactical ? S.: In the first place when you consider a front operation, the strategic objectives and operational objectives would be examined together and at one time. However, the commands which control these weapons will be different. MOSKALENKO for example would control the firing of strategic rockets, but KONEV the Commander of the Front, though he does not command these rockets, he would know that at a strategic range MOSKALENKO plans to launch say six rockets. The operational rockets would be under the control of the Front Commander. The tactical rockets would also be under the Front commander, except that he would sub-allocate them to lower echelons. G.: The confusing concept is to differentiate between the ranges at which the strategic and operational rockets are used. S.: To me it is perfectly clear. I do not understand how it can be confusing. Take all three types of rockets assigned for use in one direction. Let us use for an example West Germany. KONEV, the Front Commander would know that MOSKALENKO will lay down fires by rockets up to say La Manche. He will know how many rockets and the time of launching, but of course KONEV will not command these rocket forces. Let us assume VARENTSOV will be assigned as the tactical

rocket chief of this front and KONEV will tell him to fire up to a depth of say 2,500 kms. against targets in the operational rear of the enemy. Shorter range tactical rockets would fire say up to a range of 400 kms. And these fires would all be co-ordinated under KONEV's command and VARENTSOV's headquarters. H.: But what are the ranges for these tactical and operational rockets ? G.: You see, at what point does one category of rockets terminate its range capabilities for the other category to take over from there. There seems to be an overlap in the ranges. S.: I see. Well, let us say then that the tactical ranges for the T.R.A. (free rockets) and heavy artillery operates at ranges from 100 to 200 kms. The operational rockets would operate from say 200 kms. to 1,000 kms. and even beyond that. And anything beyond that would be strategic weapons. For strategic rockets we must include types such as the R-14 with a range of 4,500 kms, I.C.B.Ms and also include missiles launched into space. KHRUSHCHEV is planning to use space rockets. Of course the overall control would always be centralised right up on the Central Committee level. They will determine what yields of atomic warheads will be delivered by what rockets, even down to the tactical rockets.

33. G.: Now, referring to ODINTSOV's article. S.: You mean the article on the rear areas ? G.: Yes. He referred to a missile troop exercise called "DON". Do you know where this was held and when ? S.: This was an internal exercise in one of the internal military districts and I do not know exactly which one but it was held in my opinion a long time ago. I think more than a year ago. I'm glad you mentioned his name, because I have just remembered that under his editorial guidance they are now publishing four separate sections of manuals on rockets to be used as texts for study at the Academy. Everything is included in these manuals that is taught at the five faculties. The manuals were written by the collective efforts of specialists and instructors. There is already one manual published which is Top Secret with a very limited distribution for study of rockets at the Academy.

All /

All sub-divisions are there beginning with the schematic composition of the rocket; all checks and tests required, all equipment needed for this, etc. In short all the material which we had studied from separate lectures and study have now been incorporated in this manual. I certainly will be hunting for these four sections.

34. G.: ODINTSOV in this article states that each rocket installation should have the following number of missiles for a two-day combat operation. For tactical and operational/tactical installations - 3 missiles at each installation; for troops anti-air installations (voyskovaya zenitnaya) - 6 missiles at each installation and for Army troops (T.R.A.)(voyskovaya armeyskaya) - 8 missiles at each installation. What are the last two categories of missiles and how does the last differ from the first ?
S.: All of these values are units of fire (boyevoy komplekt). At one time I gave you values of this type and the same value exactly for the anti-air installation. And now in this article the inference is that this was all checked, tested and adopted. The last category, namely the Voyskovaya armeyskaya includes without exception all T.R.A. installations and in addition would have short trange guided missiles. For example such as the R-11. The difference between this category and the first one is again a matter of range, all the short-range missiles will be in the latter category, but there will be a lot more of the guided missiles in the Operativno - Takticheskikh because a greater range is required. Thus far all T.R.A. in the Soviet Army is restricted to shorter ranges, but if in the future new fuel developments are made, particularly using solid fuels, then the T.R.A. equipment may be also used for operational ranges.

35. G.: In the rear area support of missile units of a front, what is a "Parkovyy Division" (Motor Pool Battalion). Is it only the vehicles for moving missiles or does it have other functions ? S.: This is exclusively the transport equipment for moving rockets - nothing else. You must have figured out the designation of the officer I told you about who works in the large artillery base near MOZHAYSK. I sent you his

characteristics /

characteristics, his name is Yevgeniy. The sub-unit which he commands, which is abbreviated as the PKP, or rather PKTs, that is the transportation service of this Tsikla (cycle, meaning within the artillery base compound). This includes transportation by rail since rail lines run into the base as well as motor transport. I was thinking about this because I have failed up to now to give you a manual of military abbreviations. And I was thinking of this designation I just mentioned because you may have had trouble breaking it down, since I did not spell it out for you. I will be sure to get you this manual of abbreviations because it will be much easier for you to figure things out.

36. G.: We'll stop with this question now, because we want to work up more reference questions and we want to save the ones we have already for later meetings. Now we will plan for Thursday, because that will be an important day. What do you propose to do ? In the morning you are expecting a telephone call from HOOK. S.: He should call me shortly after 0800 hours and I will try to arrange with him to meet as soon as possible, because after I meet with him I may have to report something or other to the Embassy. I do not expect to take any out-of-town trips this week. If he arranges a short visit for Friday somewhere in PARIS or the suburban area, then I will go visit that place on Friday together with SOLOVYEV. If not, then I'll go visit whatever he has set up for me next week.

37. G.: If you go out of town with SOLOVYEV by car and particularly in the outskirts of PARIS, be very careful about taking photographs because since Soviet vehicles are well known, you will draw a surveillance car in very close pursuit. S.: I don't think I'll take any photographs. That is not so important. If I could pick up some brochures or other types of documents, that would be much more important. I can get a camera at the Embassy at once, but I haven't asked for it. If HOOK could get me some places to visit and some brochures regarding electronics, that would be ideal. Then if I could find some person I could introduce SOLOVYEV to I would consider my missions to be fulfilled. How about this man with the Russian name ? G.: We decided to drop him completely, it was too risky. S.: I

think /

think you are right and I even had an experience at the Exhibition of a possible provocation. A Russian speaking Frenchman said that he had escaped from Siberia in 1925 and was born in RIGA and wondered if he would be given a tourist visa now and not be jailed again if he took a trip to the USSR. I referred him to the Consulate and when the man invited me to a restaurant to discuss this further, I said I had no time. This could have been a provocation.

38. G.: Of what help could we be to you concerning your itinerary when there would be no point to spot military installations to you en route since you cannot photograph them. S.: I'll have to cancel this request to you. Since you cannot arrange this as you did in England and you have to expose yourselves to the French Counter Intelligence in order to make such an arrangement here, it is better to drop it. If SOLOVYEV and I happen to see a military air base we can write up a report thereon on the basis of visual observation. I need some material from England yet, especially on the type of military industrial items I reported to you about so that I can give some materials to CHEREDEYEV to send home via GRU channels. Both he and I would get credit for this at GRU. Materials of lesser value we will send to the Committee. When I get to MOSCOW and deliver the presents to SEROV and if I did accomplish something here I would ask SEROV himself, or ROGOV to call GVISHIANI and thank him for sponsoring my trip since it benefited GRU. At the same time I will bring presents to GVISHIANI and others in the Committee and they will all be inclined to send me off on another foreign trip in three or four months. However, I definitely will not go abroad again during the rest of 1961. I will even attempt now to work to GVISHIANI and SEROV to see if I can get a visa to the United States. If the Americans give me a visa, then our KGB will not have an argument against me that I am known to the West as an intelligence officer and spotted. I am worried a bit now because as time goes on and it is already the 2nd October, I do not have any valuable materials at hand yet, but particularly in connection with this long list of target items that I reported to you on. G.: All this may develop favourably after you meet

HOOK /

HOOK. That is when we will review the whole situation and see what can be done. S.: When I gave them the document on the Nimonic-115, that created a most favourable reaction, they were delighted with it.

39. J.: Suppose HOOK would assign a man to go with you on trips, how would this affect your situation with respect to planning to go with SOLOVYEV. Would you all go together ? S.: In the first place HOOK should not go with me anywhere, just make the arrangements. If he assigns a man, that is fine but the man should not go with us, he should go in his own car and I will go separately with SOLOVYEV in our Soviet car and meet the man wherever he says. I could go alone with the man in his car for a short ride in PARIS or the outskirts of PARIS without SOLOVYEV, that would be allright, but on a longer trip I would go alone with SOLOVYEV and meet the man at the factory site, and on second thoughts, may be SOLOVYEV and I will take a camera along. At any rate, please try to provide something of value for me because I came back from LONDON twice with something good and this time in PARIS I have nothing to bring back.

40. G.: Tell me specifically what would be the best assistance you could get from [redacted] ? S.: I already told him, I said that I would like to have some brochures on something like Nimonics and other heat resistant steels. Other than that he should arrange for me to go to certain factories and simply give me the address and appointment times and the name of the person I am to meet. I will pick up any brochures I can from such contacts, but HOOK should also try to collect a group of brochures for me. I can legend the acquisition of these very easily. G.: Of course, whenever SOLOVYEV goes with you, your legend will be restricted to exactly that which SOLOVYEV also knows. S.: That's absolutely right, but I can meet [redacted] alone or make a short trip alone and that is none of the Embassy's business. Although they treat me very well and have complete trust in me. SOLOVYEV speaks no English at all, only French. J.: I would like you to do one thing when you speak to [redacted] and even more particularly to any

Frenchman /

Frenchman you may meet, take it easy and don't press too hard. S.: That's right, and I will not introduce HOOK to anyone, not even to SOLOVYEV, he will remain my own acquaintance exclusively. J.: Would you go to [redacted]'s home if he invited you ? S.: Alone ? With the greatest of pleasure. (Subject was shown a number of books, including a catalogue by ARMCO and a very fine French business firm directory for all major industries in France. Subject was impressed by the latter book, but kept stressing that the nature of brochures that he desires would be in the category of restricted or documentary type brochures similar to that we previously gave him on Nimonic-115.

41. Subject then described further how everyone in theSoviet Union at every level of officialdom was an absolute grafter and has his hand out to receive bribes and gifts. Subject enquired as to the status of our having acquired some of the numerous gifts which he planned to bring back and was shown the rare wines of 1917 vintage and other items. He then was trying to reconcile the size of the many items already acquired, such as his candelabra and his framed picture of the sea, which would not fit in any normal suitcase. G. suggested taking the frame apart, but subject was reluctant to do it, and though the most practical way of bringing it in would be simply to wrap it in paper and carry it aboard the plane (Western plane) and get it to MOSCOW that way, for some reason subject was reluctant to do this. In order that subject could contact us by phone if he were to be free on Wednesday evening for a pre-arranged entertainment by a lady it was arranged that subject call the safe house just prior to 1200 hours on Tuesday and say in English that he is feeling well or not well in case he is going to be tied up. At 1145 hours on 3 October, subject called and stated that he was feeling fine. The place for the rendez-vous would be shown to subject while en route to being taken home from the meeting. The meeting for Thursday was set for the same new RV point which worked very well and again the time would be at 2000

hours /

6

hours. Subject left at 2330 hours and was driven by Roger together with J. and "John". En route the RV point for his Wednesday night appointment at 2100 hours, in the event that he should be free, was shown to him. He was delivered to the general neighbourhood of his hotel without incident).

MEETING NO. 38 - 5th OCTOBER, 1961.

(1.) Subject was met at RV Point No. 3, the Chaillot Palace, by G. and led at a distance to the parked car driven by M. Roger again provided surveillance cover. Subject arrived 15 minutes late and explained that he was tied up with his delegation and could not get free to make the meeting exactly as scheduled. Upon review of the circumstances at the pick-up point by G. and Roger on the next morning both parties who were present at the RV point felt that several persons in the area were observing everyone who passed at a discreet distance, but they certainly appeared to be members of the French police in civilian clothes. Since an intensive curfew regulation against Algerian Moslems is currently in effect and officially begins at 2030 hours, this could be the logical reason for French detectives to be actively patrolling. At any rate to play safe it was decided to abandon RV No. 3 and to return to RV No. 1, the footbridge, which has always appeared most suitable and had not been used for several meetings, only for the normal security consideration to break a pattern.

(2.) Upon arrival subject immediately began to describe everything that took place with respect to his contacts with [redacted] This was a most important day in lining up whatever arrangements were possible for subject to exploit in order to fulfil his missions for both the Committee and GRU on a legitimate basis. Luckily it had been possible to obtain a report from [redacted] on his meeting with subject via Al prior to subject's arrival at the meeting. The upshot of the report was, to quote Joe, that subject "hit like a cyclone" with his demands and has even arranged a trip for his entire delegation despite the fact that he was admonished against exerting pressure on HOOK.

(3.) S.: Excuse me for being late, I was held up by the delegation. Let me tell you everything in proper order. This morning, just a few minutes after 0800 hours, [redacted] called me at my hotel, and made an appointment with me at his office at 1100 hours. I went there and spoke to him for a whole hour. He received me very graciously and I also brought him some small gifts of Caucasian wine, caviar and cigarettes. I told him what I needed with

respect /

APPROVED FOR RELEASE
31 MAR 1992

respect to places that my delegation desires to visit in the PARIS area and in other towns. I also told him about what brochures I needed and about the places I want to visit out of town next week. He wrote everything down while we discussed this for a whole hour and we worked out a programme. According to this programme, tomorrow at about 0830 we will be taken to the Bourget area to visit a large electrical factory which manufactures electrical equipment. [redacted] has very kindly arranged for a representative of his to come to my hotel at 0800 hours. This man will be a guide and will go with me to the hotel where our delegation are staying as tourists. I have arranged for an interpreter to be there and have instructed the delegation chief to have everyone up, fed and ready to leave at 0830 hours. G.: How many people will this include ? S.: There will be nine of them and myself will make ten. I will go with them on this visit. G.: What happened to the other four ? S.: They are the metallurgists and they are already travelling through the country on their pre-arranged itinerary. G.: What happened to your Committee interpreter, LAPTEVA ? S.: She is also with them. [redacted] also got three brochures on Nimonics and may even get me a sample. This will take care of the delegation for the present and on Saturday evening they will leave town to visit places in France and [redacted] has arranged another place for them to visit during this trip. TRANSTOUR will take them and he will arrange for them to visit places on Monday and Tuesday. G.: Will you go with them on this trip also ? S.: No. I will just go tomorrow, and from there on they will go by themselves.

4. S.: Now, for me and for the representative of the Embassy, SOLOVYEV, HOOK has arranged either for the 11th or the 12th October, a visit by SOLOVYEV and me to the Electric Mechanic Factory at LE HAVRE. The Director is Mr. ROGSELL (phonetic). I will go there with SOLOVYEV and possibly [redacted] will have a guide go with us. This will take place on either the 11th or 12th October. In addition I will visit the firm "Jeumont" (phonetic) in the town of "JUMONT" (phonetic). This is about 250 kms. from PARIS. He said that each place could be visited during the course of one day. This trip to "JUMONT" should take place Monday or Tuesday, and the one to LE HAVRE on Wednesday or Thursday. The dates may be re-arranged according to how [redacted] is able to set them up; he will tell me when the dates are set. The Director of this plant in "JUMONT" is M. MOLLET. My only request to [redacted] was that

all of these visits terminate by Thursday. This would make it possible for me to work with you on Friday and Saturday. Therefore for these two visits on my part I will be accompanied by SOLOVYEV and will ride in a Soviet car. [redacted] is also seeing if it is possible for me to visit in PARIS here, the Chemical firm of "PESHINET" (phonetic) (Pechiney Cie. de Produits Chem. et Electro-Metallurg. 23 rue Balzac, PARIS 8e).

5. S.: By the way the representative of the GVF (Civil Aviation) in PARIS is a GRU officer whose name is Vladimir Ivanovich ZEMLYANSKIY (identified in U.S. Embassy photo series No. 222). He is a Lt. Col. of Aviation. He is the stout one I referred to and he was also present at the operational meeting. At that time I could not remember his name, but today since I have already got my Air France ticket, I was able to meet him. We also saw his photograph in the earlier pictures (British set).

6. S.: Let me get back to my arrangements with [redacted]. Therefore I will have three trips, one with the delegation and two with SOLOVYEV. He also showed me brochures, three of which were on Nimonics with new descriptions and I asked him to save these for me until he has collected them all, before I picked them up, and he agreed. [redacted] will also drop in to see me at 0800 tomorrow at my hotel, just in order to tell me when I should get in touch with him later in the day after I return from my trip with the delegation in order to find out from him how the other arrangements have been scheduled. He was very nice to me and has invited me for lunch, which may be on one of these days. After I met him today and made my requests, he already had arranged everything for tomorrow and advised me thereof by a phone call at 1700 hours. I told the delegation and they were most pleased that I was able to arrange this, since they could get nothing like this out of DUDIN of INTOURIST (KGB). G.: Why are you involved in arranging the trips for the delegation ? S.: Because this delegation has been sent here under our Committee auspices and as a representative of our Committee here and on visits of a technical nature it is up to me to make the arrangements even

though /

though you correctly said that they already have a general tourist-type itinerary planned for them. This is an additional visit which is superimposed on their itinerary which has been completely laid out otherwise. I try to fill in their free time that they have between tourist-type visits with arrangements to visit places of technical interest to the Committee. I am responsible for any of those on this list of 89 who may be sent here, thus far only these nine have come. No others will come. G.: What about the cable that stated twenty others will come ? S.: That was changed; they will not come. Probably that is for reasons of economy, but in addition the Exhibition has already closed. The other delegation members who are now here had a chance to visit the Exhibition several times. (Subject described HOOK's office and apparently was very much impressed by it).

7. S.: I thank you all very much for all your efforts, for arranging all this with [redacted] and this will solve my mission problems for the Committee since they will return to MOSCOW four days before I will and will report on this favourably. G.: And this will cover all of your Committee mission requirements ? S.: Yes, fully. G.: And the valuable documents will help you fulfil your GRU missions and the less valuable ones you will send to the Committee. S.: Yes, that is what I will do. I just want to mention again that it would be clearly valuable for me to have something from the Bagneux firm; I asked [redacted] about this too and he will try. That's all I have to report in respect to [redacted].

8. S.: Here is my Air France ticket; I am taking the 0800 flight on Sunday October 15 from Orly to PRAGUE and there I take a Soviet plane at 1155 hours and will be in MOSCOW at 1400 hours. That same night I can advise you by telephone with three rings as before of my safe arrival. My only request about the flight is that I must leave the hotel at 0600 hours to be at the Airport in plenty of time to get my baggage through, therefore please have WINNE get up at 0500 hours and arrange for both him and myself to be awakened then so we can meet this schedule. (Subject was assured that the

hotel /

hotel could wake them up on time and we would make sure that WYNNE would be available on time). S.: When is WYNNE coming ? It would be well if he could get here on Monday or Tuesday. H.: He is just arriving in LONDON today and he will probably not get here before Tuesday. S.: Maybe WYNNE could go on one of the trips with me. G.: Absolutely not. Keep WYNNE as a source for one set of documents, and [redacted] competely separate as your other source. WYNNE must not get mixed up with [redacted] in any way; he has already served his purpose as the contact man for you to meet [redacted] and this legend has in fact taken place and now WYNNE must be kept competely apart. S.: Very well, if you say it should not be done we won't do it.

9. S.: I had lunch at the Embassy yesterday with GRIGORIYEV and with PROKHOROV and I found out that GRIGORIYEV has an acquaintance who is a chemist and who has given him some samples of some steel corrosion preventative. It is applied something like a paint. The man works in the Pechiney firm, but I do not say that he is an agent, he may be only a good personal friend, he did not give me his name. Everything is well at the Embassy and nobody says anything whatsoever about the BERLIN situation. It is entirely quiet, but they are careful about going around in town and are doing so more rarely. G.: You were at the Embassy for the past three days now, was there anything new that you overheard of interest at all ? S.: I go to the Embassy every day and sometimes I drop in several times. Yesterday I was at the Exhibition watching how they were dismantling it.

10. G.: What about this banquet that you mentioned would take place on the 3rd after the closing ? S.: That was a farce; they are so stingy. I arrived there late, about 2130 hours, there were hardly any people there and in general few attended the Exhibition with the exception of Sundays. In all about 850,000 visitors attended the Exhibition, but in MOSCOW over two million visited the French Exhibition. I had to laugh, prior to the closing of the Exhibition our specialists sold some fifty expensive cameras

to /

to the French, but they were brought back and refused as being inadequate. Instead of an elaborate banquet and the giving of awards both monetary and in gifts to the people who worked so hard, all they received was an expression of thanks and they were shown an Italian film. There were hardly any people from the Embassy there. As a matter of fact some 500 French workers came to begin the dismantling and made all kinds of noise while the film was going on, so I left the place in disgust.

11. H.: Did you call this French lady, Marie-Paulle (Marie-Paulle Lachaux) ? S.: Yes, I did and I made an appointment with her to take her out tomorrow night. I invited her to the Lido and I would like Michael to make reservations for me in the name of Mr. ALEXANDER in the front row next to the stage. G.: Just go to the box office and ask for the tickets for Mr. ALEXANDER and you will see that all has been reserved for you; you do not need to tell the lady what name you are using.

12. G.: Now, about Sunday, it appears that that will be the day we should meet in order to review the results of the trip [redacted] has arranged and the plans he is setting up for you for the following week. That will be the earliest day we can meet since the next two evenings you will be mixed up with - excuse the expression - "other diversions". S.: Fine. At what time shall we meet on Sunday ? G.: At 2000 hours. That is a very good time and we will do this at the footbridge. S.: That's fine. That is an excellent place. The other place, where I came today is very good too. When I was walking up the stairs, there was nobody around (he thought). Next week we should meet more often since we have many things to discuss and to refine and if there are repetitions, what of it ? G.: We will see how things work out with respect to your travel schedule and we can plan more exactly next Sunday.

13. G.: You say you haven't heard one word about the BERLIN situation at the Embassy ? S.: It seems that they are tired of speculating on it and I get the impression that everyone is waiting. They are all listening to the radio and reading French newspapers carefully. They mentioned in the French paper 'Figaro' that in a soccer match in the Caucasus an uncontrolled fight began between a Georgian and an Armenian team and it became so uncontrolled

that they had to stop the game. G.: Aren't there missions to report on what the French attitude is towards the BERLIN crisis ? S.: I'll be able to tell you more about this later because I have a scheduled lunch with both the Rezident and ANANYEV and if they have a few drinks at this time maybe I can find something out. I'm glad that you asked me these things because it will help me direct the conversation. G.: Also it would be of interest to know if there are any directives with respect to any action on the Algerian-French difficulties, possibly such directives could involve what the French Communists should do. J.: If by chance you should go to the Rezident's house should he invite you there, try to notice who else lives in that house, on what floors and on what side of the house. S.: Very well I will certainly remember this, but of course I do not know whether I will be invited there or to the Torgpredstvo Dining Room.

(14.) G.: Now we have here for this evening's programme additional questions on our agenda and an album of photographs to look over; what shall we begin with ? H.: We may as well start with the questions, but I would like first to ask him to clarify two items which he has asked us to purchase for him. We'd like to know what those fifteen and thirty volt batteries he ordered were for so that we can determine the size because they come in various sizes. S.: They should be the very smallest sizes made but of the voltage I asked for. What they are for is this. LEVIN has a tiny tape-recorder and the batteries to fit into it are cylindrical and small. It is an agent-type recorder set, it is a wire recorder. Three little batteries fit into it; the other types are the square shaped batteries of exactly the same type you have given us before. Indidentally others always ask for small batteries for Japanese type transistor sets. The Japanese have brought in very many of their type sets. Little transistors are a typical kind of Japanese gift which they give to their contacts in trade dealings. There are also Soviet transistors but they are low grade. G.: The other question is about the battery operated razors. We're having trouble with this for the

very /

very good reason that many companies are discontinuing manufacturing them since the batteries become weak very rapidly. At first they work fine, but very quickly the battery power drops. However, we have a way of solving this problem by obtaining spring wound mechanical razors. All one needs to do is to keep it wound tight and it will work well indefinitely. This spares the necessity of always trying to replace worn out batteries. S.: I saw these once and I think that these would be very good, and as a matter of fact though I have heard about them I was afraid to ask you because I thought that I might be asking for too much. G.: That is just fine and if anyone argues with you you can simply say "look fool, this does not need batteries it is more modern than the others and it can always be wound up". S.: Of course that's fine and I will explain this except that I can't say "Look, you fool" to the Minister of Defence, since he is going to be one of those to receive it, as well as RUDNEV and SEROV. H.: That's fine, George, let's go on to the questions.

15. G.: In reference to rockets, when you consider the large ones such as the R-2, which has a long range, of what use do the Soviets consider it worthwhile to use conventional warheads on these rockets since a great expense is involved in the construction of these missiles and a small error off the target would make their effect worthless. S.: I understand your question perfectly. When you mention the R-2, first of all let me state that they have produced a large quantity of these rockets. It would be wasteful to scrap these so that they are now held in reserve. In addition many conventional type warheads have been already manufactured for these rockets. In addition they still consider that within the allowable lateral and range deviations for these rockets, the TNT equivalent conventional warhead would still effect a considerable area of destruction. In addition to this, when you consider that a war may break out in which nuclear weapons are not used, at least at the outset, these available rockets would be very necessary. As I remember from my studies, the parameters of error within which these rockets operate

can /

can still be effective. Of course, all types of rockets are equipped to carry atomic warheads and these are the ones whose ranges are used to determine how far an atom warhead can be delivered. Since the conventional warheads consist of TNT which is poured in like a solid mass of honey and are heavier, their corresponding ranges for each type of rocket are greater than if they carried an atomic charge. It is not feasible for technical reasons to balance the load of the atomic warhead with additional heavy material such as lead, therefore the ranges are smaller.

16. G.: Tell me how long has FEDEROV been in command of his missile brigade at WEISSENFELS in the D.D.R? S.: FEDEROV was assigned there last year in 1960, I would say in the late summer and he has been there more than a year now. G.: Was this brigade there before he was assigned to it ? S.: Yes, it was. G.: How long did it exist before he came there ? S.: Before he came there was a previous commander and he had trouble with the former deputy because the latter had aspired to be the Brigade Commander whereas FEDEROV simply came in from MOSCOW and was given the job. G.: How long do you say the Brigade has been there before FEDEROV took over its command ? S.: I would say this that all the four Brigades which are there have been there for now two years. Of course one may have been deployed there earlier and then the others followed so that the first one would have been there two years and the last one say a year and a half.

17. G.: What is the table of organisation rank for a commander of such a brigade ? S.: They can be Colonels or Major-Generals. If a Colonel does particularly well he can be promoted to a Major-General since that is the Table of Organisations slot. Now there are two Colonels there and two Generals; FEDEROV is a Colonel and I have given you the name of one Major-General who is a missile brigade commander, his name is Gen. Maior VINOGRADOV. Since you mention FEDEROV, I want to stress to you that FEDEROV could be of tremendous value to me if he were transferred back to MOSCOW. His wife is

. constantly /

constantly bombarding my wife, VARENTSOV and myself to get her husband transferred to MOSCOW. She cannot go to the D.D.R. since she was sent out together with their abnormal son who got himself into trouble in the D.D.R. and was declared persona non grata. All of FEDEROV's personal difficulties there were in the line of personal transgressions but were not sufficient to have him removed for official incompetence. VARENTSOV would always give him a job because he was his former Adjutant and he is very fond of him even more so than BUZINOV. (Subject stresses that although he himself is one of VARENTSOV's favourites due to long years of friendship, he still also likes FEDEROV very much and FEDEROV would be a first-rate source of information for subject since not only did they get along very well but FEDEROV is in subject's debt for past favours to a great degree. Subject goes on to explain how he had a large party at his house just before he came and to which General POZOVNYY came as well as BUZINOV and other Colonels from GRU. Much classified information can come from such conversations and again subject stressed that he could get anything out of FEDEROV and BUZINOV, particularly when either of those two are drinking with subject).

(18.) G.: Have any long range aviation units been converted to or replaced by missile units ? S.: For a long time now in the Soviet Union the number of long range aviation units has always been small. There never was a programme to make large numbers of long-range aircraft, but the units which did exist were always retained. There were improvements made in the types, and newer types replaced the old, but the numbers were always relatively small. This long-range aviation of course is capable of delivering atomic bombs but it will require adequate air cover, our fighters will not be able to give it very long range protection because their own ranges will be limited. The crew of these bombers is sizeable, it runs from twelve to fifteen men, but it has considerable fire protection of its own with many multiple turrets and also carries rockets. These rockets are air-to-air types. I heard about all this from POZOVNYY, from whom I can easily get information since he is very friendly to me and tells me everything. After all he was in the PVO and was a deputy to BIRYUZOV. He attended all military conferences regarding PVO.

#38

19. S.: He has all kinds of personal contacts even now with Generals, such as Gen. Lieut. PETUKHOV, who is an aviation General who also lives near POZOVNYY in the SOKOL'NIKI area. PETUKHOV is still serving in PVO and these two meet often. Another good friend of his is Gen. Lieut. MITEL'KOV. He is the Commander of an Air Army near MOSCOW which is subordinate to PVO. The Divisions which compose this Army are all an integral part of the PVO of the Land. (Subject related a long-winded story about the background of MITEL'KOV). He is a widower and his wife who was deaf died in 1958. Upon returning from Turkey I celebrated New Year's Eve at POZOVNYY's on the year ending 1956 going on 1957. Four years later again on New Year's Eve I was at POZOVNYY's. This time POZOVNYY did not invite MITEL'KOV, but at three o'clock in the morning quite drunk, in came MITEL'KOV with a good looking woman. This lady, whom he introduced as his fiancee, is the Director of the Generals' store in MOSCOW which belongs to the Military Council of the Ministry of Defence. Her name is Anya MARTYNOVA; she was my old girl-friend. I knew her years ago and, oh well, she was my girl friend, but I didn't marry her. I pretended not to know her although we are good old friends and she was loaded with diamonds, since anyone who is a Director of a Generals' store always steals, grafts and gets things others do not, and she was no exception. After she was divorced from MARTYNOV, and she has a grown son now attending the Baumann Institute, she married Hero of the Soviet Union SOBOLEV, who was killed while making a test flight in the latest fighter craft when its canopy flew off. This happened in LENINGRAD but he was buried in MOSCOW in Novodevichiy cemetry. Now that she is a widow, General MITEL'KOV wants to marry her. Excuse me for deviating from my thought.

20. G.: In other words you mean that the missile units did not replace long range aviation units. S.: No. No. Under no circumstances. Although the fleet and other civilian enterprises were cut down in a budgetary sense in favour of rockets and their increased production, the Air Force was not touched and though small it remained as it was, that is the long range aviation.

21. /

#38

21. G.: Did VARENTSOV ever have arguments with the long range aviation people or the Soviet Air Force ? S.: Yes he did but this was all on a basis of fighting for a greater budgetary appropriation, but this is also true of the arguments he had with ROTMISTROV and the tank people; and in fact he still does have arguments but it is all over money. MOSKALENKO also has arguments with them for the same reason. In fact Sergei Sergeievich told me that he often argued with them in the presence of KHRUSHCHEV and the Central Committee on budgetary matters and KOZLOV, BREZHNEV and also MIKOYAN were present.

22. G.: Do you know what is the exact nomenclature or title and who is the chief of the Directorate of GRAU which actually accepts the missiles from the plants and serves as customer for the Defence industry ? S.: GRAU has some twelve or fourteen directorates therein. GRAU has a Central Research group which is involved with NII work. All of the Directorates are numbered but I can't tell you what the numbers are. They also have a specific designation. One may be concerned exclusively with optical instruments, another exclusively with artillery bases. Still another may be concerned with rocket material as such and under this they would have otdels. The exact title of the Directorate that you refer to I do not know but there certainly is one just as you asked about. There is also a Directorate exclusively for warheads. Frankly I know the internal organisation of GRAU very poorly; I need an informant who is employed in that headquarters to get this information. I am sure that BUZINOV and FEDEROV know, but I never chanced upon a conversation about GRAU with them.

23. G.: In the Artilleriyskiy Sbornik there are 8 K 11 and 8 A 61 missiles mentioned. Does this mean that the 8 K 11 missile and the 8 A 11 missile is with an atomic warhead ? (After considerable discussion and re-questioning the following summation was reached. The 8 A 11 and the 8 K 11 designations mean that they are atomic warheads. Designations such as the 8 A 61 are designations for rockets with conventional warheads. However it is possible that a rocket designated R-11 with the suffix changed to R-11 - A would mean an atomic warhead. Subject added that the

designation /

designation A or K made no difference with respect to their both being atomic warheads. Their difference is their atomic yields so long as the 11 is behind them in the designation).

24. G.: Do you know the names of any other Central Committee Department heads besides TYASKO for Light Industry, whom you mentioned before ? S.: The last document that I photographed for you which involved the listing of Government leaders beginning with KHRUSHCHEV, that was the very last information on this subject. G.: You don't remember any from memory ? S.: No. You should refer to this directory.

25. G.: Who in the Central Committee in the so-called Military Section is the one that controls GRU ? S.: There is no such section which controls exclusively GRU. There is a military section (otdel) of the Central Committee of CPSU and to be more specific and not to call it military, because the Central Committee is squeamish about using that term, it is officially called the Administrative Section. It is the same thing. There is a group of officers therein who are concerned with the General Staff of the Ministry of Defence and with the Ministry of Defence as a whole. I named an officer there earlier who is concerned with GRAU, a Colonel whose name I gave you. There are two officers now who are concerned with GRU, and I gave you their names. G.: Do they control GRU at all levels ? S.: Yes, they have the kremlevka and they can simply call SEROV at any time. I just remembered the name of one, Aviation Colonel CHIRKUNOV. This is the first section or the Military Section of the Central Committee of the CPSU and the second section is the main political section of the CC of the CPSU. Thus the Central Committee with these two powerful tentacles, controls the entire armed forces in the U.S.S.R.

26. G.: Now, they sent out to all groups of forces and military districts high ranking Generals who are members of the Military Council. I remember one such representative was a Lt. Gen. in the GSFG in Germany. He is the representative of the Central Committee in Germany and he sits right next to the Commander in Chief of the GSFG. S.: He is a member of

the Military Council and reports to the Central Committee. G.: But certainly he cannot be with his rank subordinate to the Colonels you mentioned above ? S.: There is no subordination here whatsoever. A member of the Central Committee is all-powerful. SEROV speaks to Colonel CHIRKUNOV of the Central Committee by name and patronymic. After all CHIRKUNOV does not express his own personal views, he may be expressing the views or decisions of some Secretariat of the Central Committee. G.: But these members of the Military Council then must all sit somewhere in the Central Committee and there must be a pretty large number of them. S.: There certainly are but it makes no difference where they sit and rank is meaningless, they often go around in civilian dress. After all my father-in-law, General ~~GAPANOVICH was also a~~ member of the Military Council. There is a first member of the Military Council and he is appointed by the Central Committee. He sends out the people you just referred to to all of the military districts and to the groups of forces. These people are the soul of the political control over the Army and they report on everything that goes on in the Command they are assigned to with respect to how the command is exercised, personal habits of the Commanding Officer and his staff, etc. etc. They also report on the state of training of the troops and on their morale and on their discipline. Many of these people have no military background, but recently there are more and more who do have.

(A short pause was made to change reels).

27. G.: When did the first five-year class graduate from the missile course at the Dzerzhinskiy Academy ? S.: First of all the course is actually $5\frac{1}{2}$ years by the time the stazhirovka is included and they hand one his diploma. It is referred to of course as a Five Year Course. I would say that the first class graduated in 1959.

28. G.: You mentioned a Military Academy of Sciences and a Civilian Academy. Are these formal titles or just a way of referring to those with military functions ? S.: These are two different academies of course with different missions and with different Chiefs and Deputies. G.: But are those titles correct ? S.: Yes, they are. In recent years there has been a change, now there are a number of separate NIIs such as the one in GRAU,

which /

which in the past have been all joined under the Academy of Military Science. These NIIs now are subordinated to the respective combat arm which they serve. Although the Academy exists it is not the all-inclusive body it had been. Its functions have been considerably changed. G.: Surely some of the "military" academies also have some civilian work ? Or does the "military" academy include only military NIIs, laboratories and so forth ? S.: Their relationship is close-first of all the instructors have been taken from civilian academies . After all, all of the basic principles stem from chemistry, physics, electronics, etc. even though applied for military purposes they are actually from civilian sources. G.: Would the Military Academies also have civilian work ? S.: No. It would be the other way round, the civilian institutes would work for the military. The civilian institutions are more numerous, more developed and better equipped than the military, for example in the Academy of Sciences of the USSR there are five GRU officers who are assigned there just like I am to the Committee. The Academy of Sciences also has what we call a Top Secret Sector which co-ordinates Top Secret matters which are concerned with every phase of interest to the military. The point I want to stress is that there is a very close co-ordination between the Academy of Sciences and military-scientific institutes.

29. J.: Is this sector listed in that Academy of Sciences directory by that name or by a cover name ? S.: No. That is Top Secret. For example in the section of the directory under mathematical sciences you know that there are some people who work for the Eighth Otdel with respect to development of codes. I told you about this in detail last spring, but the individual mathematician would not be listed under any such category. Often specialists are called out of the Academy and requested to run some project or other for the military, they may be even called before the Supreme Military Council. When this happens they are given the people and facilities to assist them and they simply do not exist in the Academy of

Sciences /

Sciences during the period when their services are required by the military. G.: Therefore your military institutes would have many civilian specialists as well as military specialists ? S.: Yes, they certainly do. G.: Therefore this Academy of Sciences directory would contain civilian and military scientists. S.: Of course it does and Harold very correctly said that the Kremlevka telephone directory should be compared with the Academy of Sciences directory to determine who the top scientists and designers are in vital Soviet scientific and military programmes. At least that will cover everything of importance in MOSCOW, but remember that there is a branch of the Academy of Science even in Siberia, and these people also work for the Army. There was a section in the Academy of Sciences directory which listed these people and gave the address of the Academy in NOVOSIBIRSK.

30. G.: Remember you mentioned that there are missile polygons in the Ukraine, specifically in NIKOLAYEV and SHKLO YAUR, which can fire into Poland and Rumania. Is it possible that these are just testing sites for troop training and not actual missile sites from where combat missiles would be launched ? S.: This is a good question. If you took NOVAYA ZEMLYA as an example, where PYRSKIY has been conducting the tests and these should be completed pretty soon since he must be back in MOSCOW in October, it is quite possible that the sites from which rocket testing was conducted will not be the sites from which rockets would be launched in case of war. But there at NOVAYA ZEMLYA there are other excellent sites for storing nuclear warheads and where missile sites in case of war are established. Similarly those two locations in the Ukraine are sites from which rockets are aimed towards the West in training exercises, but they may not be at all the actual combat sites against the West in case of war. Right now they are suitable for covering the targets, namely Poland and Rumania, in the event that it would be necessary to deliver via there. Whenever a huge site like these is developed it obviously requires all kinds of construction work including housing for

personnel /

personnel, adequate storage installations and all kinds of other auxiliary construction. This would never be abandoned, not only because it can be used for continuous training but because since it is completely tied in geodetically it can be used as a site for actual rocket firing against the enemy if the need arose. Of course, when hostile intelligence has the place pinpointed, they may displace equipment and personnel away from the immediate vicinity, but still close enough to use it. Therefore we must consider that all these sites like KAPUSTIN YaR, these two in the Ukraine and the ones in the north can all be used to launch actual combat missiles when necessary. Of course many missile sites which can be called firing positions are also being constructed and rocket troops would come there to use these prepared sites for firing in case of war. Much work must be done on these sites since launching pads require all kinds of preparation.

31. G.: Are there foreign observers at the current series of nuclear tests, such as Chinese, Bulgarians or for that matter any satellites ?
S.: No. No foreigners are permitted at our nuclear tests. I speak only about atomic tests because they do have representatives from the satellite countries at rocket launching tests. Only Soviet military people and scientists are at the atomic tests. The high officials of satellite countries are told that the tests are going on but there is some degree of distrust so that the representatives are not permitted to be there. At one time there were officers from satellite countries at the Dzerzhinskiy Academy, at least attending some of the faculties but now this has all been stopped. As I remember the VAK there, there was a foreign faculty, but since that time for the last two and a half years the Academy has become far more of a security type institution.

32. G.: Have you ever heard what the opinion of any senior officers is on the Chinese nuclear weapons programme and what is the opinion from any source as to when the Chinese will have such weapons ? S.: I have had interest in this matter and up to today all the Chinese have are various installations for making fissionable materials and for testing them. The

Chinese /

Chinese scientists are striving to develop the production of fissionable materials and to produce them in more concentrated form but up to now they do not have a nuclear bomb. I asked Sergei Sergeievich about this, particularly after he had returned from Korea and China. He told me that they do not have any bombs yet and if they need atomic weapons then we would give it to them. The way I see it from a strategic viewpoint, if there is a threat on that flank, I think that we would simply send our own units into China to support them with nuclear weapons. However, up to now we have not given them any. G.: How soon do you think the Chinese will have their own nuclear weapons ? S.: I think that in two or three years they will have their own nuclear weapons. They are working very intensively on this; the Chinese do not have large quantities of raw material, they do not have any monazite sands, Czechoslovakia has more and we get this material from them. Although the Chinese do not have any completed atomic weapons, they do have many samples and quite a number of laboratories in which they are working on this problem constantly. The Central Committee is concerned that the Chinese will accomplish this in very short time. China has turned off on its own independant path with respect to many questions already. At the 12th anniversary in China, no prominent Soviets went down. The only one who went was PROKHOROV who is the Chairman of the Supreme Soviet of the RSFSR together with a group of five insignificant officials. At the big party the Chinese gave in MOSCOW, KHRUSHCHEV did not attend.

(33.) G.: Since you mention KHRUSHCHEV, have you heard anything about his health lately ? S.: As a whole I would say his state of health is not very good. He tires easily and his heart is not too good. This was mentioned by CHURAYEV during VARENTSOV's party. He is being closely watched by his doctors and controlled medically. He goes for vacations to rest quite a few times a year. They check his health every day and watch his diet and with this kind of care it is quite possible he will survive another ten years.

(34.) G.: Getting back to FEDEROV for a moment, when he speaks to you about

the /

the rockets in his brigade, does he refer to them by "R" numbers or by "A" designations or in any other cover terms ? S.: When he speaks alone to me he simply refers to rockets by the "R" numbers. BUZINOV does also because we are all close personal friends. G.: How will he refer to them in VARENTSOV's office ? S.: To VARENTSOV personally he would still speak of the "R"s, but in strange offices he would speak of index numbers or call a rocket an "izdeliye" As I told you, at the Academy reference to "R" numbers is forbidden. Incidentally although BUZINOV drinks a lot when he visits with me he watches his step regarding classified conversation when a person he does not know well is present. I noticed this when I was invited to Colonel Peter GANICHEV who was a deputy to the Rezident in India and for whom I got an apartment in MOSCOW. BUZINOV went with me and ZASORIN was also there. We drank a lot that night and I had trouble getting BUZINOV home, there were no taxis and I gave 20 roubles in old money to the driver of a garbage truck to take BUZINOV home. On the next day, a Sunday, at 11 o'clock was when your man called me on the telephone. I did not understand a damn thing and he called at the wrong time and I did realise the call was from you, but I understood nothing that the man rattled off. He said something about waiting and then "bye-bye". I was not in the best of shape myself but I was not drunk because I never drink too much, but I could not understand a thing.

35. G.: In a combat operation what does the term "osnovnyye napravlenie" mean - what are these "napravlenii" in the European theatre, or do they vary according to the situation ? S.: In a theatre of military operations there may be one "osnovnoye" direction or there may be several. This was particularly true during World War II when our armies were still within the territories of the USSR. On the basis of these several basic directions fronts were organised, such as the First, Second, Third and Fourth Ukrainian Fronts, etc. These are often described as compass directions such as South East, North West or Central. Many factors are tied in to determine these directions, such as the major network of highways and rail lines, the main concentrations of

enemy /

enemy forces. Now the main direction is considered to be the BERLIN direction. It is really an operational-strategic concept, for example beginning from the main base of the ten armies facing West Germany, the main direction is called the BERLIN direction. In case of hostilities additional directions may be designated along the flanks of the main direction. These auxiliary directions may be temporary or fixed depending on the course of battle. G.: Would you consider the BERLIN direction as the main axis of attack which actually extends westward beyond BERLIN. S.: Yes. It would be both an operational as well as a strategic direction and BERLIN will in effect be an intermediate point, not the ultimate objective and the direction will extend all the way to the Channel.

36. G.: Do you know of any practical results of the Voyennaya Myal articles, that is actions that have been taken following their having been recommended in the sbornik ? S.: Of course, when these articles get to the Army commanders or even lower these are fundamental concepts on the basis of which troops are trained. H.: But you get a lot of disagreements;for example ROTMISTROV says this and ZHADOV says that and then there are criticisms. S.: These discussions must be considered as a step forward. First let us take the Field Service regulations of 1959. Here the general principles are laid down for various forms of combat under various conditions. In addition under conditions where weapons of mass destruction are deployed, new circumstances must be considered. However, there is no article in the sbornik which contradicts the Field Service Regulations. The articles represent the development of narrow or rigid concepts as expressed in the Field Service Regulations into much broader concepts since the course of battle may find circumstances of a special nature not possible to cover fully in the Field Service Regulations. Therefore these articles serve the Commanders as supplementary material to assist them in their training programmes. The Commander who gets these articles will take the appropriate reference to his own specific training programme and on the basis of this information will write up his own lectures and instructions for troop training. His

subordinates /

#38

subordinates may not even know that he has used the material in the articles in the instructions which come from him and assume that it reflects his own thinking, especially since they may not have access to these articles. The articles are an expansion of the principles in the Field Service Regulations which take into account specific conditions. Therefore the articles must be considered as one of the fundamental and up to date supplementary guides for all the armed forces in the USSR. New articles continuously bring up to date the inclusion of new types of weapons and their military application. It is not possible to publish a new set of Field Service Regulations every year. Even when discussions from various viewpoints are brought together and summarised the best points made in each viewpoint are summarised and a common course of action is recommended which is a step forward.

37. G.: Take PLATONOV's article in the sbornik; he mentions the Krylataya Raketa (cruise-type) under Naval control along the coasts, for coastal defence. Do you know of such missile units - what missiles do they have and could it be that Naval officers at Dzerzhinskiy are training for these units ? S.: I have certainly heard of these. The Krylatka was taken from submarines and developed and improved for use with Ground Forces. The Krylatka is also used in coastal defence and these units are under the jurisdiction of the Navy. G.: Is this the improved P-5, now called the SP-5 ? S.: That is correct and the Naval officers do go to the Dzerzhinskiy Academy to study these missiles.

38. G.: Have either Sergei Sergeievich or BUZINOV ever mentioned that they are working closely with Naval, Air Force or PVO officers on missile research, testing or troop problems ? S.: Yes, they said so and they do work together because all of these have the same basic equipment. The only difference is that the missions designated for the rockets will suit the service concerned. At the Supreme Military Council at which KHRUSHCHEV presides all representatives of the various combat arms are present.

39. /

39. G.: When Sergei Sergeievich spoke of failures in the strategic missile programme, exactly what did he mean by failures ? S.: He meant that there was insufficient trained personnel and that the electronic equipment was not fully developed. G.: You did mention this before, I thought there might have been still another kind of failure he may have referred to.

40. G.: Sputniks are launched and strategic missiles are tested at a place one thousand kilometres east of KAPUSTIN YaR. Have you ever heard Sergei Sergeievich or BUZINOV mention the existence of this polygon, which fires into the Pacific ? S.: I spoke to you about this, but I could not give you its co-ordinated position since I could not find this out. There is such a polygon and it is referred to as the one in Central Asia. There is even an impact area there to which they fire from KAPUSTIN YaR. G: And do they fire into the Pacific from this base too ? S.: Yes, they do.

41. G.: In the NEDELIN accident, what were the exact words used by the engineer to tell you that the first stage of the missile was propelled by nuclear energy ? S.: The way this was written up was that this rocket has been filled with a new type of fuel, using fissionable material in its propulsion mechanism. G.: Could it be said that this was nuclear assisted, boosted as it were ? S.: He said that it was a two-stage rocket and that the first stage when activated did not work properly and following the specific time interval which had elapsed without the rocket having left the launching pad and at which point no further movement should have taken place, all safety valves should have automatically closed. At that time NEDELIN and his party all came out of their safety shelters and suddenly the second stage ignited and exploded. G.: Is it possible that the second stage could have been atomic energy powered, or possibly both of the stages ? S.: No. Only one stage was so powered and it was the first stage. Both stages have fuel but the first stage was the one with nuclear power, but the second stage ignited.

42. /

(42) G.: When you say that the R-11, R-2 and R-1 are two-stage, what do you mean ? S.: I mean that Soviet science has taken the line that rockets should have two stages including the Krylatka and the V-75. In early tests there were three-stage rockets, but it has been decided that two-stage rockets are sufficient to accomplish the desired mission and they are easier to guide than three-stage rockets.

(43.) G.: Why aren't there any sbornik articles on strategic missiles ? S.: Articles on strategic missiles are placed in a special exclusive Top Secret Bulletin by MOSKALENKO and his officers. Of course they also get the sbornik themselves, but they do not write articles to place in the sbornik. I have not yet seen the third issue of the sbornik, but thus far I have seen no articles on strategic missiles. G.: What would the reason for this be ? S.: It is just an additional Top Secret security precaution and some of the recipients of the sbornik would not be concerned with strategic missiles. It would be none of their business.

(44.) G.: Have there been missile exercises in the Caucasus this year ? S.: You mean in which rockets were used? G.: Yes. S.: There were such exercises this year and VARENTSOV was there.

(45.) G.: Do you know how long a missile can be held after it is fuelled before it must be launched ? S.: I understand and every rocket has its own particular maximum time limit. They have developed a type of interior coating for the fuel chambers which permits the fuel to be retained in the rocket for a longer period of time, but to a certain extent no matter how you try to bottle up the liquid fuel it manages to leak and vapourise to some extent. This will vary for every type of rocket.

(46.) G.: Are the 3R2, 3R3, and 3R7 being developed further ? S.: Yes, they are constantly trying to perfect them. G.: Are their mounts amphibious ? S.: Of course they are. I told you that they were mounted on the chassis of the amphibious tank PT76. However, it is not recommended that they make a river crossing while the rocket is mounted on the chassis. The rocket should

be /

be taken across by other means while the tank chassis crosses itself. However there have been manoeuvres in which these carriers crossed a water barrier carrying one rocket.

47. G.: Can the atomic cannon also have conventional shells as well as nuclear ? S.: Yes it can and why shouldn't it, since the barrel is rifled ? It can fire either type of shell. G.: And are such cannons in the GSFG already ? S.: Yes, they are.

48. G.: Here is the last question. What would be the true unit designation of FEDEROV's brigade ? Could it be called by a prefix number, say 370, and then TRA brigade ? S.: That sounds very much like it. It could be called that. As a matter of fact since it is a secret designation he did mention it to me once and I couldn't quite remember it, but I do have his military unit FPO number, which I gave you.

49. G.: These are all the questions which we are going to take up today. We have more and we are going to work in still more for the next meetings. S.: I am ready to keep working. G.: Don't worry, we have the photographs for you to identify yet.

(J. showed subject a photo album of Soviet personalities in PARIS from the U.S. Embassy and subject had the following remarks to make about the persons he spotted as follows:-)

50. No. 5 This woman is from the Embassy and she worked at the Exhibition. I do not know what she does but she said that she has been here for four years already and that she wants to go home. (No. 5 was listed as Avianatta ANISENKO). She was working at the "INTOURIST" stand and knows French well. She and her husband, whom I did not see, will go home in a year. (He is listed as Mikhail ANISENKO).

51. No. 19 Here is a GRU officer. We have run across his photo before. He was also at the operational meeting but I do not remember his name. (No. 19 listed as Aleksey CHEREMUCHKIN).

52. /

52. No. 21 Please look up his name. I have seen him. G.: It is Vladimir DACHKEVICH. S.: It should be DASHKEVICH. He is a KGB officer. I have seen him in the KGB offices.

53. No. 32 Here is GRIGORIYEV and his wife. I told you that she had been an instructor at the MDA and was older than he. (Listed as Valentin and Maria GRIGORIYEV).

54. No. 35 This officer is not here in PARIS now. He has just become a Colonel and he is in the Air Force. He is a GRU officer who had been the GVF representative here (Civil Aviation) and now he works under ROGOV as I do and is with the GVF in MOSCOW. (No. 35 not listed, probably because no longer in PARIS).

55. No. 37 A GRU officer. G.: What does he do ? S.: He is a code clerk or something like that, possibly with the rank of Captain. He had been here in PARIS before. (No. 37 not listed, probably for the same reason as above).

56. No. 57 (crossed out) For some reason this number is crossed out, but he is here, this is Colonel KUDRYAVTSEV, Ivan Pavlovich. (No. 57 listed as Anatoli KULAZHENKOV, whereas for No. 56 is listed Vladimir Petrovich KUDRYAVTSEV, who is the other KUDRYAVTSEV also in PARIS. Therefore the No. 57 crossed out must obviously be a different number, which is not listed).

57. No. 56 This is a KGB officer (the corrected number would refer to the listing).

58. No. 63 A GRU officer. (Listed as Nil LENSKIY). We saw him before.

59. No. 62 This is a GRU officer who was at the operational meeting and we saw his face before. G.: That is LEBEDEV. S.: That's right. (Listed as Aleksei LEBEDEV).

60. No. 66 This is a low ranking man, a GRU code clerk (No. 66 not listed).

61. No. 93 Here is the Chief Book-keeper of the Embassy. I told you about him before. (Listed as Mikhail PETROV).

62. /

62. No. 90 A GRU officer. I don't know why the number is struck out. (No. 90 not listed).

63. No. 89 Here is a GRU officer who is now in PARIS. (Listed as Boris PANOV).

64. No. 129 A GRU officer. G.: This is SVERLOV. S.: That's right (listed as Vladimir SVERLOV).

65. No. 130 What is his name. G.: SVISTELNIKOV. S.: Yes. He is a KGB man but in the past he worked for GRU, then he went to the neighbours. There are many officers like that. (Listed as Paval SVISTELNIKOV). He graduated from our Academy.

66. No. 142 Here is the Ambassador. G.: That is right. (Listed as Sergei VINOGRADOV).

67. No. 157 Here is a number crossed out. He is our GRU officer. He is not in PARIS now. G.: It looks mis-spelled here, it is spelled ZAIKE. S.: It should be either ZAIKA or ZAIKIN. (Listed as Vladimir ZAIKE).

68. No. 160 A GRU officer. (Not listed).

69. No. 171 Here is a KGB officer. He is now here. G.: He must be an Armenian. S.: That is the one. (Listed as Nikita ENFANDZHIANTS).

70. No. 181 Here is the Rezident, isn't that right. G.: Yes. (Listed as Ivan CHEREDEYEV).

71. No. 182 Here is a KGB officer; I don't know his name. (Listed as Grigoriy CHOPOREV).

72. No. 184 Here is a GRU officer. His name is VOLKOV; he is not here now. (Listed as Gennadiy VOLKOV).

73. No. 222 Here is ZEMLYANSKIY, about whom I told you earlier. A GRU officer (Listed as Yevgeniy ZEMLYANSKIY). (Given above as Lt. Col. Vladimir Ivanovich ZEMLYANSKIY, Aviation Officer, now GVF representative, a GRU officer).

74. /

74. A packet of loose photographs was shown to subject and amongst these he identified one GRU officer, whose name is YEVLAMPIYEV.

75. This finished the photography and subject was asked if he had spotted where the code rooms were in the Embassy. S.: All the coding is done in that second floor wing that I told you about. G.: Where do the code clerks sit ? S.: They have their cabins in there but I haven't seen the rooms themselves. I see them running around there. G.: Can you identify them by face ? S.: Yes, I know them by face. J.: Does the KGB have their own code room and the GRU their own ? S.: Yes, of course they have their own, each one. G.: How about the M.I.D. code room ? S.: They have their own also, but I don't know where it is, possibly it is in an extension of this second floor, because everything there is so thoroughly equipped for security.

76. S.: You should prepare my mission assignments before I leave and review the old ones. G.: We have done most of this already and you may be sure that you will have a thorough review of this before you leave. S.: I think that I will be able to get hold of this four section manual to photograph during the time of my vacation, because, as I told you I will spend half of it in KISLOVODSK and the other half in MOSCOW. H.: How can you get hold of it. S.: That I can do from BUZINOV. He will get them for himself and sign for them. I won't even go to the Academy. I will tell him that I need them to write articles. FILIPPOVICH could even let me read them if I went to him at the Academy. I cannot go to their secret section and ask for it as I can in GRU. In GRU I would sign for it, but I cannot do so at the Academy since I am not registered there. Just like the case of the artillery journals. I asked BUZINOV to get them for me because I needed to study up on the material for some work that I am doing.

77. S.: These manuals are fairly large but I do have forty cassettes left and that should be good for about 2000 frames. This should last me for about three months. H.: Janet's husband has a re-supply. S.: When WYNNE comes of course he brings me bulky things, but cannot Janet hand me a packet

of /

//

of cigarettes ? H.: Yes. She can do this. S.: This solves the matter. My cassettes are in good shape and both of my Minox operate well. I use them both alternately. I almost always have a Minox in my pocket which is buttoned, but I don't always take spare cassettes, but the camera is loaded. There are certain targets of opportunity that I can take this way, for example the background data on KLOCHKO. I actually work on something or other every day, when I don't photograph I write up some terse notes at home.

78. G.: How do you stand with having completed the personal purchases you planned to make ? I ask this because it is going to be rough to throw this all on WINNE at the last minute if you still have a large number of items to get. S.: Don't worry, I will do all this myself. I have already got quite a number of things and I have visited all the places where I can get what I still lack. I know where they are. WINNE might take me to Versailles if it is not too far. I haven't been there yet. Neither have I seen de GAULLE's palace. H.: That is pretty far away, but Versailles is near. S.: I have seen most of the museums and I don't know how things will work out with this French girl I will see tomorrow. Maybe she will get some contacts for me and maybe I can go sightseeing in PARIS with her on Sunday.

79. (The matter of passing brochures by subject to his Embassy was discussed and he was advised that it would be better to wait until he had completed his trip with the delegation and possibly then receive some material from HOOK before he took anything to the Embassy). G.: In the meantime all you need to do is to report to the Embassy that you have established a good contact and certain things have been promised to you and when you get them you will bring them in.

80./

80. Regarding an acquaintance who subject could introduce to SOLOVYEV, subject was advised that the only way this could be done in a straight-forward fashion would be to meet the French people at the factory which subject and SOLOVYEV together would visit on the itinerary set up by HOOK. But anyone else would be insecure. Subject agreed to this. Subject again enquired if his information on the 230 re-deployed French planes was correct, but he was told that we had not yet found out, but was advised that if the information proved to be incorrect, it would not necessarily reflect on ZASORIN's reliability as subject's source, but the information could have been incorrect as reported by the French Communist source.

81. Subject now brought up his plea for both a translation of a Western military article which he could legend as having prepared himself and in addition a summary of a book which he would offer for consideration if sufficiently of interest to the Soviet agency concerned for complete translation and publication and for which subject would write a short preface in his own way, guided by the summary prepared by us. He was shown a recent issue of a very technical book on rockets and he saw how difficult it would be to understand, let alone translate such a book. After much discussion and repetition, subject stated that if within a year's time we could arrange to have both these requests fulfilled, it would solve his problem. He was told that we would do the best we could to accomplish this.

82. Subject left the safe apartment at 2400 hours and was delivered to the opposite side of the footbridge at RV 1 without incident by Roger and J. He walked a longer route home; this was more secure against chance observation by other Soviets.

MEETING NO. 40 - 10th OCTOBER, 1961.

1. Subject was picked up at RV No. 1 by M. and J. at 2000 hours while Roger provided surveillance cover. Subject arrived at the safe apartment at 2013 hours. S.: Yesterday and today I was at the Embassy twice on each day, both in the morning and the afternoon. They are extremely busy at the Embassy because all of the Embassy officers on the Ambassador's staff are writing their portion of the report to MOSCOW for the month since the Ambassador is going to MOSCOW in about two days and must take a full up-to-date report of the Embassy with him. He will report to MID and to whoever else he may be required to. During his absence he will be replaced by NIMSHCHINO who will arrive from MOSCOW in a day or two. The Ambassador will stay in the U.S.S.R. for a considerable time because he will also participate at the Party Congress and also possibly will attend the conferences afterwards. These conferences will be with the Heads of the Communist Parties from various countries. The Ambassadors to foreign countries do not always have personal contact with local Communists, but they certainly confer with the Heads of or representatives of the Heads of Communist Parties at conferences such as will be taking place now. This is in line with the guidance of "brotherly" Communist Parties.

2. S.: Yesterday I spoke to the Rezident and today I spoke both with the Rezident and with his Deputy. Yesterday the Rezident told me he was very busy due to the work he had to do in connection with the Ambassador's imminent departure and he asked me for a brief run-down of my own plans. I told him that I was trying to have two visits to factories of interest arranged and he said that that was fine and for me to do it in any way I saw fit but to include SOLOVYEV who has a solid cover in the Torgpredstvo just like KUDRYAVTSEV and has no acquaintances here yet since he has only been here three months. When he asked me how I planned to do this I said that we would meet people at the factories and I would introduce SOLOVYEV to the factory representatives and request that the factory representatives obtain brochures or other materials for me as the representative of the Committee of K.N.T. of the U.S.S.R. and send this to me via SOLOVYEV in the future. He said that that was fine and

that /

10

APPROVED FOR RELEASE
31 MAR 1992

that I should do it that way and that he had arranged for SOLOVYEV to accompany me to JUMONT and then he asked when this would be. I said in one, two or even three days and in addition we would visit a plant in PARIS. He urged that the plants selected be in the category of those which produce products on the target list of requirements and I said that I would try. He said "I can see that you are really trying and I also want to say that some of the brochures that you have brought are of considerable interest". I had already given them all that I have received to date and today we examined them, about which I will tell you in a moment. He then asked if he could help me in any way and I said that I would come in on Friday to submit my local accounting to him and to pass all the additional materials that I receive from my acquaintances and contacts and write up my report. I told him I would not come in to the Embassy on Saturday since they have a short working day anyway and there were a few purchases that I have to make for people back home. He said that would be perfectly all right and possibly I would need even more time to make my purchases.

(3.) Last night [redacted] called me at about 2015 hours and asked me to come to the office today at 1730 hours. I called you last night about 2200 hours and told you about this. I thought that he would have everything set up for me today and would tell me about it at 1730. This morning earlier when I was at the Embassy, SOLOVYEV and the Rezident asked me when the trip would take place and I told them that it is still being arranged and that it is complicated but may be I would find out later in the day and when I did I would advise him. KUDRYAVTSEV insisted that on the 12th of October at 1300 hours I should be free because he wanted to take me out to dinner at a restaurant. I may find things out from him and this will not take long. Similarly the Rezident and ANANYEV also want to invite me for lunch or dinner and this will probably take place on Friday.

(4.) They also asked me to be at the Embassy at 1500 hours so that we could all together examine all my brochures and divide up those portions

which /

which would go to GRU by Diplomatic Pouch and what would go to the Committee by "heavy mail". At that time we all sat together, that is the Rezident, KUDRYAVTSEV, ANANYEV and myself and all we did was to examine my materials. About one third was separated out for GRU. It was a big pile, about two kilograms in weight. [redacted]s material which was the sample and its description, three brochures on heat resisting steel and your material on electronics were included. Broohures from Bagneaux and Pechiney were all included in this. The balance for the Committee was wrapped up and KUDRYAVTSEV took it to his office to forward to the Committee. I told them there would be more and they said they would again examine it with me and again divide it up between GRU and the Committee as they did with this batch. They examined it for over an hour, very carefully and were quite satisfied, but requested me if possible to get a little more on Bagneaux and Pechiney since this material was of great interest.

5. One hour after I left I was with HOOK. I spoke for an hour with HOOK and he said very apologetically that he was unable to arrange any trips. He says that I could not go to JUMONT, since they would not receive me for a week and the plant that makes chemical equipment has its Director absent for some time and could not receive me. (Babcock and Wilcox). Neither could I go to the electronics plant in PARIS. The people in JUMONT said that prior to any trip there I should have had a letter written to the Foreign Affairs Ministry of France. I told HOOK that if he had told me that earlier I could have had a letter from our Embassy officially requesting this permission, but now it is too late since it would be 48 hours before they would read the letter and they would set up a visit for next week, whereas I must leave on Sunday. Evidently HOOK did not know that this was necessary and he had just found out. He has done a great deal and he feels very badly that he has been unable to make the arrangements he tried so hard to set up. His materials thus far are of no great value but he does promise to get me more. I cannot complain since HOOK has tried so hard, so I am glad that we are meeting now to decide what to do next. What is important for me now is to make only one visit somewhere, not two or three, and as far as other arrangements are concerned I can give them plausible reasons as to why they did not work out particularly with the postponement of the visit to JUMONT. My dear friends, all I need is one visit / 9

visit and some more brochures. G.: We already have the brochures, don't worry about that, and they are good ones, you will see them later. You can say they came from both HOOK and WYNNE. S.: My friends, I want to ask you if in some way through the Embassy of the United States or the Embassy of Great Britain a request could be made to a French firm to receive me as an official representative (of a Committee of the U.S.S.R.). I am not thinking clearly now since I just left HOOK, but see if you cannot get one visit arranged for me. Tomorrow is a lost day also because HOOK asked me to call him only at 1600 hours (Next meeting's transcript may show a different turn to this expected plan). I know he will try to do something all day tomorrow, and maybe by chance something will work out but that would leave only Thursday or Friday in which to make a visit. Tomorrow I must go to the Embassy again and give them some reason for the delay. This is the situation with respect to my trips and the work for the Committee. G.: Don't worry about the materials, you will have them.

6. S.: [redacted] also discussed with me the possibility of his taking a trip to the U.S.S.R. in December, January or February. I gave him advice about how to request his visa and what lectures to prepare, etc. He wrote everything down about the procedures that I recommended. J.: The only thing we can hope for at this late stage is that by some small miracle [redacted] can arrange one visit for you. On this I am sure that he is serious but let us face the fact that he is not dealing with the American public or the British public. For our Embassies to intercede would be the height of foolishness, since it would indicate to the French our interest in you, which would be dangerous. (G. translates). S.: I could have tried to make contacts through official channels, but the results would have been worthless in terms of what I would be shown, so I thought that through special connections which I see you do not have at your disposal, I could get to see such places where I would not be invited to go officially. J.: Another point is that you should not be too successful here. If you are they may decide to send you back to PARIS and this is the last place that we want to meet again. We want to meet in a place like LONDON or America, under conditions that we can control and not in a place where we have no control. G.: Remember there are French regulations here

as laid down by their Ministry of Foreign Affairs with respect to visits to French factories by Soviets. S.: [redacted] was trying hard but he is not experienced in these things. I could have gotten a letter a week ago as official as you would want it, but now it is out of the question because time is so short I now would not even mention this to the Embassy since the Ambassador is too busy to be seen, if shown such a letter for his signature would say that it is useless to send it now since I am leaving on Sunday and why was this not done earlier. At any rate if I could only have one visit and a maximum amount of material I could introduce SOLOVYEV quickly to wherever we visited and it would take care of the whole thing. G.: All [redacted] can do is to do his best, and that he will do. S.: One thing I do not understand is that if the Director of the Chemical Equipment Plant is away why could not his Deputy receive me ?

G.: Every firm has their own internal regulations.

7. S.: I believe that we should meet twice more before I leave. G.: Yes. On Thursday and on Saturday. S.: And let us try as hard as possible for [redacted] to make me an appointment to visit a firm, for say only an hour or an hour and a half on Thursday morning, and send a car to my hotel at 0900 hours. I asked him about this and I also told him that I would have a car for him in MOSCOW all the time. All his guide has to do is to take SOLOVYEV and myself to the firm and he can go, we can get back ourselves. This is all I have to report on this situation, I cannot add anything.

8. S.: Now let me check my notes to see if there is anything on other matters. I think I have reported everything. Tell me, was ZASORIN's information on the number of aircraft correct ? I must know this in order to have an idea on how to handle ZASORIN in the future. (Subject was reassured that ZASORIN's information was satisfactory and that he should continue to respect him as a reliable source because the number of planes committed in various categories was even greater than that reported and since no specific plane categories were given by ZASORIN it was impossible to determine what units it referred to).

9. S.: By the way ANANIEV told me yesterday that the KGB in PARIS are working full blast, with Communists in every walk of life. The GRU officers only approach those Communists who have had some military background or are

relatives /

relatives of such and only after they have had permission to do so. The KGB should be watched by our French friends.

10. S.: By the way we have been working now constantly for six months, out of which we have been meeting at close intervals like now for over two months. All: We are well aware of this. S.: All I wanted to say is that you have helped me to understand, you have guided me and I am very grateful for this attention to me on your part and on the part of your leaders. G.: We have planned to do just as you requested. On Thursday we will lay out the complete missions for you to accomplish in priority order, and you will copy them down. In addition we will review all aspects of the operational plan. On the last meeting on Saturday you will repeat to us the missions assigned to you to be sure that you understand everything and then we will simply relax and have a good time.

11. S.: I must also remind you again that I need a book from you of some sort with a brief summary description in Russian of its contents. This book must be of a type that the Soviets would be interested in having fully translated and published. In addition at a later date, I need a complete translation of a very serious and worthwhile military article based on documents which I can legend as coming from the material at GRU of which I have given you a list. (After a lengthy discussion explaining to subject how all this would take time, he was shown a book with the title 'Man and Space' which was borrowed from the Library of the U.S. Embassy and published in 1961. Subject was so delighted with this book, although it is quite elementary in a technical sense, that he insisted after still greater lengthy discussion that he wanted to take this book back with him and that by Saturday a summary in Russian be prepared for him. This summary he would re-work at home with appropriate political overtones and presentation and re-type it prior to submitting it to the officials who would decide if the book would be of value as a complete translation and publication. Toward this end the help of VARENTSOV would be available and subject felt strongly that this would support his legend for constantly requesting Soviet documents as ostensible background material for the article he is writing. If the officials decide that the book is worthy

of /

of translation and publication, subject would so advise us through Janet and would expect us to provide him at a later date with a full translation of the book which he would use to check the translation by the Soviet publications translation bureau. It was agreed that M. would read the book and summarise chapter by chapter in English and that G. would translate this summary into Russian and have it available for subject at the latest at Saturday's meeting. Subject also asked for a book review on this volume translated into Russian if the book were accepted for translation and publication. He insisted that his acquisition of the book itself would be by simple direct purchase in PARIS from a book store and that despite the fact that a number of copies may already be in the U.S.S.R. from their U.S. book acquisition personnel, the idea of his calling attention to the book as of value and writing up a summary thereon is the significant point. Though this appears like blatant eye-wash to us, it may be possible that subject knows what he is talking about and this can do him considerable good and no harm at all.)

12. G.: How soon do you expect the full translation after you advise through Janet that the book will be published ? Remember this may take two months to translate for the full text. S.: That is too long, don't you have experts where one reads it out in English and the other writes it straight off in Russian ? G.: No. And besides you don't translate a book like you cook blini, to quote you. S.: Before you get the word that it should be translated you could pick up the book reviews on it and have that ready. (The length of this summary would run to about half a page per chapter, with variations as to the significance of the contents and the total would be approximately six pages. Subject was now shown a new set of brochures mostly English, but with some French, and he proceeded to sort them out as to which would be of interest to both the GRU and to the Committee and which were not necessary at all. He also received several general directories. After the piles were selected, those which subject desired were later wrapped up and he took them with him to deliver to the Embassy next morning).

13. G.: Now we will get into our questions. First of all let us clear up one we had at the last meeting. You said that a large strategic missile

base /

base is defended by V-75s in addition to aircraft. S.: And in addition this can be supplemented by conventional anti-aircraft batteries. G.: Who told you that this was so ? S.: I asked this question ten times, I often asked VARENTSOV how our missile sites and industrial centres are protected. I was always told that this is done by the combined PVO weapons available. This includes the proven and accepted anti-air missiles, the V-75, as well as aviation and all types of conventional anti-aircraft artillery. G.: What is the precise role of these V-75 missiles ? S.: Their role is to protect against hostile aircraft which approach the missile base, but the V-75s are not adjacent to the site where the missile base is, but some distance away. They may even be several hundred kilometres away. G.: Well, that is something else, that is the whole point of the question. Before we had the impression that you meant these V-75s were adjacent to the site. S.: No, not at all. First they are picked up by radar long in advance and its course was determined picked up by radar, just as POWERS' aircraft was/and the missiles V-75 go into action as soon as the hostile aircraft is within their range, but the aircraft's target could be 100 kms. away.

14. G.: Do you by any chance know or have heard of a GRU officer by the name of Izmail Aleksandrovich NETSVETAILO ? S.: There was a General TSVETAYEV who died, but I have not heard of this name, he sounds like an Asiatic. G.: That's right and he was supposed to have been here at the French Exhibition. S.: He may have come here under the auspices of the KGB or from the Ministry of Foreign Trade, the KGB does not give us lists of who they send, that is to the Committee, and neither does the Ministry of Foreign Trade. I never ran into this fellow.

15. G.: The next question deals with your experience in Turkey. You said that the GRU Legal Rezidenturas in NEW YORK and WASHINGTON co-operate and also that the GRU has Legal Rezidenturas in ANKARA and ISTANBUL. Do these two Turkish Rezidenturas also co-operate and if so to what extent ? S.: Yes, they do and I have told you about this naturally. For example, I remember I received a cable once from ISTANBUL saying that a potential agent under

assessment /

assessment was going to ANKARA from ISTANBUL. We were requested to check on the hotel he was staying at, and they gave us two possibilities, and the duration of his visit. GIRIN and I went out to look for this Turk. We went out and made this check for the ISTANBUL Rezidentura and sent them the results. And I remember that we sent them a coded message, using numbers, with the results. Between Rezidenturas they use one-time pads for coding and these can be transmitted either by phone or courier. If by phone it is called a telephonagram. There is very good co-operation and mutual support between Rezidenturas in the same country, just as between WASHINGTON and NEW YORK.

16. G.: Is there a senior Resident, to whom the other Resident is subordinate ? S.: No. Both are completely independent. Each has its own operational funds, its own agent net and its own direct communication channel to MOSCOW. Neither one knows what the other sends or receives from MOSCOW. We for example have three channels for communicating with our people in the U.S.A., one is communication with the Illegal Rezidentura and the other two are to each of the two legal Rezidenturas.

17. G.: Try to recall the people in Turkey. Do you remember Ivan Stepanovich KARGALTSEV ? S.: I remember him and I knew him. G.: How about Sergei Polikarpovich TRISHIN ? S.: I remember him also, I believe they were both Naval officers. G.: Do you know what they were engaged in ? S.: In the first place KARGALTSEV was in ISTANBUL and so was TRISHIN. And I was in ANKARA, but I got to know them and KARGALTSEV came to visit me in ANKARA and he was a Captain 3rd Rank. They were there at the same time as I was in Turkey. I had KARGALTSEV together with other ISTANBUL officers to dinner at my home. He is a short, thin man. It was standard practice to invite visiting officers from ISTANBUL to our homes or to restaurants when they came to ANKARA and they would always entertain us in the same way when we went to their town. G.: Do you know if they were possibly engaged in support operations for illegals ? S.: I believe that this is an absolutely reasonable assumption and they were more busily engaged in support operations for illegals in ISTANBUL than we were in ANKARA. In the first place ISTANBUL is a large city of some 1,200,000 and

there /

//

there would be more illegals in that area than in ANKARA which is a large village, but even so I remember that I personally gave support to illegals via a dead-drop. They were travelling (marsh-rutnik) illegals.

18. G.: Do you know who they were or what you gave them. S.: No. Not at all, but I received a signal that the D.L.B. was cleared. I do know what I put in, since it was money. It was 5,000 lire at one time and less on the second time. G.: Did you have specific missions concerning illegals' support, e.g. the acquisition of documentation, a mail drop or legend material ? S.: Illegals are given missions of this kind and so is the Legal Rezidentura. They send their information to MOSCOW for them to use as they see fit. G.: What support activities of this nature did you do ? S.: I remember that at least one letter every month and a half would come from MOSCOW for us to post locally. All of us did this, IONCHENKO, GIRIN and myself. G.: How about documentation for providing a background legend ? S.: We did this also. There has always been an Illegal Rezidentura in Turkey, but I don't know anything about it but now that an experienced man like General SUDIN has been sent there he may break up the Rezidentura into several units or develop them further. I don't know what. There were missions to get all kinds of items of local clothing to the last detail. I also did this twice during my sixteen months there. These items were sent back by diplomatic mail. I went out with GUR'YEV to buy this. The clothing we bought was of the type commonly worn in Turkey. They were all simple items of clothing. G.: How about documentation itself ? S.: Yes, I remember an incident there where Turkish workers were hired by the Embassy to do repair work and their passports were picked up and I remember that the Consul who was a KGB man, Vladlen FEDOROV, called me at that time. Incidentally both FEDOROV and Aleksey VOSKOBOY are now studying at the KGB Institute beyond Pokrovsko-Streshnevo about which I told you before. The latter called me from there just before I left for PARIS and I will see him when I get back.

19. S.: Now FEDOROV when he would get such passports in Turkey would either work on them himself or give them to us and we would write everything from those passports on a special documentation index book (something like a

very /

very elaborate document identikit). There would be numbers keyed to every shade or colour and every possible dimension is keyed to numbers. We would make references, for example, to page 32, line 3 and the Centre would know exactly what we mean since they have an identical book. I never told you about this before, this is something new. By numerical references every letter in every line of the passport can be spotted for size etc. and every other detail. If three lines lower on the passport different lettering in size and colour is used, there would be a corresponding numerical index again by page and line and that would identify it exactly. This is called "etalony". All shades of colour and all types of lines in paper including wavy lines, can be pinpointed. Using this book which is Top Secret and only for clandestine operations, it is possible to duplicate any document in the world. This is a very cumbersome and detailed process to write up and the description of a passport may take ten pages. G.: How do they handle descriptions of paper texture ? S.: For this they do many things. They try to buy similar paper, then they try to get blank samples and finally we have quite a collection of stolen actual passports, from all countries. When a duplication or a forgery is to be made of say a Turkish passport, an actual passport is looked at, together with the report on the "etalony". The documentation expert can then see what changes may have taken place and he can spot any dot or special mark and the measurements are done to the millimetre. When FEDOROV gave us such a passport we would have to work on it for a day or two. After that the passports would be returned to the workers who had been engaged by the Embassy for several days. This is done in all countries and is called technical intelligence.

20. S.: Special requirements are occasionally sent out and in every country all new items in the photography and the audio-radio field are always picked up and samples continually sent to MOSCOW. All types of radio spare parts are purchased as the Centre orders us to and quite often a clandestine agent piece of equipment would be composed of totally non-U.S.S.R. parts. The prevalent types are West German, American, English and French models.

This is particularly true for equipment given to Illegals. G.: To whom is this equipment and documentation sent at the Centre by the Rezidentura ? Does it go to BEKRENEV ? S.: First of all all of the material goes to KISELOV (alias KRYLOV) (in 1955, now to the new Chief KARPOV), the Directorate Chief and there according to the requirement submitted by the other upravleniye, they distribute the incoming material, mostly to the First Otdel of SHELIGANOV (Technical Intelligence Section) or to BEKRENEV (Illegals Section, primarily documentation material for illegals' use). By the way KARPOV is the Chief of the Directorate now and still uses the same pseudo as KISLENKO did. G.: Does not the Illegal Rezidentura do most of the gathering of such documentary material ? S.: That is absolutely right because the others often find it impossible to get such material. G.: In addition it would seem that the Illegals would be better acquainted with what they or other Illegals would primarily need than officers in the Legal Rezidentura. S.: That is also correct, and let me again mention that that is why they sent SUDIN down there, since he will probably attempt to develop the illegal operations there and place illegals at U.S. bases at ADANA and other places, whereas in the past Turkey has been a very hard nut for us to crack.

21. G.: Now let us consider this GRU woman Illegal you mentioned before who is in ANKARA. Do you remember what you said about her ? S.: Not quite, I can't quite place her. G.: You even described that she was in a shop near the Red Cross building on the main boulevard in ANKARA on the left hand side going down to the Soviet Embassy. S.: Oh yes, but she was not alone in this, there was also a man involved. This was on Attaturk Boulevard going by the Red Cross building, just as you said and they run a jewelry shop, mostly silverware. When I arrived they told me not to contact them, but just to watch. There was an old man involved and this younger woman in her thirties. G.: What nationality were they or did they purport to be ? S.: I was told that they were Jugoslavs who had migrated to Turkey some years ago. G.: Was this a man and wife ? S.: No. But they were both members of the same family and there were other children in that family who were born in Turkey. He was an old man and she could have been his daughter, but I never had specific information on this. Our instructions were merely to see how they were getting

along /

along in terms of their being arrested or not, alive or ill and were they in a stable financial position. This mission was particularly assigned to my predecessor, KONDRASHEV and when he turned over the Military Attache affairs to me, as well as GRU matters, he told me just to keep an eye on them but not to contact them until the Centre gave instructions. If I had a map of ANKARA I could spot the store for you easily.

(At this moment a brief pause was made to change tapes).

22. G.: Can you describe this woman ? S.: I've already estimated her age. She is about average height and I can't remember her as being particularly attractive but I can't remember any better than that. The man is over sixty. G.: If they are being paid through what channels do they receive money ? S.: Of course they are being paid and they get it via dead drop, possibly once every three months. I don't remember the details. insert #1 G.: Have they been working for a long time now ? S.: Yes for a very long time. I'd say for decades before the last war. G.: Were they always in this location ? S.: That I do not know but they were there at the time that I was there, that should be very easy to check up on from the records of the store's proprietorship. The store should be most easy to find. insert #2 It is the only silver shop in that immediate vicinity.

23. G.: We will now return to the old set of questions. When you described the "MARS" as two-stage, what did you mean ? and is it obsolete now and being discarded ? S.: No. It has been further improved and instead of the "MARS" they now have the "LUNA" which replaces it. But the "MARS" is not obsolete since they have made a great number of them and there may be possibly ten thousand of them, which are too many simply to use up in practice. It has a very simple construction. The "LUNA" is larger and has the same sort of functional characteristics and a better range. G.: Did you say they are both two-stage rockets ? S.: Let me explain the meaning. The rocket flies as one single unit, but they have an upper and lower set of jets for propulsion which work together in a fixed relationship as the propellant. The rocket does not separate into two stages during flight. That is the true meaning of a two-stage rocket. These rockets have two levels at which the thrust is developed, but it flies as one unit.

24. /

24. G.: It is well known that the automobile factory in GORKIY builds vehicles or carriers for heavy rockets. Have you heard from either Sergei Sergeievich or BUZINOV that rockets are also made there ? S.: I have heard that rocket assemblies are manufactured there. I have heard about this from two sources, POZOVNYY was one and I mentioned the other man to you, he was at the Academy with me.

25. G.: Is "LUNA" in serial production ? And is it issued to troops ? S.: Yes it is in serial production and has already been given to troops.

26. G.: Is the "KORSHUN" obsolete or is it still in use ? S.: It is in use and they have made a large number of them. It cannot even be written off like the "MARS" since there are a great number of these rockets in storage. It is still a basic T.R.A. weapon and it is a liquid fuel rocket of the T.R.A. I cannot tell you why it was not shown in the Parade.

27. G.: Have you heard anything further on the status of delivery of missiles to the satellites, particularly during your last stay in MOSCOW ? S.: I reported to you before that certain categories of rockets are being given to them, particularly T.R.A. rockets. The satellite troops are being trained in using these weapons and Soviet instructors are assisting in the training. There are many test firings. The only new development is that all this is being further perfected. G.: When are they expected to be operational in satellite armies, for example the armies of the D.D.R., the Czech and the Polish ? S.: It is estimated that they are operational now. They have already had test firings and this can only be done if the preliminary training has been completed. After troops have gone through rocket firing training it must be clear that these rocket units are operational. Even in the case of guided missiles the entire difficulty is in making the computations. The actual firing technique is relatively simple. The satellite troops might still require more experience in making their computations to strike a target exactly, but there is no problem in their ability to fire rockets.

28. G.: When GOFFE was the Commander of Artillery in the Sub-Carpathian Military District, did he have free rockets or missiles under his control then ? S.: He certainly did and that was one reason why he was taken from

there /

there as a man who had practical experience in operating such rockets, in addition to his being a capable man and General.

29. G.: Remember you mentioned that at the Engineer Academy Imeni KUIBYBSHEV may be concerned with construction problems and training of troops for siting smaller missiles. Does it have anything to do with the larger missile base construction such as MOSKALENKO controls ? S.: This Academy is in MOSCOW on ulitsa Obukha. They have several faculties there. They train fortification specialists and pioneer engineer troops who are concerned with all types of field fortifications and I told you that they also train engineers in the construction of every type of auxiliary and basic equipment on the ground for missile sites including bunkers etc. G.: Would this include all types of rockets, even ICBMs ? S.: Absolutely, for all rockets. This Academy is a general academy and it trains engineers for every category of engineer work. G.: Even for GUASS which is the Chief Directorate of Airfields and Special Construction of the Ministry of Defence ? S.: Absolutely. All that must be specified is what special training must be given for the type of engineer required. This academy is the only engineer academy in the U.S.S.R. All other engineer training installations are schools or higher schools. These train junior officers. The Academy has a special faculty which trains engineers for engineering construction for rockets.

30. G.: Does GRAU control any plants at all or does it just have representatives at plants to keep an eye on production ? S.: They have voyenpredy (military representatives) and these representatives are charged with the checking of each item of military equipment completed. They would condemn any defects and particularly for rockets they must check every item on a technical check sheet (formular) before they sign it and accept it for delivery to an Army depot. Everything must fall between allowable tolerances. There is not just one representative at a plant. There are brigades of them and they are all subordinate to GRAU. There is a special GRAU Directorate that is organised to handle the representatives. G.: Is the terminology of the organisation consisting of officers who staff this correct as the Otdel Tekhnicheskogo Kontrolya ? S.: The terminology is correct, but it is a Directorate, not an otdel. This is an enormous organisation and consists

of /

5

of thousands of officers which are sent all over the country and it is so large that it even has its own Personnel Section which in turn is subordinate to the Personnel Directorate of GRAU. There are many other personnel sections in GRAU, each one servicing the different GRAU Directorates. Many of my classmates from my VAK course were sent to GRAU where they went out as military representatives on rockets.

31. G.: Where is the T-10 tank produced ? S.: In the Urals, near SVERDLOVSK, but exactly where I do not know. G.: How about the T-55 tank ? S.: This is built in GORKIY and also in the Urals. Incidentally this Lieut. Colonel I just thought of, his name is GOLUB. He graduated from the Artillery Academy in 1959 and he works in GRAU on rockets and he had been a former Adjutant of VARENTSOV's. His name is Vladimir and his wife's name is Nina. He is running around with some woman, a draughting engineer and I think that Nina is VARENTSOV's girl friend.

32. G.: In July you mentioned the amount of money spent on tank production in one year. Do you recall what year this figure was for ? S.: I can't remember. When VARENTSOV mentioned it, he was complaining about his being criticised for putting up permanent artillery housing shelters instead of canvas. After I gave you this information in figures I don't remember it any longer.

33. G.: Do you think you could find out from POZOVNYY about the production of strategic bombers in general and details of production designers, particularly of those plants at KUYBYSHEV and MOSCOW - FILI. S.: Yes, I could easily. G.: That's fine and that would be of great interest.

34. G.: Is KASHIN still at KAPUSTIN YaR ? S.: One of my first problems when I return to MOSCOW is to get KASHIN transferred from KAPUSTIN YaR to the Dzerzhinskiy Academy where I have already made arrangements in the Personnel Section. G.: Will he tell you all about his work there when you see him ? S.: Of course he will, he will tell me everything and let me again emphasise to you that people like KASHIN and POZOVNYY I can very simply invite to my home for a modest entertainment and I can record all their conversations on a tape-recorder with ease and security. I admit that it would be dangerous to record

#40

the conversations of VARENTSOV, the Minister or people on the General Staff. (Subject again makes a request for a miniature wire recorder to carry in his pocket and a second one of a small size table model which could be concealed in his home). When KASHIN returns I will get very valuable information on rockets from him because he is getting ready to present the materials that he has collected for his Diploma.

35. G.: Who told you that female astronauts would be launched in sputniki next year ? S.: This was told to me by both BUZINOV and POZOVNYY. They said that they wanted to astound the world and they have already selected a group of athletic type women to train for this.

36. G.: Do you recall that at the Rumanian Reception in early August, KHRUSHCHEV spoke of a hundred megaton bomb, not one megaton as you mentioned ? S.: The point is that KHRUSHCHEV was drunk and he wasn't speaking of megaton equivalents of any kind, he was speaking of the actual weight in tons. He mentioned a hundred ton of actual weight, mixing up nuclear yield with weight. He just mixed everything up and both Sergei Sergeievich and BUZINOV told me about this. G.: Did either one of them make any statement on the military feasibility or value of such a weapon, namely a 100 megaton TNT equivalent yield ? S.: No, that is pure fantasy. That may be desirable but no-one ever mentioned this.

37. (WYNNE was about to ring, but subject said that he would rather work a little longer with us and not go out with WYNNE that evening, but did request that WYNNE be given the suitcases with his purchases made by us so that WYNNE could deliver them to his hotel at 1000 hours on the next day. This was done by Roger during the next hour).

38. G.: The last group of questions deals with your speciality, the GRU and particularly the counter-intelligence aspects. Now listen carefully and you may remember, since you were involved in these things as a desk officer at one time. Did the GRU Fifth Directorate, the Sabotage boys, have any operations planned for India, Pakistan and Ceylon and if so, specifically what ? S.: The Fifth Directorate had a whole programme planned for every country in the world for a long time and of course this includes these three countries. They are continuously refining the information to suit this plan.

I/

9

I can tell you the exact things they wanted to know since I was sitting on the desk. From the Rezident in PAKISTAN I was constantly receiving data on drop zones. There were complete area descriptions and all terrain details and also orientation points and even signals that could be used in parachute or airborne operations. All major centres and other targets were clearly oriented with respect to each drop zone. The entire local police and security situation was also discussed. This was a very complete report and it was assigned by the Fifth Directorate. Specific data is either put in operational despatches or in some cases as an annexe to another operational despatch. When this is delivered to the Fifth Directorate they study the entire report and give us (Fourth Directorate) a written evaluation of the report. It may say that it was thoroughly prepared, or incomplete, or it was well prepared butlacked the following details which they request clarification on.

39. S.:Activity against Pakistan is more active than against India because the agent net in India is on conservation and we know about all we need to know about India, but Pakistan is considered to be an enemy country, just as Turkey and Iran are. When I was there at the Centre Colonel FUKOVSKIY and VOLKODAYEV were sitting on Iran. Since then VOLKODAYEV has been sent to the Academy and FUKOVSKIY to TEHERAN.

40. S.: On Pakistan they have also all details on every source of water supply and every dam and reservoir. This is both for flooding purposes and for contamination. Every tunnel in every country is known to the Fifth Directorate. Of course they also know about all industrial centres which contribute to a military effort. They make analyses of how destruction of these would affect the military potential. Such strategic data are compiled and delivered to the First Directorate (Operations of the General Staff). All other targets, however, are kept in GRU for action by clandestine means such as contamination, assassination, sabotage, etc. The only information given to the General Staff is that which can be used by combat arms of the armed forces, including Navy and Aviation. The other targets would be acted against by agent groups organised on the territory of the USSR as well as by agent groups within the target country. These latter include Illegals as well as other agents.

41. /

41. G.: In order to obtain this data and fulfill the mission, is the Indian Communist Party involved in such operations, either independently or under control of GRU ? S.: They are certainly used and under the direction of GRU officers who are in cover positions there. G.: In other words you have GRU officers under cover in these countries who would make contact with local Communist Party leaders and levy missions upon them. S.: That is exactly right. Of course our military people do not meet Communists openly, although they may shake hands with them at receptions. Only GRU officers under cover do this and that is why the stress is to have more and more GRU people under cover.

42. G.: Is India used as a base for operating against Pakistan or vice-versa ? And are Communists used for this too ? S.: Of course they are and they operate from there against Iran too. This is simply a third country agent operation, which is very common.

43. G.: What would you say in the India, Pakistan, Ceylon area is the main GRU mission priority of such categories as espionage, disinformation, political action, sabotage, support of illegals or any other action ? S.: In the first place all missions of all categories are assigned simultaneously and their execution is done in proportion to the ability to fulfill them. If this were not so and a supplementary mission not earlier mentioned were levied, the Rezident could simply say "Why did you not request that sooner, I had a chance to get that before". Therefore missions emanating from all Directorates, such as the Fifth, the First and the Information Directorate are all set out together. G.: Do you mean then that there is no first priority mission ? S.: No. There is a first priority mission. The first priority is always for the creation of an agent net and for its expansion. G.: Is there a second priority ? S.: No. After this all are assigned together and are at the same level. The Rezident knows everything that is assigned for a year, but the individual case officer will be given missions of varying types and number depending on his own capabilities and the accessibility of his agent to targets of intelligence value. Therefore the first priority is always on the creation

and /

and expansion of an agent net and all funds are given to this priority in the first instance. All other missions are on the same level and are secondary. Many of the secondary missions so called are accomplished by opportunity, for example, one source may be able to provide an answer to one requirement but not another.

(44.) G.: What was the degree of KGB activity in those countries and what are their prime intelligence missions ? S.: The KGB are concerned of course with recruiting agents in political intelligence, the obtaining of political information and in economic intelligence. And on occasion they would get military information but they would keep this for themselves so that they would get credit for it at Headquarters. They might tell us about it after they had already sent the report in to Headquarters. There were very many of them there and of course there are very many of them there now. G.: More than GRU officers in number ? S.: Yes. Much more than we. G.: In about what ratio ? S.: About two to one. For example in our own committee now we have about seven people and they have about fifteen. G.: How was it in Turkey ? S.: I can count it right up. There was I, GIRIN, YEMELYANOV, GUR'YEV, ISAYEV and CHICHERIN. This would make six active operational case officers, I am not counting code-clerks and other assistants. They had YERZIN as Chief, FEDOROV and VOSKOBOY, POKROVSKIY, a journalist, a Second Secretary and another Second Secretary, two Third Secretaries and three operational chauffeurs who were case officers, whereas we had only one, TIPTSOV. There was a great mob of them in ISTANBUL, the First Secretary was the Chief and they had all kinds of KGB officers under Torgpredstvo cover. Some of them had the job of watching other Soviets, whereas the other section were engaged in active intelligence work, recruiting agents, etc. They were about two to one there and here in PARIS as NEDORUB told me at the Exhibition, the place is full of KGB - one can't turn around to spit without hitting one.

(45.) G.: What were your GRU table of organisations strengths in Pakistan and India ? S.: In 1954 when I was first considered for assignment to Pakistan there were only five of us. For quite a while there were only three in Pakistan under DUBROVIN, the Military Attache. All he had was a chauffeur and an

interpreter /

interpreter. To this he was given two GRU officers under cover and that was all. Later the Military Attache, who was the Rezident also had two assistants, but he also had five GRU officers under cover. The reason why they have more under cover now is because now they have GVF representatives there and TASS representatives, and also more Torgpredstvo men. G.: Are they all in KARACHI ? S.: No. There are only two in KARACHI. When the Government decided to set up a new capital in the mountains two went there and other Torgpredstvo men travel throughout the land from city to city. G.: How do you cover East Pakistan ? S.: By making frequent TDYs there. There is quite an agent net there and others under development. I mentioned two agents there.

46. G.: How about India ? Aren't you fairly scattered there ? S.: Yes. They are in three cities there: NEW DELHI, CALCUTTA and BOMBAY. They all travel back and forth extensively. G.: How many people did you say GRU had in India ? S.: At the time they were planning to send me there, let me count them up ... there were ten operational case officers in India and again I do not count code-clerks and other personnel.

47. G.: I believe this completes the list of questions I have. S.: When shall we meet next time, the day after tomorrow and then on Saturday ? G.: The next time we'll cover completely all your EEIs and priorities and your operational plan and on Saturday you will recite them back to us and we will correct them and then we will just relax. S.: Will I practise with the radio transmitter again ? G.: No. That will not be necessary because when it is ready to be given to you it will have a complete description of all the parts and all procedures inRussian as well as photographs of all the parts and labels pointing to them in Russian. S.: I give you my word that in my life in MOSCOW I have absolutely no free time in the evening to do any additional work such as studying English to improve it. I am just too tired after my daily grind. My cover job requires so much effort. Although I do not need to fuss with delegations as much as before thanks to my new job, I must supervise other case officers in their arrangements for taking around all kinds of foreign delegations. However, I always attend receptions. G.: Your work on the Committee line is pretty complete now is it not ? S.: Yes. That is alright

and /

10

and I can certainly give them enough material to confuse them and supplement that with all kinds of gifts. Of course others also bring back gifts but it is all little junk, except that a Chief like GVISHIANI always gets worthwhile gifts. I always bring better gifts than the others.

48. (Subject was told that he could arrange his trip to VERSAILLES with WINNE at 1000 hours the next day when he saw WINNE and the timing would be such to permit him to make a factory visit should one be arranged for him).

G.: On Thursday, for the sake of security we decided to make the time at 2030 instead of 2000 hours but at the same place because it is very good.

S.: Yes. It is a fine place, and we will meet then at 2030 hours. Please ask HOOK to arrange a trip for me. G.: There is no need for us to press HOOK. He will be glad to do it himself for you if he possibly can. S.: I will do everything for HOOK when he comes to MOSCOW - get him a car and meet him at the airport. H.: But under no circumstances can you use HOOK for any operational reason whatsoever. S.: I don't see any reason for this and particularly as you say don't do it, I certainly won't. However I will meet him and take care of his delegation and arrange lectures for him and receptions. He will probably come from America with an American delegation, and not a mixture of French and American. I explained this to him today and he agreed with me. By all means be sure that WYNNE stays as the representative of his firms and does not break away from them as I suspect he would like to do if you subsidise him. Let him form his delegation for going to MOSCOW at the end of the year or in the first part of 1962. H.: This is being done. S.: I will let you know about the TIKHONOV delegation that I may accompany to England in the early part of 1962 and it would be interesting to know if they would give me a visa to the U.S.A. if I were to take a delegation there. At any rate we probably will not meet again for about four months. And as a matter of fact I do not see, since we have arranged communications, what useful purpose there would be in meeting sooner.

0 (After farewell amenities, subject left at 2345 hours. He was delivered by M. and J. to the area of the footbridge over which he crossed and went to his hotel).

Meeting #42, 14 October 1961 (Paris)

(Transcript of Meeting #42 from the tape recording and from George's notes.)

1. Subject was met at RV point #4 which was selected for security reasons, i.e., to avoid the frequent use of RV #1 and the dangerous areas of RV 2 and 3. The pick-up was made by George at the island over which Le Pont de Grinelle passes. Protective surveillance was afforded by both Mike and Harold and the car picking up Subject with George was driven by Roger. The pick-up was made cleanly without incident, and Subject arrived at the safe apartment at 2013 hours. Subject immediately reported on the last events at the Soviet Embassy in Paris and on the success of his trip on Friday.

2. On Friday, 13 October, a car sent by George HOOK and driven by his engineer, Marcel G. HOCHON whose business card read ARMCO, 57 Rue Ampere, Paris XVII, Telefon Wagram 68-20. S: I was already acquainted with this engineer since he was the one HOOK sent to me during the first trip to visit a factory. (They drove at once to the Soviet Embassy where SOLOVYEV was picked up. He had been advised by phone of the trip by Subject.) S: The REZIDENT was also there and when I told him about the proposed visit he was very pleased and said SOLOVYEV should also go along. He was taken to HOOK's office where we were met by HOOK who introduced us to his interpreter. (They proceeded together with the interpreter provided by Mr. HOOK. His name is Marc KAGANS and his card read 48 Rue La Boetie, Paris VIII, Telefon Ely 89-50 -- inginieur diplome E.P.R. /Inginieur Principal Au Service Technique De La Ste. Fran. Des Construction Babcock and Wilcox/. KAGANS speaks Russian well and told Subject that he had left Riga in 1928 and that he had spent 35 days in Moscow at the French Exhibition.) S: KAGANS lost his wife during the war and has two sisters who live in Moscow. He daughter was from the first marriage. (He had also visited the Committee in Moscow and he knew about a committee representative -- whose name Subject forgot -- who worked under LEVIN, the KGB chief representative in the Committee. Subject knew that this man was also a co-opted KGB worker.)

3. KAGANS plans to send his daughter to Moscow in 1962 to attend the university there and to study the Russian language. He asked Subject for his advice as to how to approach the Soviet Consulate to effect this. S: I introduced him to SOLOVYEV who exchanged cards with him. In addition, I introduced SOLOVYEV to HOOK's engineer who promised to pass brochures for me through

APPROVED FOR RELEASE
31 MAR 1992

SOLOVYEV. KAGANS also promised to pass brochures for me through SOLOVYEV, particularly since he plans to call the Soviet Embassy later anyway to inquire about the procedure necessary to send his daughter to school in Moscow in 1962. Therefore, everything is normal there and let these contacts through SOLOVYEV proceed as arranged. It will be good for me with no involvement on my part in the future. SOLOVYEV later reported to the REZIDENT that the contacts had been made. Therefore, I will be able to state at home that I introduced two people to the GRU officer at the REZIDENTURA here and this will go to my credit. He was extremely friendly to me but with no other forwardness in his conversation. (They remained at the plant where they were very well entertained until early afternoon by the factory director, a young man about 35 years of age. They returned to Paris at 1430 hours. A few innocuous documents were given to Subject by the firm. He put these with the remainder of the brochures he had obtained from us and from HOOK. From 1430 hours till 1800 hours he worked at the Embassy with the REZIDENT, with ANANYEV who got up from his sick bed, and with SOLOVYEV and KUDRYAVTSEV. They packaged up 4 kilograms of assorted important so-called documents for GRU and the balance was to go by heavy mail to the Committee in Moscow.

4. The following information considered by Subject to be of value was picked up that afternoon and he acquired more valuable information in a short private talk with CHEREDEYEV, the REZIDENT, on Saturday at 1130 hours. The REZIDENT told Subject that he would appreciate it if Subject would politely and without presumption pass the REZIDENT's greetings to Ivan Aleksandrovich (SEROV) and showed Subject the very fine report which was being sent to Moscow regarding Subject's performance in Paris as well as a short cable to that effect. Subject on his part said that he would report most favorably on how he saw things being done at the REZIDENTURA in Paris. In short Subject felt that with our help, he had accomplished his assigned mission to Paris in a favorable manner. The planned lunch with KUDRYAVTSEV could not take place because Subject was out of town on the trip during that time. Subject also had a short talk with KUDRYAVTSEV before he left and was given threeor four administrative matters of little import to straighten out for KUDRYAVTSEV with the Committee when Subject returns to Moscow. This was clearly in Subject's view an ill-disguised gesture upon the REZIDENT's part to "scratch each other's backs."

5. Subject discovered that CHEREDEYEV's pseudonym was CHAROV and that he as well as all REZIDENTs were ordered to stay in place in their assignment during the Berlin crisis period until further notice. This meant that no one would have leave at this time and that CHEREDEYEV could possibly get his 1961 leave early in 1962. Two days ago the Paris REZIDENT sent a GRU

cable stating that the NATO countries were intensifying their military preparations, and specifically were attempting to order 250,000 cots for hospital use to have in reserve in the immediate future for troop housing. This information came from Soviet agents in France, presumably Communists. The above information was passed to Subject by the REZIDENT.

6. While with the REZIDENT on Friday, Subject was told that all persons entering the REZIDENT's conference room -- which was formerly the reception room of the military attache, General MASLOV -- would necessarily stay away from the translucent windows until Gen. Maior SOKOLOV entered the room. He is the present military attache but has his offices elsewhere, and it is undesirable to have any silhouettes visible in that room of GRU offices unless the overt military attache is present.

7. Just prior to leaving, Subject was asked by Gen. Maior SOKOLOV to visit him for fifteen minutes. Although Subject told him it was impossible for him to bring a package to Moscow since he was overloaded already, he did take a number of fountain pens for SOKOLOV's son, and was requested to contact General SMOLIKOV, the Chief of Personnel of GRU, about sending General SOKOLOV's wife to Paris by the end of October. The General told Subject that his son is now entering the language faculty of the MDA but that the school was again going to be separated into the former VIIYA and MDA Language Faculty as it was before. The new chief will again be General BIYAZI who was formerly the Chief of VIIYA. The reason for this separation is that they need an independent language school to serve the entire Soviet Army because military interpreters are needed. Subject considered this conversation with General SOKOLOV as being for the purpose of seeking favoritism through Subject's known connection with General SEROV. Subject also mentioned that Captain 2nd Rank SUVORIN who was discharged from GRU is now working for the Committee but that he has been co-opted by the GRU to fulfill GRU missions. This ended Subject's report.

8. He was told very firmly that he was not to call up Marie-Polle LESCHAUX. He had attempted to do so during the day but she had not been in so it was decided that Roger, legending himself as a French associate of Subject, would make the phone call after Subject's departure. He would express Subject's regrets at not having been able to say farewell personally, and say that Subject would possibly contact her on his return to Paris in several months. (The purpose of this was to avert a possible letter from the lady sent in care of the Committee in Moscow.)

9. Subject reassured us that there could be no reflection on him in any way from the direction of KAGANS even if SOLOVYEV would be in contact with him in the future. Subject pointed out that if KAGANS had been recruited by the KGB he would not have mentioned the fact that he had met the Committee representative and would not have referred to him by name. Subject knows this representative to be a KGB worker.

10. A complete review of operational instructions followed which Subject covered perfectly from his own notes. To this were added two amendments in the Operational Plan, namely that our radio communication to him would maintain the same frequency of messages, that is twice a month, but he could listen at any night of the week at 2400 hours. He was, however, to change his winter frequencies to 5440 and 6315 beginning 1 November. Subject was completely content with this and inscribed the new frequencies in his notes stating that he would destroy the old frequencies.

11. A complete review of the EEI's then followed and Subject was given two additional documentary information requests. These were to obtain manuals on the latest tanks, that is, the T-10M and T-55. The other request was for manuals on all the latest conventional artillery pieces, particularly smooth bore guns. Subject believed that he would be in a position to get this information and added that, in his opinion, the smooth bore guns were probably large mortars.

12. Subject was instructed in the importance of precise data on important yields tied to accurately dated explosions and was also requested to pick up and record any information whatsoever on Soviet commo, cryptanalysis, cryptographic work, personnel methods, security, etc. This was a re-emphasis of the points previously given him. Only two questions were asked of Subject--one was on his estimate of the date of the first use of the VCh system. Subject stated that he felt sure that the system was in existence prior to 1941 because he remembered that when he was first assigned asa political worker in the Moscow military district about 1940 the system was already in operation, even though it may not have been multi-channeled and as refined as it is today. His best estimate was that it has been in operation about 22-25 years.

13. The second question was a request for all available information, physical description, etc., on Captain YERMOLENKO who was Subject's classmate andwho both Subject and GRIGORYEV knew had been assigned to illegals work. Subject said that YERMOLENKO was an engineer captain, a graduate of the KUYBYSHEV Engineering Academy, and that he went to illegals training immediately after graduating from the MDA in 1953. Subject saw

11

him in late 1954 and was told by YERMOLENKO that he was engaged in "sly work" (ZANIMAYUS' KHITRYMI DELAMI). Since then Subject had not seen him and neither had GRIGORYEV but GRIGORYEV assumed by his absence from Moscow -- since they had been good friends -- that YERMOLENKO was already working in his target country. His description is as follows: sharp features, piercing eyes, thin but very strong and wiry, height about 170 cm, has slightly visible pock marks on cheeks, and has light hair combed straight back. He is modest and very quiet and is quite a sportsman. This completed the business for the day and for the last meeting.

14. Subject was given a volume of Man and Space by Dr. Ralph LAPP together with the 16-page translation of the summaries of the 13 chapters of this book which were prepared by George. The translation was from English to Russian. Subject was quite happy with this and said that we should be prepared to provide a full translation of the book as well as Western book reviews in Russian as soon as he gave us word through JANET that the powers that be desired to have this book published in Russian with, of course, Subject writing the introduction. Subject was also given the broadcast schedules of Russian-language broadcasts by VOA and BBC.

15. Now there was much photography done of the individual case officers with Subject and of group photographs, and champagne toasts were drunk. A modest setting of canapes was prepared by Roger and, after the traditional and somewhat emotional farewell on the part of Subject during which he kissed and hugged each case officer in turn, all sat down for a moment of silence in traditional Russian style. Subject left at 2245 hours to be deposited by Mike and Joseph in the neighborhood of the Caravelle Bar. Subject was to be met there by WYNNE to finish his last evening in Paris prior to his rising at 0500 hours the next morning to be accompanied by WYNNE for his scheduled flight via Air France from Orly to Prague.

16. Due to a very extensive fog the next morning Subject was still in the waiting room at 1100 hours. By this time both Mike and George arrived. They were to use the airport also but for much later flights. There was no point to contact or to be seen by Subject, so from a remote vantage point Mike and George saw Subject proceed to his plane. It was finally called for departure at 1115 hours. This would indicate that Subject would most likely miss his Soviet plane connection in Prague and would arrive in Moscow either late or on the following day, 16 October. This fact could explain why the phone signal indicating safe arrival scheduled for the evening of 15 October in Moscow could possibly not come through until the same time on 16 October.

New Anecdotes

1. Khrushchev decided to choose a political pseudonym for himself. This was before the start of business of the Twenty-Second Congress of the CPSU. So, he went to the mausoleum and turned to Lenin with the request of assistance in choosing a pseudonym. Lenin answered that he himself still finds it difficult to give any of his successors a pseudonym and he refused to recommend anything. Then Khrushchev turned to Stalin. To Khrushchev's request Stalin asked him two questions: "Ty na menya rychish vsye zabolyet" "Da, rychu", answered Khrushchev. "Ty na menya vsye shchelye shipish't" "Da, shiplyu", answered Khrushchev. "Then from your surname throw out the growling letter (r) and the hissing letter (shch) and all that remains will be your political pseudonym", answered Stalin. And after that Khrushchev threw Stalin out of the mausoleum.

2. A shopper comes to the store, approaches the clerk and asks for a kilogram of meat. The clerk answers that there is no meat. Then the shopper asks for a kilogram of butter. The clerk answers that there is no butter.

Then the shopper asks for a kilogram of fat. The clerk answers that there is also no fat.

Then the shopper asked to be given a kilogram of newspaper. The surprised clerk asked the shopper why he needed a kilogram of newspaper, to which the shopper answered: "Everything is available in the newspaper."

3. Radio Armenia was given the question: "Why are we overtaking America which is sinking into oblivion?" Radio Armenia couldn't answer the question and the radio was shut down.

no coding

4. Rabbi Aronson was asked the question: "What do you have to do with a refrigerator so that there will always be groceries inside?" The answer offered: "One must plug the refrigerator not into the electrical system, but into the cable system."

5. Rabbi Aronson received the question: "Will Gog pray on a bald pate?" The rabbi answered: "We do not answer political questions. It is understood that the bald pate is that of [illegible]."

6. Rabbi Aronson received the question: "Why did Khrushchev take Stalin out of the [illegible]?" He answered: "The mausoleum was designed for two only."

[redacted]

[redacted]

typed 3/27/62 [redacted] 1.3(a)(4)

1. The following information was obtained from [redacted] 1.3(a)(4)
[redacted] at interviews at the American Embassy, London, on March 9, and at [redacted] home in Woking on March 10, 1962.

2. In his capacity as Russian expert and interpreter, [redacted] 1.3(a)(4)
has spent a great deal of time travelling in the Soviet Union and the Satellite countries during the past few years. He reckons he has spent a total of one year in the USSR alone. The Soviets have made it plain to [redacted] from the first that they consider him to be a suspicious character, and they have told [redacted] that they would much prefer to deal with a non-Russian-speaking representative. Nevertheless, aside from one or two attempts to tempt him with an attractive woman they have not bothered him, and [redacted] had felt that the Soviets were more or less reconciled to his frequent appearances in the USSR on behalf of [redacted]

3. As we already knew, [redacted] was with the [redacted] delegation the entire time, and was the GKKNR official in charge of the group. Most of the other Committee officials with whom they had dealings were technical specialists in the pulp and paper field. [redacted] was very clearly in charge, and all the other Soviets deferred to him on all subjects except technical ones. [redacted] would drop out of the conversation whenever it took a technical turn. 1.3(a)(4)

4. On the train from Moscow to Leningrad, [redacted] asked [redacted] if a reception would be given by the British Embassy for the delegation, to which the Soviet officials involved would be invited. [redacted] replied that no such reception was planned. [redacted] said that it would be a good idea to arrange one, and that Mr. Hillary KING and his assistant, [redacted] should be invited. [redacted] raised the issue again in Leningrad, and once again on the train going back to Moscow. Worn down by [redacted] persistence, upon returning to Moscow [redacted] went to [redacted] to ask him what he thought of the idea. [redacted] said that he was willing to arrange such a reception, but that because of the short notice he thought it should be quite informal and that it would be simpler to leave the British out of it, particularly since Hillary KING was out of town. In any case, all the delegation members were AMERICANS. [redacted] and [redacted] wrote out a short guest list consisting of the delegation, the appropriate GKKNR officials and a few members of the American [redacted] 1.3(a)(4)

[redacted]

3/22 approx

Embassy, and it was agreed that [redacted] would relay the Soviet invitations verbally to [redacted]. 1.3(a)(4)

5. When [redacted] saw [redacted] on Friday, January 26, [redacted] immediately brought up the subject of the reception again. [redacted] told him that it was arranged for that evening and asked [redacted] to pass on the invitations to the Soviet officials concerned. [redacted] asked if Mr. KING and [redacted] were coming and seemed quite unhappy when he learned that they were not. [redacted] explanations as to why they had decided to make it a strictly Soviet-American affair did not appear to satisfy him. [redacted] repeated that at least [redacted] (whom he described as having a beard) should be invited. 1.3(a)(4)

6. The reception took place that evening and went off very well. According to [redacted] all the Soviet guests seemed very pleased except [redacted] which was a little strange after all the pressure he had applied to arrange it in the first place. [redacted] did not notice anything else about [redacted] behavior at the reception [redacted] this point was touched on only lightly. An interesting point is that nobody had met LOPATENKO before — not even [redacted]. He came uninvited, and was clearly the ranking Soviet official present. LOPATENKO is in his fifties, speaks English fairly well, and has a pleasant personality. The Soviets came and left as a group, and it was LOPATENKO who gave the signal for departure. The reception lasted about 1½ hours. 1.3(a)(4)'

Apparently had met LOPATENKO - for report on GKKNR folder dated 9 NOV. 61

7. On the evening of January 27, [redacted] learned that their scheduled flight for Warsaw the following day had been moved up from noon to early morning. Since they did not know if [redacted] was aware of this [redacted] tried to reach him at home. No one knew [redacted] home address or telephone number, and it proved impossible to obtain them; [redacted] does not know whether this was because [redacted] is not listed in the directory or because he doesn't have a telephone at home. [redacted] was finally able to get in touch with VASENKO, one of the GKKNR paper specialists, who allegedly went to [redacted] home with the message. 1.3(a)(4)

8. At 6:15 the following morning (Sunday, January 28), [redacted] was packing in his hotel room when [redacted] knocked on the door and came in alone. [redacted] led [redacted] into the bathroom in a mysterious manner and proceeded to turn on all the taps. He then said, "You must do something for me as a friend." He asked [redacted] upon return to London, to send a telegram to a certain cable address with the following message: "Please meet me at _____ on _____. /signed Andy." [redacted] explained that [redacted] must provide the time, date and 1.3(a)(4)

[redacted]

[redacted]

place to suit himself, and that a man (undescribed) would meet him there at the appointed time. [redacted] was then to give the man the following message from [redacted] "Budte ostorozhny, potomu chto mashyna ___ ___ ___ /three letters/ sleduyet za vami i oni smotryat na vas vse vremya seychas." /Be careful because car ___ ___ ___ is following you and they are watching you all the time at present./ [redacted] wrote all this down in his notebook, but by the time [redacted] had finished he knew that he did not want to undertake such an errand. [redacted] had just started to voice his objections when the porter came for the baggage and no further conversation was possible. On the way to the airport [redacted] seemed to be in unusually good spirits. 1.3(a)(4)

9. At the airport, while they were going through passport control and customs, [redacted] noticed a man in civilian clothes and a green hat, obviously a security type, who was standing nearby and watching the delegation closely. [redacted] has never noticed surveillance of this sort at any of his many previous departures from the Soviet Union. When the processing was completed, [redacted] had to exchange money to pay for excess baggage. To do so, he had to go to the bank which is located in a different building. [redacted] accompanied him. On the way back [redacted] stopped and told [redacted] that he could not carry his message for him, that he was a businessman and did not want to be involved with something that was a clear violation of Soviet law, etc. [redacted] was stunned; when [redacted] finally impressed on him that he would definitely not fulfill his request he asked [redacted] to return the paper on which he had written down the message. [redacted] tore the paper several times and handed the pieces to [redacted] [redacted] seemed extremely upset. He asked [redacted] to be sure to ring him up ([redacted] has his office telephone number) upon his return to Moscow in several weeks time. There was no further conversation between them. 1.3(a)(4)

10. It was still quite dark when this scene took place and [redacted] is quite sure that no one could have observed or overheard them. [redacted] no longer remembers the telegraphic address except that it was a standard commercial one-word contraction ([redacted] gave "AMFITREX" as an example), followed by "London." He has forgotton the plate number of the car in the message, except that it consisted of three letters, but believes that he has remembered the message itself word for word. 1.3(a)(4)

11. [redacted] slept in the same compartment with [redacted] on the train from Leningrad to Moscow. While the two of them 1.3(a)(4)

[redacted] [redacted] 1.3(a)(4)

were sitting alone in the compartment [redacted] pulled out a transistor radio (he told [redacted] it was Japanese), turned the volume up high and told [redacted] "They don't like your being here -- you know too much," and, "be careful, they are searching your bags." 1.3(a)(4)

12. For a Soviet official, [redacted] talked a good deal about himself. [redacted] was able to recall that [redacted] is a retired Army colonel, that he was at one time the assistant military attache to Turkey, that he is married, has a sixteen year old daughter, and that his wife is six months pregnant, that he has been to England and France with delegations. [redacted] also mentioned that he worked with an electronics delegation several weeks before ([redacted] does not know the nationality of this delegation), and that he was planning to take a group to Switzerland for the auto show in the latter part of March; [redacted] added, however, that the Swiss trip might not come off because "the Swiss are very difficult about visas." 1.3(a)(4)

13. [redacted] mentioned several times that he was planning to lead a group to the United States and that he has already applied for his visa. [redacted] recalled that [redacted] already had the itinerary for this trip: they are to arrive in New York on May 9 or 10 and will proceed to Seattle to spend about three weeks at the World Fair. They will also visit Washington and perhaps San Francisco. [redacted] was not sure about the exact sequence of cities and did not know what character the group would have; he did have the impression that the entire trip would last four to five weeks. This American trip was common talk among the other GKKNR members. SHVARTS said that he was looking forward to it as he had never been in the U.S. The trip was also mentioned by a girl interpreter who was filling in for SHVARTS one afternoon: she said that she was dying to go to the U.S., but that [redacted] would never take her, he would take SHVARTS. 1.3(a)(4)

14. [redacted] was intrigued by [redacted] apparent duality. In the presence of other Soviets he was the typical officious party-liner: at a banquet in Leningrad he got up and delivered a militant speech about peace and friendship that could well serve as a model of its type. On the other hand, when [redacted] was alone with [redacted] or with the other delegation members he would make very candid and unusual remarks. He told McGOVERN that MOLOTOV was very ill and that there was no chance whatsoever that he would ever return to Vienna. He also told them that "We are giving the Chinese so much aid that we are beginning to wonder if they won't bleed us to death. Our relations with them are very bad." [redacted] said 1.3(a)(4)

[redacted] [redacted] 1.3(a)(4)

that up to the scene at the airport just before departure [redacted] appeared to be in good spirits throughout, and in full command of the situation. 1.3(a)(4)

15. [redacted] described SHVARTS as being one of the official GKKNR interpreters. His English is quite good. Although assigned to the [redacted] delegation as interpreter, SHVARTS did not actually spend much time with them because [redacted] spoke Russian. For example, he did not go to Leningrad with the group although he was originally scheduled to do so. He did help out with interpreting in Moscow on those occasions when [redacted] was busy at TEKHMASHINIMPORT or elsewhere. SHVARTS is about 33 years old, is aggressive, intelligent, and quick. His relations with [redacted] appeared to be good, and he acted towards [redacted] with the respect due a considerably more senior official. 1.3(a)(4)

16. The [redacted] delegation was originally billed as a lecture tour. However, from the very beginning of their visit to the USSR the Soviets said that they wanted it to be the basis for an exchange delegation to the U.S. on a somewhat different basis -- that of visiting mills. Therefore, the Soviets proposed to enlarge the [redacted] delegation's itinerary to include visits to some paper mills. In practice, this boiled down to a visit to one mill, a condensor paper mill near Leningrad. The Soviets then tried to blow this up as grounds for a return visit by a Soviet delegation to ten of the latest sulfite mills in the U.S. The lead in this was taken by ORLOV, the newly-appointed chairman of the Committee for Pulp & Paper, Woodworking, & Forestry, and was faithfully followed by all the GKKNR officials, including [redacted] has urged [redacted] not to agree to such a visit, particularly since the U.S. mills involved represent the latest state of the art, embodying equipment and technology far in advance of anything available to the Soviets in this field, but to insist that any return delegation be a lecture tour like the [redacted] one. [redacted] reported the details of this aspect of the trip to [redacted] feels that it is likely that some sort of an exchange visit by a Soviet paper delegation will take place, but that it will take months to agree on its nature and on the timing and itinerary. 1.3(a)(4)

17. [redacted] did not ring up [redacted] when he was in Moscow at the end of February and he has no intention of doing so in the future as he thinks the chances are 100 to 1 that [redacted] was trying a provocation of some sort. [redacted] has not discussed the incident with anyone, and will not do so. He is scheduled to go back to Moscow around the middle of May with [redacted]; this will be a short two- or three-day trip to 1.3(a)(4)

[redacted] [redacted] 1.3(a)(4)

discuss penalties on a contract and will not involve any contact with GKKNR officials. However, [redacted] has requested guidance on how he should act if [redacted] should turn up to pester him again. We have promised to give him some advice on this score when we have had a chance to analyse his information and to compare it with other recent Soviet overtures to and provocations of American businessmen. [redacted] promised to get in touch with [redacted] before going to the USSR if an unexpected trip should come up before May. [redacted] most urgently requested that the information he provided on [redacted] be used in such a way that it could not reveal him as the source. He also requested that the fact that he reported to us at all be kept in strictest confidence, even within our organization. 1.3(a)(4)

Passport IX-SA No. 601266

1. The passport blank is of our manufacture. In appearance it cannot be distinguished from an original of the 1954 printing (RSFSR).

2. The first two pages are filled in according to the data in a passport actually issued to a certain Vladimir Grigor'yevich BUTOV. The serial number, cachets, signatures, and all entries in points 1-8 are exactly the same as in the passport of the real BUTOV.

3. We did not fill in the "bearer's signature" since we believe it better for you to sign the passport yourself (in BUTOV's name of course): PLEASE DO NOT FORGET TO SIGN THE PASSPORT (p. 1, entry 4).

4. We never had contact with BUTOV. We know about him only that he was a guide at the Brussels World Fair and on the "Gruziya." We suppose that he is still living in Moscow, but we do not know his address or place of employment.

5. The main advantage of such a passport (as opposed to a completely notional identity) is that if there should be any inquiries, the 106th Militia Dept. in Moscow can confirm that such a passport was indeed issued to BUTOV, and that BUTOV was actually registered with them.

6. We had to take the place of work and the address from other sources, since we do not have this data for BUTOV himself. We registered you on Yakovlevskiy Pereulok 11, apt. 13, since this street is located in the 106th Otd Mil. We don't know who actually lives there, but believe this not to be an important point since you will use this passport only outside of Moscow.

7. Your place of employment is GSPI - the All-Union Design Institute No. 10 (formerly of the Ministry of Aviation Industry). It is located on Kutuzovskiy Prospekt 5-9, P.O. Box 1401.

8. BUTOV is liable to military service and we did not want to dream up his military history in order to fill out a voyennyy bilet. Therefore, with this passport you can travel around the country and register temporarily, but application for permanent residence could cause trouble on account of the military registration problem. We are preparing a second set of documents for you under a different name where you will be not liable to military service for medical reasons and will have a document to this effect. With this set you will receive cachets with which you can deregister and disemploy yourself, and will have the possibility of applying for permanent registration if that becomes necessary.

"PENKOVSKIY MEMOIRS"

The "Penkovskiy Memoirs," presented herewith, were compiled from tape recordings made during personal meetings with Oleg Penkovskiy and SR Division personnel. They are Penkovskiy's own words. Although little editing has been done, his comments are not necessarily presented here in the same order or in the same context in which they originally were expressed. His comments on "Soviet Dissatisfaction," for instance, appear together under one chapter heading, though they have come from the tapes of several different meetings. These "Memoirs" give considerable insight into the character and motivation of Penkovskiy, and a wealth of information on Soviet attitudes and "Soviet Realities."

The "Memoirs" will eventually be surfaced, in some form, in the open press. At present, however, they are still classified SECRET.

TAPE NO. 4, Friday afternoon, 9 November 1962 1:35 p.m.

S: As I say I believe that silver hair, D, went out and brought in the 4 goons. The men were ushered in, they were brought to a point on the left hand wall about five feet from the (large???) desk. They stood with their hands at their sides, rather relaxed position of atention and introduced themselves once again by their last names with the prefix Grazhdanin to it. A, the English speaking Russian, had informed them that the AKT had been drawn up and that -- asking them if they were prepared to sign it. They assented and A then began to read the AKT. He read it very quickly and read it to them not to me. The main elements of the AKT were the following: that I had been apprehended on 2 Nov by citizens such and such at the address, giving the Otdelm? number - the entrance - entryway number at such and such a time and had been caught with materials of a I think they called it razvedyvatel- LAGEO
nakazuemoga?? KHARAKTERA

N: Which means?

S: Of an intelligence nature on my person. To the best ofmy knowledge they said on my person, although they had been found on the floor, that these materials, materials which I had removed from behind the radiator in this country.

N: Now on this are you absolutely sure S, from behind the radiator?

S: Because I was waiting for this since I had heard radiator mentioned previously by A as he was drawing up the AKT. And I was listening for this to see if they were going to specify a fact which they could not possibly have known. In other words, this was the point I wanted to get. It seemed to me that this was the key to the whole thing. Would they include a fact/in this AKT which they could not have known unless it had been (discovered?). It was in there. They then went on to specify that these four citizens had taken me into custody and brought me to the militia station where I had been questioned. It was not a long document since it had been handwritten, the 2¼ pages apparently not had been written very closely and it took him about a minute and a half to read it off. I do not recall anything elese in it that was ..

N: Do you recall the precise time, that they said you were apprehended?

S: Let me see. No I don't. It was about 3:15

APPROVED FOR RELEASE 31 MAR 1992

N: By your reckoning?

S: Yes-No I guess it was about 3:17 but I can't remember exactly what they specified. Having concluded, B in Russian, B the Ukrainian (in Russian) said to A, the English speaking Russian who was standing up as he read this AKT to the Russian goons, translate this into English or -- let me see now -- he may have said don't you think you ought to translate this into English. A, ~~I believe~~, said that will be unnecessary. He understands perfectly well. And then, I think, he looked at me and he said Oh no. Now he either looked at me and said either I don't think any English translation will be necessary or he asked me do you want an English translation. I can't recall exactly the way he put it. But at any rate, I said to him I have no intention of signing this AKT whether you translate it into English or not. And then I said, I also wish to say at this time that I have never in my life seen the materials that you have there on the desk. I thought that just for the books I should say this. He just shrugged his shoulders and motioned to the four citizens without further word about asking them if they had any corrections or additions to make. The four citizens signed the AKT. He then, I believe, he sat down with the AKT and wrote out several lines. I believe these were probably notations to the effect that I had refused to sign. Because then the four citizens then came up and signed below this. He then left the AKT on the table, the four citizens left, and F the editor also left without having said a word, without having signed the AKT, just nothing. He left and I never saw him again. A then (?) sat down. I think by this time it must have been almost five o'clock and E, the individual I believe is identifiable with the fifth goon, the man with the glasses. It occurred to me for the first time I think just about at this point, that this man bore a very distinct resemblance to the fifth goon without his glasses who had been wearing glasses and appeared to direct my apprehension. Just at this point it hit me. I hadn't even been thinking about this or even, or even for some reason, tried to identify any of these men in room with the fifth man. In fact I had almost forgotten about him. It was just at this point that it hit me all of a sudden that this man - his face clicked and then I thought almost as suddenly he looks just like the man even tho he was wearing glasses who appeared to be directing it. This man hadn't said anything up to this point. Just after the goons left tho he was standing slightly to my left about 3 or 4 feet in front of me. He just stood there, staring at me. For the first

time I decided to meet one of their stares. So I just looked up at him without smiling or anything emotion on my face and just stared him down. Iguess it must have lasted about two minutes and I just decided that if he wanted to look at me, I was going to look at him and I was going to make him lower his eyes first and he did after about two minutes I guess.

N: YOu are a pretty good starer.

S: I just did. I don't know how I did it because I felt like laughing, I just decided at this point that/in any way which I could do it without talking that I would try to take a little bit of initiative. Then, he looked at me and said, well, you dirty career is finished. I think he said vashe grazniye karye zakonchna. Then D, who was sitting in the same seat and the same sofa to the left of the small table and B who had also taken a seat on the right hand side of the table proceeded to say, yep, career is finished, his dirty work is finished. A little laughter ensued and they one of them, I forget which one it was, said something to the effect that I could now take up a clean profession. chestiya profession. As I say, this dialogue ensued which lasted about a minute or a minute and a half. This was the essential substance of it, that my dirty career was finished and that I could now take up a clean profession, that I just had no future. Then, they resumed this carnival about my name again. Yes. Then B, got up from his chair and once again said now why won't you tell us your name. We need this, we want to put it in the AKT and/in order to get in contact with the Embassy. Meanwhile, E, the goon had taken G, the Ukrainian's seat - interruption. As I said B, the Ukrainian had gotten up from the easy chair to the right of the table and came over towards me, I believe, with my diplomatic card in his hand, but maybe not and E, th goon had taken his seat and he came up to me and asked me what is your name. I think he said something like .....skaye. I said ya ponimayetya and I repeated again I want only to speak only with the American Embassy and then he said what are you doing(?) and why are you afraid to give us your name. At this little cue, E, the goon who was sitting in the chair started mumbling prust prust prust coward coward coward. He just repeated the word coward nothing else, in a very low but audible voice about 4 or 5 times. I just looked up at B, the Ukrainian and still with a puzzled expression on my face/shrugged my shoulders, and looked over at A. A looked at me and he said give us your first name. Then he got up from - A English -

and came around and stood in front of me about - oh no, I guess he didn't get up from behind his desk. Just sat back there - no maybe he did. I can't remeber exactly. I know before this other thing I was thinking of took place he xxxxx (stood???) in front of me, about 5 feet away and asked me why I hated the Soviet Union. He used the word hate. Hated the Soviet Union and the Russian people, that they couldn't have possibly given me any cause for such behavior and that you Americans are suppose to stand for peace and liberty and freedom, yet you behave in such a manner and you engage in such dirty activities. I think at this point he used gryaznoye dyatelnost?? The substance of it was: 1. that why did I hate the Russian - I think he used Soviet Government and I am not sure whether he used the term Soviet or Russian people. 2. That I must hate them to engage in such dirty activities. I repeated again that I wanted to speak to the American Embassy. They then launched into another diatribe about the fact that I sounded like an xxxxxx avtomat and that I should cooperate with them to this extent to give them my name. They then xx asked me again - he then produced - A the English speaking Russian then again produced my card and again asked me if the date at the bottom of this card corresponded to my entry into the Soviet Union or whether this was simply the second card I had been issued. Was this date - the date given on my card later than the actual time of my arrival in the Soviet Union. I simply repeated again that I wanted to speak with the American Embassy. D, the silvery-haired man, and F, the - which x one is the goon E or F,

N:: E

S: The goon had put very few questions to me and said very little throughout this period. I think, if anything, E was actually more - observing more than D. I think he really, of everyone who took part in the interrogation seemed to be the sharpest, although this is a subjective impression, because certainly the questions he put to me were very few and I can't really say that he xxxxxxxxx demonstrated any more technique or persistence than any of the others. If anything less xxxx persistence and so few questions that I couldn't really analyze his technique. I do recall that, I think, that they did put a few questions to me but they were essentially para phrases of those questions which B, the Ukrainian had put to me and that A, the English speaking one had put to me in English. By this time I , of course, feeling pretty confident, because not only had I not given them anything whatsoxxxever so far, but also I

their questions had not gotten on to what I consider to be the only important things that I could divulge; namely, either any operational information about the specific operation which was the most important; and second of all, any information as to the organization which I represented. My past intelligence activities there in Moscow and previously; and three, they had asked me no questions about the Embassy. For instance, personal data about people I worked with, who did I work with, who were my coworkers, who was my chief in the Embassy, I mean my State Department Chief. Who else is engaged in this sort of activity inside the Embassy. None of these questions had been asked. It seemed to me at this point, unless they were intending to make 24-hour affair of this, which I knew they couldn't, that these questions were not going to be asked. It also seemed to me, since their own attitude toward me hadn't changed in the past 2 hours, in other words they hadn't gotten more hostile, they hadn't gotten more forceful. They didn't even seem to be more persistent, that I had, I thought, passed the crisis. I was just at this point concentrating on trying to repeat what had become a boring phrase to me and certainly to them, I want to speak with the American Embassy. Place me in contact with the American Embassy. Just to try to keep in that channel and not get out of it. This was about 5 o'clock. The Foreign Ministry representative didn't come in until about 5:15 and I can't remember what happened in the next 15 minutes. I know that essentially it did not depart from the previous questions which I have already told you about. They were still asking me if I was married - I think once, had any children, what my first name was --

N: N asked a question not recorded on the tape.

S: Yes at one point the A, the English-speaking Russian, after he had asked me this question said, what is it Robert? This was the - what he asked me. He said, What is your name, Robert? I didn't answer. Oh yes yes yes. This was very important too. Then, they said - he asked me how I had gotten there to Pushkin Street. B, the Ukrainian, asked me, How did you get to Pushkin Street? I looked at him with a puzzled expression, shrugged my shoulders, and then he went through this motion, you know, with hands imitating a walk. A walk or with a car -- S Mashinoi. I refused to answer and then E, the goon, said to me that my friends were cruising around the block in the Embassy car and he gave me a license number.

N: Which was?

S: No, no. He d edited. That is all. That is E. I can identify this for you in my report. (S identified E as KOMAROV, Vladimir Mikhaylovich Kovshuk.)

N: How about this one?

S: I'm glad you came up with one so soon. I don't think so,

N: The same one. That is why I had them together. Even in color.

S: You see the thing is with this smile and slightly side view, it is hard because when he was in there, in my report I mention the diagram of this room and also the diagram of the relative positions that these men had in the room at any given time during the interrogation, they all pretty much had their own stations. This man sitting next to the desk, I couldn't really get a side view of him at all. He certainly wasn't smiling during this thing. That is him.

N: No question.

S: In fact N, it looks like the same tie.

N: Let me catch his name for the benefit of the tape, Vladimir M. KOMAROV, or Mr. E. According to your best recollections. Gribanov?

(looking through pictures) I hope these are numbered; good; Go through these carefully and if there is any positive or probable spell out the number on the back. Could you turn them face down they may be in order of some sort.

S: You may think I am going through these fast, but I have these faces in my mind so..

N: That is all right. Are there any that you think that you might like to look at again. You might just throw them aside. (This is group 1 that S is going through.)

S: Here is KOMAROV again. I am pretty sure that this number 167 is not the man but he looks like D when he was about 25 or 30 years old. This is the general facial structure of D. That was the man with the silver hair. Similar, but as I say different enough that I am pretty sure that isn't the man. II Ilichev?

N: That is U 132 whose name is Ivan ILICHEV. (Please note there are two numbers on photos 167 and 132.) We are curious about Mr. A. Aren't we.

Possibly also Brik?

S: That guy spoke English well enough that I am pretty sure that he has been outside. If that guy isn't in any of these I'll look through every photo we have.

Brik had been an illegal in US.

N: This is group 2 (V's) that you are going to look through now.

S: This man V-106 you have the number here as 255. This man, his picture will give you a faint idea of his facial structure (A's) and his head shape. However, this man here has a fairly prognathous jaw which A did not have. However, this is not a bad resemblance -- given the fact that it is now 5 or 6 years. His hair would be about the same shade too.

N: He was never referred to by name?

S: None of these men were.

N: This guy's name is Andrey GRAUR. OK Correct I knew him

S: Well, I don't want to take any chances. V-121. He may be, highkly unlikely but may be identifiable with B. The interrogator who spoke Russian with a slight Ukrainian accent. Highly unlikely. If it is, he is at least 10-15 years younger in that picture.

N: 121 is SMIRNOV, Andrey S. Correct I knew Him

S: This fellow also V-124. This fellow even more likely is identifiable with B, altho once again with the reservation that the picture is at least 10 or 15 years younger than he is now.

N: His name, GUSEV, Andrey A.

S: No more of Group 2.

N: Now group 3. (Y's)

S: This man here possibly Y-2, possibly identifiable with B, the man with the Ukrainian G. His head is just little bit too square and his features not quite sharp enough. I don't think he is, but just possibly.

N: I've got number, his name Boris Nikolayevich BABICHENKO. I know very well.

S: Y-3, his face is very similar to A. His hair, A is balding on the side and in the back his hair was very well groomed, combed very closely to scalp, which this man's isn't, but with a few years difference and a little bit of Wild Root, just possibly. The face is very very close.

N: I wish they would date these pictures so we would know.

S: It would be a big help

N: They may have the info. Y-3 is Ivan A. BALASHOV.

S: Oh boy. This looks like B right here. It is not a complete picture of him. Y-11. This looks like him. That is as close as I would hope to get to him. The picture isn't quite a good enough quality that I could definitely say, but I would say that is 90%. What is his name?

N; Y-11 is Dmitriy Mikhaylovich KONYAKHIN.

S: The nose, the jaw, the hair (the high cheek bone -- ??????) very very close. 90%.

S: Y-19. Bears a strong resemblance to A. But /I don't think so.

N: K.I. PARKAYEV. knows to me

N: That was group 3. This is group 4.

S: V 69 Some slight resemblance to A.

N: Nikolay Mikhaylovich BELOUSOV. ?

S: V 77, Facially may perhaps bear some resemblance to D, but once again with the qualification that this picture looks about 15 years younger. I don't think it is the same person.

N: Vladimir Andreyevich IVASHKIN.

N: Try the second half of same series of group 4.

S: Well I think we already have B in this other picture, but this man also bears a resemblance - is that V-7 (not numbered)

N: V-7, now what did you say about V-7?

S: He bears a resemblance to B the Ukrainian, but I think the other picture is .. better ... this one only 60%.

N: Aleksey N. CHIZHOV.

N: We have one more batch to go thru. The last group was taken at the Powers trial. I don't think those group photos help any because I am not sure we know who they are.

S: No, but at least if we had the face.

S: This fellow here, number 20, without glasses, he bears some resemblance to D, the man with the silvery hair, without glasses.

N: No. 20 the man in the middle wearing glasses.

S: Facial structure, size of head?, hair very very similar, except that that man looks a bit older (one in picture). He looks older than appeardd to me. His hair doesn't appear to be as well groomed or as silver. D. resemblance very great.

N: That's D.

S: These people on these pictures really do look like the types. Once again this fellow here, altho it is not a very good picture bears some resemblance to B, the Ukrainian.

N: To B. The one seated

S: Exactly. Below the man .... inaudible.

N: No. 13 man seated on left bears resemblance to B.

S: right.

S: No one here. I would like to look at all of these again. I would like to go thru all the photos in SR/6/Bio. I know their faces well enough ....

N: That you'll catch them.

S: Yes. They were all in general different types and of course having been there for 2½ hours my impressions are still clear and fresh/ and they will be for long time. For instance KOMAROV. I looked at that guy in the photo and I can still see him staring at me there at the other end of the desk. It were just as if he were back here. That one of B, even tho a bad photo. It just looked so much like him. As I said 90-95 % sure.

N: These could be new characters that have never been out and we don't have photos. I am glad you made the one absolutely positive on KOMAROV and the one 90% on ...

S: And the only reason that I don't say 100% on him is because the photo is bad. If it weren't for that I would say 100%, but there is not much doubt in my mind. Even if he isn't you have a clue there.

N: You didn't have any problems with reporters?

S: NoI didn't because fortunately they were sent the wrong flight number in Paris. They just reversed the numbers. They didn't know which flight I was coming in on. I messed them up, altho not intentionally, by taking an earlier flight out of Paris. [redacted]

N: Isn't that earlier flight a Presidential flight?

S: They didn't say.

N: Well, was it first class all the way?

S: No. Tourist. There were very few people in first class, but tourist was packed. I got to Orly at 1200 Paris and was expecting not to leave until 4 , but I went right to the PanAm desk to confirm my reservation, I did, the man looked it up and said we have a flight leaving at one if you prefer that. I felt that leaving at one, three hours earlier, that could get me in New York at three and I could be down here before closing time in the Office. But then this mix up occurred with my bags, but apparently [redacted] according to a cable over at State, there was a UPI man waiting at New York, for the flight I was supposed to take. This is what generated all the difficulty with the passport section at the Department because apparently this fellow contacted the IN&S people and got my passport number and inquired about this and then they determined that this wasn't my right passport number. They thought something was wrong with my passport.

N: You certainly didn't travel under alias any place along the route?

S: No.

N: Guthriex called me and accused me of instructing you to travel under alias.

S: No. The reason why they couldn't get me in Paris is because the Department had cabled the wrong information or least Helsinki had cabled the wrong info to Paris. Let me put it this way, if it wasn't the wrong info, the code clerk at either end of the line made a mistake. Instead of 358 they put 853. Transposed the numbers. I just very naturally took the first flight out of Paris I could get. I had nothing to do at Orly for 3 hours. As things turned out, this wasn't in my mind at all. I was prepared to say just no comment, just see Moscow for any info. I was glad when I realized that this had screwed them up because at least it prevented another picture getting into the paper getting off the plane in Paris or more probably in New York. They possibly might have printed it again. They have printed enough already. I was met at Helsinki by some Finnish newspapermen and they took some pictures of me getting off the plane and also of me on the landing strip. They asked me if I had any statement to make. I said no. I sk had no comment to make & and t hey could refer all questions to our Embassy in Moscow. They didn't press me. Then they asked me for some personal information which every body else had .....

CONCERNING PENKOVSKIY MEMOIRS

1. As mentioned in an earlier memorandum, we believe that to base the story of Penkovskiy's life on the fiction that he was a KGB Agent throughout most of his career is wrong. In addition to the reasons mentioned previously, in the opinion of those most familiar with the case here, the allegation would not be accepted as true by those whom we most want to impress with the documents--the officers of the Soviet intelligence services and other Soviet officials. The introduction of this element in the story might make it more complicated and difficult to understand in the West. Western journalists seemed to have had considerable difficulties understanding Penkovskiy the man and in analyzing the case based on the facts now overtly available. To throw in this further twist might confuse them totally.

2. We think that not only would the story be more valid, but also more dramatic if it sticks closer to the main facts and to Penkovskiy's own words. The contact report in which he gives the history of his life in some detail, for example, could be used almost verbatim to cover a considerable part of his life. Although details are important to establish the authenticity of the document, the version of his autobiography which we have reviewed seems to include some material concerning the war period that is irrelevant not only to the story, but even to Penkovskiy's life. In general the document does not stress as much as it could those forces which alienated Penkovskiy. There are also some passages which depict Penkovskiy as more grasping and more of a careerist than perhaps in fact he was and certainly more than he need be for the purposes of his story. For example, on the top of page five he seems to rejoice that in 1937-39 the purge of the officer corps opened up room at the top for bright up-and-coming officers. It seems to us that Penkovskiy's motives could be effectively explained by proper stress on the role his father's fate played in his own life; in addition, such instances of secret police brutality as that which caused the suicide of Marshal Varentsov's daughter Nina and the insight he gained into the true attitudes and characters of leading Soviet personalities could suffice to fill in the picture.

3. Specifically, we would recommend revisions along the following lines :

a. Excision of all references to his purported recruitment by the KGB and his work for them as an agent. There are eleven such references of varying lengths on pages 7, 12, 14, 18, 21, 23, 25, 27, 28, and 29.

[redacted] 1.3(a)(4)

b. Having removed the KGB as a source of stress and conflict which caused his disillusionment and defection, we should play up other sources of stress :

1) The fear which was a part of his life from earliest childhood as the result of uncertainty about his father's disappearance. Even as a child he could feel the uneasiness which gripped his mother and his other relatives whenever he asked about his father. This would have been especially evident on each of the many occasions when forms, such as applications for school, Komsomol membership, etc., had to be filled out. The injustice of a system which would hold a boy responsible for his father's transgressions was apparent to him from his earliest days.

2) This fear was the cause of the young Penkovskiy's desire to excel in everything. He felt he had to prove his value and loyalty to the state and to the Party. It accounts for his political zeal, which resulted in his becoming a Commissar. It was behind his repeated volunteering for combat duty in World War II (rather than a wish to escape the KGB), and explains his seeking after medals and decorations--visible symbols of loyal service.

3) The personal tragedies which he witnessed or heard of, such as the suicide of Varentsov's daughter, served to reinforce his fear. When he became aware of a clear case of injustice he at first tended to regard it as an act of fate. Later in life, he began to regard those instances as defects in the Soviet system itself.

4) He was eager to enter the GRU when he got the chance as this was another seal of approval placed upon him by the state and Party and lessened his vulnerability.

5) Though he approved of the post-Stalin slackening of controls of the USSR, the execution of Beriya and the curbing of the power of the KGB, he was sickened by the hypocrisy of the Soviet leaders who had licked Stalin's boots when he was alive and who now attack him in speeches and in print, yet who in practice continue many of the worst aspects of his repressive policies. He interpreted the denigration of Stalin simply as a political maneuver by Khrushchev in order to consolidate his power.

6) Penkovskiy was sickened by the brutal and unjust treatment of Marshal Zhukov and other loyal, capable officers who had served their countries long and well by Khrushchev and the Party.

7) Having reached the upper frinpes of Soviet officialdom, Penkovskiy was disgusted by what he saw and experienced there. Intrigue and conspiracy, influence peddling, apple-polishing, gossip-wongering, character assassination are normal everyday tools of the trade for young Soviet officials trying to get ahead. Penkovskiy felt obliged to fight back with these same weapons and actually was good at it, but all the while he was sickened by it.

8) His service abroad and his contacts with foreigners gave him an objective frame of reference within which he could criticize the Soviet system.

9) When he was finally confronted with the fact that his father had served in the White Army and was killed fighting against the Reds, he thought that his years of loyal and valuable service would prevent this fact from being used against him. He soon learned that this was not the case. He got no more promotions; he was removed from or turned down for key positions which could have led to further advancement of his career. The injustice of punishing a son for the sins of his father in this fashion served to catalyze the other elements of his hostility to the Soviet regime.

10) He came to see the Soviet regime as a festering sore which was infecting the entire body of Soviet society, as a power system interested only in the perpetuation of power, as a hinderance rather than an aid to the Russian people in their fight to achieve their destiny.

c. The result should be a ringing indictment of the Soviet system. It should try to show that a human being with a conscience in Penkovskiy's position must turn against the system or lose his self-respect.

d. We should cut out some of the lengthy discussion of the history of the second world war and follow more closely Penkovskiy's own words at the first meeting, when he discussed this time of his life.

e. We should incorporate whenever possible Penkovskiy's own words and phrases from the tapes. We should also include personalities, names, anecdotes and experiences, all genuine from these tapes. This should help to make the document come alive more and the characters mentioned in it appear more as real people.

4. We feel that the material already extracted from the tapes and compiled in 12 chapters under the heading "Penkovskiy's Memoirs" should definitely be included, but that its present form and organization is probably not the most suitable. Tentatively, we

suggest that it would be better to build up to the chapter "Be Firm With Khrushchev" by leading off with the chapters on "Berlin," "Soviet Leadership," "Political Control of the Armed Forces," "The Soviet Marshal," and "Opposition to Khrushchev in the Army and the Fall of Zhukov." The remaining chapters might be then arranged as follows: "Soviet Rockets," "Nuclear Weapons," "Soviet Intelligence Activity," "Sino-Soviet Relations," "Soviet Policy towards Underdeveloped Countries," and finally "Soviet Dissatisfaction." Considerable editing and rearranging of material within each chapter will no doubt be required. In many passages, for instance, it is obvious that Penkovskiy is talking directly to individuals who are representatives of the U. S. and British governments. Such passages must be changed, and Penkovskiy must seem to be addressing whatever audience is suitable with the cover story for the document's surfacing. Also, in editing this material, we must give careful attention to the question of time. The statements were made over a period of several months. Some statements refer to historical events which had not yet happened, and other statements refer to the same event after it had happened. All these statements must appear to have been written at the time when, according to the cover story, Penkovskiy says he wrote them.

5. We would like to consider adding to the volume some of the documentary evidence, a question we plan to raise with your representative who is scheduled to visit here in July.

Read file Chap 17 Jan 26, 1963

8. Mr. McCone then turned to the Board's question on implications of the Penkovskiy case as they relate to British and U.S. security. He said that Penskovskiy provided us intelligence from August 1960 through August 1962, and gave us more than 8,000 pages of translated reporting, most of which constituted highly classified Soviet defense documents. He stated that the case did not have any security (*) implications for Britain or the U.S. as this was a controlled agent recruited by CIA and shared with MI-6, who we got into the circuit because the contact was outside the USSR and we used London on several occasions for meetings. Dr. Land asked about the motivation of Penkovskiy, and the DCI replied that it was primarily emotional--that the man resented his failure to advance higher in the regime and was motivated to work against the present leaders. He noted that the British had taken the principal rap of the case because of Wynn, who was a courier working for MI-6. We think that the case was blown because of a penetration in the British government who saw Wynn and Penkovskiy together. We also think that Penkovskiy got careless and when they searched his apartment they found all of the espionage equipment. Mr. McCone noted that they had picked up a couple of our officers and in one case implicated a clerk who had been sent to service a letter drop, but had let him go after brief questioning. These had all been png'd. He noted that Penkovskiy had no access to either FBI or CIA personnel. Mr. Coyne asked if Penkovskiy had initiated the initial contact and was there any danger that he had been planted. Mr. McCone replied that this was something that we always feared, that we had checked his bona fides extremely carefully, and held up dissemination of reports in order to insure their validity. After most careful checks with all other types of intelligence, we had come to the conclusion that this was authentic.

*added by Mr. McCone.

EXCERPT - [redacted]

[redacted]

PENKOVSKIY OPERATION, PARTS 3 and 4 Taped 22 October 1966.

Now, the first few days were a furor, not only in finding out what made him tick; what he wanted us to do for him; what he was willing to do for us; but to analyze in the greatest of detail from his own notes, what all the little abbreviations, hieroglyphics and everything were, on some one hundred fifty pages, some typed, some written, of misselery. The people who understand this subject from a scientific viewpoint completely, they would of course, analyze everything that they needed to know themselves, but we could at least contribute this one effort of expounding and extrapolating every abbreviation that wasn't clear, but which he, having inserted, knew about as to what he meant when he put it in. This was a monumental job. I don't remember seeing a tree between London and Leeds, because in a jiggling car, as I was yapping from Russian as to what this particular R-7 missile would or wouldn't do, and Bulik was writing with the others, which was in English, we never had a chance to lift our heads.

We barged into the hotel, had a meeting set up there, met him, went on to Birmingham. In Birmingham we had a technical flap with the British, but we managed to luck out. We took along two large suitcases, hand bags I should say, much larger than this, with Mohawk, battery operated recorders, just in case we would need them. Unfortunately, they are albatrosses, because we had no place to leave them, except the U.S. Embassy. Therefore, in the hotel room, someone had to be with those damn pieces of equipment. On travelling, we took them along. Well, when we hit Birmingham on a Sunday night, the Scotsmen came in with some very incongrous expressions which sounded like "whir oh whir, we are in trouble," - we had hit the tail end of the world in England. This part of the town, the center part, is still on direct current. I have no place to get a converter at midnight on Sunday and the tape recorder can't work.

So, we said, "however, for three thousand miles we have carried those damned instruments of ours on battery. Let's see if they can pick up the slack." So we ran eight reels, and they

APPROVED FOR RELEASE
31 MAR 1992

all came out. One from one machine, one from the other, alternating to cover our four hour meeting. So, even then, it was worthwhile taking them along on the trip, they appeared superfluous at the time, we were glad when we realized we could tape this, not only overtly, but with superb electrically operated equipment. That's just a side light, and having analyzed everything he had in his notes we had one of our top men, a very heavily and well decorated one, even though he is a reports officer. I would love to mention his name because he is one of the most distinguished reports officers I know of, his name is Len McCoy. He had spent time at Cape Kennedy, Thule, , Churchill, all the air force bases, he is quite an adept and knowledgeable person in anything relating to misselery. He came out to give us all the requirements and processed the material as fast as he could. The British were so impressed by him that they permitted him to handle all the British requirements. They threw up their hands, he was so much head and shoulders above them that they accepted anything that he would. Of course we would need him, not at the meeting with PENKOVSKIY but after the meetings. We tried to transcribe the tapes, but it was totally impossible. When you have a meeting of four hours, onee a day, it would take six months to finish all the tapes after we brought them home, because they were just catching up ahead of us all the time.

Well, amongst other things that he told us about, all of the associations we reviewed carefully with Marshall VARENTSOV. We began to tabulate his unbelievable accessability to highly classified documents. First, he had a complete entree to the fund of GRU, which is the classified library section of their intelligence organ. He could read anything on missilery in the headquarters of Marshall VARENTSOV. who was there as his adjutant, about to become a general, would just unlock the room and say "PENKOVSKIY, I know you are writing a book in Russian from the English on missilery, that's why you have all these research privileges. Please be my guest. Don't take them out, but read anything here." So we were getting a

pretty good idea of what their ICBM's could do, where they were, about the Cuba situation and what their missilery there could do, almost straight from the horses mouth. In fact, there was a publication (I will make a more complete reference to it later) called the Strategic Missile Bulletin, on ICBM's from MOSKALENKO's shop. MOSKALENKO at that time had two hats. One he was on the General Staff of the Ministry of Defense. Remember, they have only one ministry, the Army, Navy, Air force are all under it. The first hat was, he was the first deputy to the minister for all new technical developments and means of mass destruction and so forth. The second hat was at the same time he was the Commander in Chief of all Strategic Missile Forces. That is, all the manpower and officers and so on, who are scattered at the various ICBM sites. You know already what VARENTSOV's position was, but they are closely related. In fact, outside of the tremendously complicated geometric and geophysical machinery and computations for guidance systems, the ICBM Russian style is an expanded, enlarged practical missile, and probably is in all countries. We didn't get yet into space technology thank God, because that would have been just too much to swallow.

Anyway, next we had brought over with courier service suitcases full of photographs. As I remember we had covered something like 7,000 available photographs from all the assorted files of CIA, MI5 and MI6. These were all categorized by countries, when last seen and he identified maybe 7 to 10 per cent of these people. The total number of GRU officers in detail, depicted, described, identified from photographs, etc., was somewhere over one thousand. The KGB numbers were less, some two or three hundred. Of course, the rosters of everyone who was ever in Turkey before him, during his time and currently was like knowing his five fingers; not to mention everyone on the India, Pakistan, Ceylon, also Iranian and Egyptian desks, and the field stations; as well as everyone in London, and later as you will see, everyone in Paris. That was very, very significant. This is of course from a CI viewpoint, but his

greatest contribution, as it became more and more developed came strictly in the PI field.

Alright. During this period we have consolidated all possible ways of recontacting him. We knew he was going to come back here. He had a scheduled return, knew there would be a very short interval. We knew he was coming back per schedule to London without a delegation, alone, for the purpose of establishing a program for a later delegation. This gave him even more latitude and freedom of action, and this time he came very heavily reinforced with influence from back home. He was called in by Army General SEROV, the Chief of GRU, and, as I mentioned before, the former Chief of KGB, and told "PENKOVSKIY, my wife and daughter are taking a trip to England. I know you will be there at the same time. Please keep a weather eye open for them and make sure there is no difficulty." "Yes sir, be glad to do it." Naturally, the Soviet Embassy gummed up even having a car waiting for them when they arrived, but PENKOVSKIY did not. He took them to the hotel, he wined them and dined them. He did everything, except he over did it. He began to play "footsie" with Svetlana, and I begged him on my knees almost, "This is not the girl for you. Let us not complicate life." "But she likes it." "Look, PENKOVSKIY - Pozhaluista - there are others. Not this one." Anyway, I'm not going to get into that phase of life. He is very human, very normal, he likes to flirt a bit. Anyway, he made a terrific hit with Mrs. and Miss SEROV and loaned them money because they ran out. He made sure they ran out. So they shipped all kinds of stuff home, heavy freight, by boat that was parked somewhere in the Thames River, such as a swinging artistic sort of affair for the garden. I remember personally purchasing a beautiful V-cut sweater for the General for the General to play tennis with on the courts at his dacha and then we went into a shopping list which was out of this world. He said "I need help. This is operational." But the list, the list was not a piece of paper. It was a book. A book. And neatly depicted page by page were items for who for what. In the middle of it there

outlines of a foot, his wifeb foot, his daughter's foot, his mother's foot. Who knows these English sizes.. The foot. So we had to get shoes, sandals and so on in all sizes and description to match that. He needed a suit so we measured Mike Stokes who looks something like him, back to back, a little shorter and he went to Oxford Street and got a suit for PENKOVSKIY. But the list, finally, I'm not going to describe the details. They are too unbelievable, but there were about 4 suitcases of about 70 kilo, 70! That means well, how is he going to take it home? A cinch - no problem. Well, here is how he did it. WYNNE took them in on his official trip, between meetings. He met WYNNE at the airport. He had every pass in the book and when the custom officials were there, he said "Don't stand there like apes. This is a guest of the Soviet Union. Help him carry them." They were all carrying them into his car. So as he delivered WYNNE to his hotel, passing messages from us and giving him cachets in the car, he drives off with the rest of the baggage, to his home, for further distribution there. WYNNE would immediately proceed to the British Embassy, without even washing his face and hands, and his own personal little baggage there they could search to the hearts content, he would deliver everything, he would be clean, and on the return trip the messages would come back in reverse. So that was ideal. That is how he got them in. No problem.

Well, what did we get. We got, for about 25 pounds, a rocket, a beautiful rocket, for the birthday which was actually on the 16th of September, although the birthday was on the 3rd. You see, you had a calendar switch about 13 days. VARENTSOV was about to get an Order of Lenin, already he did have the title of Chief Marshall, on his 60th birthday, which is very customary for high-ranking people in Russia; as I read to you from this order which happened to PENKOVSKIY's great uncle. For this day and occasion PENKOVSKIY was nominated to be the major domo. He got the singers, he got the dancers, he got the whole list of guests and naturally he had to present his own gifts too. He got a gold watch and he immediately wanted it engraved "To dear Sergey Sergeyevich from the Penkovskiy's". I said we could not

engrave this in London. We have no cleared engraver. We could do that in Moscow. He argued "What kind of an intelligence service, you can't even put this on?" "No!" That he had to take back himself. The big rocket was a silver thing - beautiful - you press buttons here - cigarettes come out - cigars come out and light. It's one of those sort of things. It was very appropriate for VARENTSOV, but the piece de resistance was something else and this gave us a TSS problem. He waanted a bottle of the rarest Napoleon-type brandy cognac exactly brewed 60 years ago on the date of his birth. Oh with 50 years we could do, but 60 that was a little more difficult. However, with 4 case officers, which it took, outside of us for support, to buy all these things every day; they were coming home with buckets of assorted material; with the help of TSS on the label we got a 60 year old bottle. This bottle paid for itself many, many times over, during that cele radion for his 60th birthday. One of the first guests to enter was Rodion MALINOVSKIY, Minister of Defense. No one was there with less than two stars. One poor little was there with two stars, who has long since retired for all times sake, KARIOFILLI with three, Chief of Staff of the Rockets, this, that, Marshalls. From the Central Committee side CHURAYEV, the poor peoples representative at the Central Committee level, who has a dacha with 20,000 roses - the poor communist society - he even bragged about it at the party and got drunk. MALINOVSKIY made a bee-line for this cognac, "This is better than our vodka," and he was slopping up our cognac like mad. At the same time he was predicting, depicting every thing he was going to do with the Berlin Wall; how he was going to do it and how the Americans would swallow that pill, and he was prepared to make us swallow a second pill if KHRUSHCHEV wanted to press a different button; namely the second pill would have been to sign a seperate peace treaty with East Germany, by prolonging the maneuvers of the Warsaw Pact nations by three more weeks, 250,000 men strong. However, KHRUSHCHEV himself, passed that one up. The first one, when it was reported, we told them exactly how he was going to do this, how we could stop it like a clock, probably for the cost of $200 worth of gas, but it took

Washington three months of deliberation before we could give any sort of definitive answer for what to do in Berlin. All kinds of speculation about future nuclear wars was discussed at this meeting. They felt completely free, oiled with our cognac didn't harm a thing, fortunately, so we had a complete report on this. This high level access, other than the tremendous amount of documentary material was what was really helping us out all the time and he was delivering them to us in cachets.

Now, at this second go-round of meetings we had to retool the whole operation in terms of secure future contacts, and the receipt of this invaluable material that was now in huge volume. First of all, we had a Minnox camera especially prepared. A gentleman in the Ninth Bridge, an excellent technician, British more or less froze the "f" stop at 8, you could click off of it; more or less froze on the (fiftieth "D") speed, we had a template in centimeters 21 X 17½ where the brown fringe of the eye piece would adjust you are in focus. It takes practice but you are on focus, you can throw away the chain, which is a security risk if you are going to clandestinely carry the Minnox, the more chains you have the more complications you have, so you eliminate three variables. All the training then took place on the steadiness of hand and estimation of light. As a result,the man produced something like 5,000 perfect frames. One frame had two bottom lines cut off. It became so hairy with this accuracy, we wondered "could it be possible the KGB is doing this." So at one of the meetings, after we got the cachets, in London, we threw him one just like that - "Catch" - "Take picture." "Where" "That wall, that map, this map, this magazine." We were brewing tea now. Every four o'clock is tea. We are in Britain you know. We are taking time out for tea, and you have this done. In about 15 minutes with the steadiest of hand, "I'm done." He even squeezed out 55 frames from a 50 frame roll in a Minnox. You can do this, but you have to have an awful lot of practice. He threw it back to us. Tomorrow we will see. The next day in gloss prints this big the Ninth Bridge brought them

developed. Out of this world. Out of this world, like a photographers masterpiece. Well, obviously he can photograph. Whatever he learned, he learned well. I do not mean he can run 15 kinds of photographic apparatus, but the one he knows, he knows. The same thing with the Russian version of the one time pad . We practiced with them. This is all done by us. We had all the commo support in the world. A member in Frankfurt gave us test messages. He would finally break it out. Naturally, he had the "yo yo 51" with the Russian coding-decoding system, one time pad, and with it in this interval he came back with a little typewritten message. In it he had gummed up one word, one word - one letter. Begginning - he said "mosh" instead of "nach" which means nothing really, beginning or our number one. I said "Becareful with our 32 instead of 33 on yo yo." "Yes, I'll not do it again." The rest was perfect. I thought "Well, gosh darnit, who is breaking this code." Again, it took me three hours to make two different type messages, old book, new book. It is the difference of one group. Again, we are brewing tea. I said "Here is a test pad. Break these messages." In 15 minutes he had both messages done. Perfect. The man is a technician. So in one phase of commo, in one phase of photography the man was absolutely superb. I've never seen one like it and never expect to again in my life. But, with his photographic capability (and he is a three Minnox man - he would send one in for repairs on occasion to us via channels - might as well be hung for one as well as three - and why change cachets in the middle of an important operation) when he would go into the GRU room, ask for quiet, "don't disturb me", he looked for certain things of interest. "Ha, a bibliography. I wonder what kind." Looks it over. In about two or three frames he had a bibliography of every document stolen from the United States, and the correct title, right down the line. Military manuels, all other kind of documents that had a classified value. The hell with the documents. They are ours anyway, but now we know what's been stolen from us. The same from the French, The British, the Italians - the bibliography. How many frames does it take to

take a bibliography. Peanuts! He got us all the classified directories of the Kremlin; what you call here the gray line, the red line; complete, who's on it, what number, how they cross connected. Well, it took us four frames for the whole thing. Directories - that's big those directories. So he got us nine assorted classified telephone directories. A complete volume on everybody as to his background, history, Academy of Science of the USSR, and its' filiale in Siberia, and eight other directories; Ministry of Defense; Government of the USSR; KGB; GRU; Internal , those are the internal dialing systems of three and four numbers. It was really fantastic. Well, now our idea is "How shall we keep this thing going?" "What channel?" At this point of history, the wife of an MI6 officer Ann, was brought into the act. She was stationed in Moscow. Ann came and was introduced to PENKOVSKIY in London. Now here is the gimmick. He had gone to a scientific gathering. There was an officer by the name of Mr. ?SENIOR?, actual name, British, and he was ordered to go there and report and he met Ann. He went to the UK Embassy and again said "How do you do" to Ann. Therefore, she was, her last name was CHISOLM, on their interest list, They had a dossier on her. He had an official reason to meet with such people because he was sent there. We didn't like it in terms of frequency of meetings, outside of official functions. He said "Well look, if I meet her on the street, tip my hat and say , talk to. I'll make a report on it. Of course I say hello to someone I know officially. This will give me a chance to pass something." "All right, you can do this once or twice, but beyond that you are gambling." The British say "And what do you have American, besides a big mouth?" They just about were as nasty as that. We didn't have very much going at the moment, but on the road we had plenty in what we call the pipeline. Our object was to get an appropriate man,in the Embassy under the appropriate cover, which was a big headache; to whom PENKOVSKIY could be officially sent by his people for official business. Then, we have no clandestine, risky meetings outside. It's a beautiful thing,

Except that you can't schedule it always and except that you can't predict the frequency of the meetings. That was our concept and we held out for it as long as we could and we also injected into the plan to have such person or persons available. In the meantime, Ann was briefed that "when the time comes, you will do this." "Okay." We didn't need her when WYNNE was going back and forth because that was completely blessed by the GRU and the KGB for that matter, as official. Fine.

So, time goes by and we get a message through WYNNE that pretty soon he is going to the French Exhibition in Paris and he is loaded with cachets, other than what WYNNE has already picked up. We are getting all these things all the time and we are drooling. Fine, but this was an awful beating because although it says the 20th September it was the 14th October for the twelve meetings. We were before 1 September. We didn't know when the French would give him his visa. We could not hurry them up or show any interest and the French were playing fancy reciprocation. You make us wait three weeks, we make you wait three weeks. So he is furious. What are they, Allies or not? I mean, after he told us "Why the hell you keep me bouncing in place in Moscow for three weeks?" Well, we were bouncing in place in Paris for the same time, letting things develop normally. In the meantime, we had cased more safehouses and more meeting sites and everything else that we needed in Paris than you can imagine. There, unfortunately, the British have assets far and away above anything we could dream of in the way of safehouses, support assets and everything you want in Paris. After all they are close to the continent themselves, they have been there for many, many years and they know how to operate. So, (garbled) the British safehouse, the British vehicle, a lot of them hired, a lot of them right hand drive, Everyday I went from Orly to Le Bourget and back, a beautiful distance of about 40 or 50 miles through French traffic; we had a special driver Roger King, who drove (garbled), he was a race track driver; when necessary he would go 60-70 miles a hour

respect for you in his mind. All right that is fine for a fellow who might want to work with you or defect. There are the in-betweeners for whom the timing is off, the concept is ripe, but the timing is off. Family situations, obligations which may change. He might say like PENKOVSKIY said "If you see Colonel Peak, give him my greetings." Maybe Peak/did a great deal without even knowing it himself, of putting some seeds of thought to cooperate with us in PENKOVSKIY's mind. Someone else may get the credit in the future for the contact, but there is where the seed comes in. So don't pass up the (garbled) if the guy doesn't want to play ball because he can't at this time. (garbled portion) but he can't telegraph to you now or to anybody else his views. Of course, in the case of the fellow who never would, you still have an asset to generate by creating respect for you. At the very outside he who hates the United States might at least tell another Soviet "You know, all Americans aren't sons of bitches. I met one who wasn't," and even this is a plus by having this or desire to the Soviet. How do you do this? No two people are alike amongst us and no two Soviets are alike, but as an objective, how to impress favorably the Soviet, try to generate a concept. I just quote his own words ".....respect, he was dignified, he could keep a confidence, and I could trust him." So, I think as a piece, as we teach down south, to quote someone like this is far more meaningful than to generate concepts of how to get along with a Soviet from every other possible self-generated psychological Anglo-saxon background thinking. It is not quite the same thing.

PROPONENTS OF THE DOCTRINE OF TOTAL ESPIONAGE

[Following is a translation of an article by F. Sergeyev in the Russian-language journal Znamya (The Banner), No 12, Moscow, December 1964, pages 210-229.]

Nobody gets pleasure from dissecting the souls of traitors. But every instance of treason, no matter how seldom such cases occur, is always instructive. They make it possible to judge what sort of persons are recruited by the enemy and to learn our mistakes in selecting individuals for membership in units which are of interest to enemy Intelligence. We are now speaking of an officer who served with Soviet troops abroad. We will only use the first letter of this traitor's last name because his family, which had no part in his foul actions, still lives among us.

[redacted]

The former officer of the Soviet Army, Lieutenant Colonel P. was shot two years ago. But he began to die earlier -- five years before this, during the time when he began to collaborate with American Intelligence. He died a little each day from his fear of discovery, from self-degredation, from self-alienation. Each day, he would put on the overcoat of his uniform and report for work, greeting his comrades. But he was their enemy. The information which he collected and passed to American Intelligence worked against the very country which he served. During monthly meetings with his chiefs from American Intelligence, he received instructions together with envelopes containing the Judas pay he was given in return for his notes. But things didn't reach the stage of passing notes at once.

[redacted]

During 1958, while stationed in Vienna, P got involved in a love affair with one Emilia Kohanek without the knowledge of his family and comrades. She was just right for P.: She made no claims on him, asked no questions, was obliging, and (P., of course, didn't notice this) she was shrewd. The Lieutenant Colonel didn't hide from her his admiration for the "bright" life of Vienna, for the show windows of expensive shops, for the splendour of luxurious restaurants. When he was transferred from Austria to a city in East Germany, Emilia began to write him. She didn't miss the opportunity to send a birthday card remining him of the happy days they had spent together in Vienna. Other times, her letters were sad, but all sounded sincere: She did not conceal her desire somehow to meet again to reminice about old times, "to relive the rest", if this was agreeable to P. All this seemed so convincing that Emilia succeeded in getting P. to agree to a secret meeting. It was arranged that Emilia would travel to West Berlin and that P. would arrange for temporary duty orders to the East German capital.

After he arrived in Berlin, P. changed into civilian clothes and secretly left his station for the Western Sector in order to meet his loved one. Emilia Kohanek failed to appear at the prearranged place. But there were others there: Two hefty American Military Police agents arrested P. When they were done with him, it was not P. who returned to the East German capital, but the American agent "Max". "Max" told the following story during subsequent interrogations:

[redacted]

Approved for Release
Date JULY 1993

Penkovskiy file in

[redacted]

"On the day we had set, I arrived on temporary duty in East Berlin, from where I went to West Berlin without the authorization of my commanding officers. However, rather than Kohanek, two unknown men in civilian clothes approached me at the prearranged spot and presented credentials of the criminal police. After telling me that I was in the area of some sort of secret installation, they invited me to go with them. I lost my head, got into their car, and, after a few minutes, was at the headquarters of the American military police. During the interrogations, which lasted six hours, the Americans told me that I had been caught red-handed as a Soviet spy and that, should I refuse to cooperate with them, I would be sent to the West. Moreover, they told me that, since I had crossed the zonal border without a pass from my commander, they had every reason for either telling the press of my escape from the USSR or for returning me to the Soviet authorities as a person who had asked the Americans for political asylum. Either way, my family would have suffered. Having no way out, I accepted the proposal to become their agent."

From his fitness reports, this traitor seemed to be practically a living angel. But, as sometimes happens, the people who wrote the reports were aware of his true character. They failed to give timely attention to his negative qualities, which could be dangerous under certain conditions. It was known that P. was egocentric and secretive, that he lacked common, everyday courage in relations with his comrades, that he was a obviously weak individual. All these qualities, taken within the context of the complicated situation in which he worked, attracted the attention of "hunters" and made him a target of American Intelligence. And he was weak, surrendered, and became a traitor.

"The American Intelligence officer who recruited "Max", Lieutenant Colonel Shernhorst (really Cary Grosmen), told him that it would be his job to collect information on our armed forces and, more precisely, to betray our state secrets. His chiefs gave him secret writing materials, code books concealed in a hollowed-out spinning bobbin, and communications instructions. And he worked for them until he came to the attention of the organs of State Security. And this is how it happened:

[redacted]

Russell August Lenghelli worked at the US Embassy in Moscow. As a diplomat, the father of three children, and an attentive husband, he led what seemed to be a completely decorous life to those around him. Every morning he would set out for work at the Embassy; in the evenings he would familiarize himself with the city and, on nice days, he would take excursions with his family. Nothing, it seemed, would indicate that, besides his administrative and managerial duties, for which Lenzhelli was accredited to the Embassy, he had other concerns. But a number of Lenzhelli's actions convinced State Security that his official position was merely a cover for other functions.

Once, during the summer, a special miniature container holding instructions and money meant for an unknown American intelligence agent, was found to have been left by Lenzhelli under the handrail of a stairway leading from Lenin Hills to the Moscow River. Lenzhelli covered this "operation" by an innocent stroll with his wife and children.

And thus the innocent family man came under even closer scrutiny by the Chekists. He continued to stroll about the city during office hours, when he should have been at the Embassy. Frequently, his wife accompanied him. Clearly there was a purpose behind this -- the wife served as a lookout for the intelligence officer. The behavior of the American woman showed this. Once, stopping his car, Lenzhelli boarded the Metro with his wife and rode back and forth along a rather complicated route without any clear

[redacted]

[redacted]

[redacted]

purpose. Such behavior might seem odd to the uninitiated — after entering a car on the Metro, Lenzhelli would suddenly jump off, pulling open the already closing doors, and run to another platform. But the professionals had no doubts: Lenzhelli had detected surveillance. After finally getting off the Metro, he approached a bus stop and stood next to a Lieutenant Colonel. For an instant, their arms and hands touched. A small package suddenly appeared under Lenzhelli's arm. This Lieutenant Colonel was the same "Max". Up to this time, nothing was known of his relations with Emilia Kohanek, about his trip to West Berlin, or about his subsequent meetings with American Intelligence officers. P. was now placed under observation together with Lenzhelli.

A documentary film has been made entitled Snova po chernoy trope (Once More Along the Black Path). Some scenes in this film are taken from the Lenzhelli-"Max" affair, though the episode concerns another of their meetings -- in the entrance of the "Astoriya" restaurant (now called the "Tsentralnyy") on the corner of Gor'kiy and Nemirovicha-Danchenko streets in Moscow.

[redacted]

The camera shows a crowd of Muscovites strolling along Gor'kiy Street. A young man has his arm around a girl; an old man is opening a package of cigarettes; two men are conversing near the window of a book store; finally, we see the hurrying feet and shoulder boards of a Lieutenant Colonel and then a full view of his face. Something is bothering the officer. The camera moves only infrequently to the other people -- the Lieutenant Colonel is the center of attention. He approaches the door of the restaurant and glances inside. It is clear from his expression that somebody is late for an appointment. He nervously paces the sidewalk.

[redacted]

An automobile of foreign make slowly moves along an ally. Stopping the car, the man behind the wheel gets out and offers his hand to a lady getting out the other side. The camera takes in the entire scene. Then it zeroes in on the hand of the man; he hugs the woman tenderly around the waist and, with quick fingers, takes something, a small packet, from the pocket of her jacket. The pair enters the vestibule of the restaurant and "Max", with whom we are already acquainted, rapidly follows them.

A long-range shot (for obvious reasons), taken through the large glass door of the restaurant, shows a public telephone. Apparently, the Lieutenant Colonel and the man who has just driven up want to use the phone at the same time. What's this? The same packet, which we saw in the hands of the foreigner a moment ago, is now held by the Lieutenant Colonel. But they don't seem to know one another. In any case, the camera, which has had them in view the whole time, didn't notice that they greeted each other or gave any other sign of recognition. And they separated like complete strangers. But we already know, as they say, that they have met before "behind the scenes". "Max" told all about this during the investigation: "In April 1958, Sharnhorst introduced me to an American Intelligence officer, who used the pseudonym "Daniel", in Berlin. This was done in case I were to be sent back to Moscow. "Daniel" gave me a private telephone number in Moscow and two set phrases to be used to call him to a meeting...."

The people filming this documentary had no doubts that this P. was a traitor and that Lenzhelli was the person to whom P. was passing espionage information.

But this is not enough. It was necessary to catch the criminals red-handed. The "sincere indignation and perturbation" expressed by certain American diplomats, when they are accused of unlawful activity, is well known. Irrefutable proof is necessary. And it was gotten quickly. As usual, at 8 o'clock in the morning, Lenzhelli left for the bus stop on Kutuzovskiy Prospect on his way to the Embassy. "Max" was waiting for him at the bus stop. Standing in different places in line, they got on the same bus. A Chekist jumped on the bus after them. At the moment when Lenzhelli moved toward the exit, passing the Lieutenant Colonel, the two exchanged packages unseen by the other passengers. The Chekist gave a prearranged signal to his comrades, who were waiting at one of the stops. On leaving the bus, Lenzhelli, together with the package which he had received from the spy, was instantly ushered into their car. Two stops later, "Max" was also arrested red-handed. Thus ended the short-lived collaboration of "Max" with American Intelligence.

* * *

In their book The Invisible Government, the American journalists D. Weiss and T. Ross write that "US embassies around the world have secret floors or departments where CIA missions are located. Each mission is headed by a chief and includes several intelligence officers. CIA employees are included among State Department or diplomatic personnel. This is their "cover". Is further proof necessary of the indisputable fact that, following the example of Nazi Germany, the ruling circles of the United States have transformed their diplomatic apparatus abroad into a tool of espionage? In crude violation of generally accepted standards of international relations, the Central Intelligence Agency is increasingly subordinating American diplomatic representations to its own interests.

If this is characteristic of the US diplomatic service in other countries, it is particularly so with regard to the American Embassy in Andmilitary attaches in the Soviet Union. What are the facts? There are as many as you want. What relation to the conduct of diplomatic functions can the following lines from the diary of a diplomat possibly have?

"8 January, Monday: Drove to the southern edge of the city in search of antiaircraft batteries, but found nothing in the new regions. 12 January, Friday: Drove all morning with Tornal and Abbel through the southeastern part of the city in new areas. Didn't see a single antiaircraft battery, but collected some good information about the locality. 20 January, Saturday: Bush and I drove for three hours through a snow storm in the eastern and southeastern parts of the city; spotted three antiaircraft batteries. 27 January, Saturday: Because of poor visibility we didn't carry out any reconnaissance; wrote two letters and a report on the location of the antiaircraft batteries in order to have them ready for the diplomatic pouch. 28 January, Sunday: Got up at 10, had breakfast, then took the Metro to Ring B, strolled for an hour in the area of Frunze Academy; didn't see anything new if you don't count the old calvery stables where several horses are apparently kept. 15 February, Thursday: Tornal and I carried out discreet observation in the industrial regions in the northern part of the city, but failed to locate a single antiaircraft battery. 24 March, Saturday: Tornal and I checked the presence of antiaircraft batteries, two of which have been removed. An industrial enterprises is under construction at their old location".

[redacted]

These lines are taken from the personal diary of a former US military attache in Moscow, Major General Robert Grow. The diary, which was lost by the unfortunate general and eventually was made public, can be called sort of a "bible" for American intelligence officers. In it, Grow had written "our intelligence organs must constantly seek to discover and report both the strong and weak points of the enemy. Our attack must be directed to the enemy's weak spot. Although the military services are primarily concerned with the question of weapons and methods of waging battle, we must understand that this is total war and it must be fought using all means. We can win this game if we organize an attack of a political, psychological, economic, and subversive character. We must understand that it is permissable to hit below the belt...." Indeed, Grow not only was without scruples when choosing where to strike, but was not adverse to collecting the most elementary types of information. For example, during a trip to Yasnaya Polyana, he noted the numbers of military vehicles and located military equipment; when visiting Rostov-on-Don, he determined that "the bridge across the Don is the best target in the south of Russia", and the like. Grow operated rather crudely: he was caught several times with the goods and, as a result, became the center of an international scandal. One would think that Grow's incident would serve as a warning to the people at the US Embassy in Moscow. But no: as they say, the leopard can't change his spots. Here are only a few of the facts:

1954: Lieutenant Colonel Howard Felchin, the assistant military attache, and Major Walter Mekkinin, the assistant air attache, were expelled from the USSR for collecting military information during trips within the country. They got into trouble by losing their notes and even the original copy of their intelligence assignment.

1955: Assistant military attaches John Benson, Captain William Stroud, and Captain Walter Mule, who were actively engaged in collecting military intelligence information, were declared persona non grata.

1956: Assistant air attaches Hubert Tensey and Captain Charles Stokkel, who repeatedly attempted to penetrate areas where military units are located, airports, and other military targets, as well as the border zone in the area of Brest, were expelled from the USSR.

1957: Assistant military attaches Paul Uffelman and Lieutenant William Lewis, who were arrested in Leningrad while photographing defense enterprises, were declared persona non grata.

1958: Military attache, Colonel Clyde MacBride and seven other employees of the offices of the Military, Air, and Naval attaches were found guilty of the same activity. [redacted]

1959: Embassy attache Russell Lenzhelli, who was caught red-handed during a clandestine meeting with an American spy, was asked to leave the Soviet Union.

1960: Air Attache, Colonel Edmund Kerton, and his assistant, Major Irving MacDonald were expelled from the USSR for repeated attempts to penetrate areas occupied by military and military-industrial targets. When they were arrested, a film containing photographs of military aircraft and defense enterprises was found on them.

And this is what took place in October 1962 in Leningrad. Workers V. A Nikitin and M. A, Nikolayev, the chief of a life-saving station, AI Val'ter, and a diver, L. M. Kravchenko caught a suspicious person in the vicinity of a military target. He was acting strangely -- sometimes talking to himself and then suddenly beginning to play with the lapels of his jacket. The workers summoned the Militia. They told their prisoner

to unbutton his raincoat and jacket, where they found a small black instrument and white cloth pouches skillfully concealed on his chest. The farther they went the more they discovered. The pouches turned out to contain diagrams, charts, maps, lists of notes; the pocket of the coat held binoculars and some sort of small ear phones were attached by tape to the cloth pouch of a microphone, from which fine wires ran to the black instrument.

The prisoner turned out to be the assistant US Naval Attache, Raymond Smith. He carried plans of the ports of Leningrad and Tallin, on which marks had been made, giving the precise locations of moorings, gasoline tanks, repair shops, and enterprises related to port activities. The intelligence officer's portable recording apparatus held a tape with almost two hours of recording on it -- Smith had dictated the results of his observations during a stroll in the area of the military targets. In addition, Smith was found to be carrying a miniature Minox camera, containing an exposed film of an intelligence nature, and high-power binoculars, which permitted him to observe interesting installations from a great distance.

Following Raymond Smith, his namesake Edgar Smith, the Assistant Air Attache, was caught in the beginning of 1964. Together with two employees of the US and British air attache offices, Edmund Evetina and Commander Anthony Davis, he was trying to carry out reconnaisance of military targets in the Tula area.

The unscrupulous use of the diplomatic service by American Intelligence was shown by the scandalous case of Richard Jacob and his colleques, who misused their official positions. A secretary-archivist at the US Embassy in Moscow, Richard Karl Jacob was caught red-handed when he was taking espionage reports, hidden by the traitor Pen'kovskiy, from a secret cache. At the same time, Soviet State Security organs found that other employees of the American Embassy had a part in this case. Extraordinary facts were uncovered: in anticipation of a prearranged call from the spy, Second Secretary of the US Embassy, Ralph Jones, and Attache Hugh Montgomery stood watch for hours at the telephone; at the first signal, the Embassy doctor, assistant Air Attache Alexis Davison rushed to a light pole with the spy's mark; assistant agricultural attache Rodney Karlson maintained personal contact with the spy and received stolen material from him. It seemed that almost all the inhabitants of the Embassy building on Chaykovskiy Street were engaged in a single endevor -- servicing the spy Pen'kovskiy. In league with their husbands, the wives of the diplomats also actively supported secret contacts with the traitor, using children's playgrounds on the boulevards of Moscow and embassy clubs, diplomatic receptions, apartments, and even washrooms for this purpose. And although, in accordance with the rules of diplomatic immunity, none of these people appeared on the docket in court, where Pen'kovskiy and his English partner Grevill Wynn ended up, the world learned how many unusual "diplomats" the CIA used to direct the American Embassy in Moscow.

****

We live in an enormous and very beautiful country, offering any foreigner a tourist route to satisfy the most diverse tasts. We have much of interest to offer admirers of antiquites. A trip through the USSR can afford great pleasure to the art connaisseur and to people who are int rested in nature, hunting, fishing, and touring by car. Of course, this does not exhaust the interests of travellers -- increasing numbers of people from all over the world want to see with their own eyes the first Soviet socialist state in history.

[redacted]

True realization of the Leninist policy of peaceful coexistence has resulted in the appearance of many new phenomena, unknown to us during the personality cult, and among these is foreign tourism in the Soviet Union. Foreign tourism is growing each year; more and more countries are participating and the number of guests who visit us is increasing. The state is showing them greater attention on the theory that the more people who see the Soviet Union with their own eyes and get to know its people, the more difficult it will be for bourgeois propaganda to spread all sorts of cock-and-bull stories about the aggressiveness of the USSR and about its desire to unleash a new World War. Motels and camping sites, hotels and sanatoriums, pensions and museums, theaters and concert halls serve our foreign guests. Tourists are received with traditional Soviet hospitality and we hope their time in the USSR will be well-spent, that they will see and learn much. Most tourists, on their return home, correctly and kindly tell about the Soviet Union and its people, about their cares and hopes. And this helps to strengthen mutual understanding and trust among peoples, to convince people that peaceful coexistence is not a "tactical move" and not a "Communist propaganda trick", but a natural objective process in the development of international relations in the modern world.

Is this not why tourism has become a target of attack for those who are opposed to peaceful coexistence? Imperialist intelligence takes a two-sided position with regard to foreign tourism in the USSR: on one hand, they try to use it as a loop-hole to carry out intelligence activity and, on the other, they try to discredit the idea of tourism itself. Exploiting cases when their agents and intelligence officers have been caught in our country, they hope to frighten honest people out of their desire to visit the Soviet Union and to get to know the life of its people. Placing agents among the tourists, American intelligence would like to provoke Soviet authorities into changing their position with regard to foreign guests, into the establishment of barriers against this human influx which unites countries with different systems.

But, no matter how ingenious the approaches taken by the CIA leaders, they cannot force us to go to extremes. We have, once and for all, freed ourselves from the suspicion which poisoned our lives in former times. This does not mean, however, that, when doing away with the vestiges of the personality cult and the situation of manifold distrust which went along with it, a narrow-minded complacency and caring about have taken its place. To the contrary, the 20th and 22nd Congresses of the CPSU and the new Party Program have taught us to tell our real friends from our enemies. The whole world knows that the great strength of the Soviet state, its scientific and technical advances, its prowess in such great accomplishments, say, as space research, give our imperialist enemies no peace. In the political, economic, and strategic fields, imperialist circles are extremely interested in penetrating our many secrets. Let us recall that Allen Dulles was thinking specifically about tourism when, during an address at a dinner of the Aeronautical Institute in New York, said as early as January 1960 that "at the present time, the outside world can obtain more information inside the Soviet Union than in the past. This is particularly true of information concerning the development of the Soviet economy....". How this is actually accomplished can be easily seen in cases when State Security organs have uncovered American spies visiting the USSR with tourist visas and trying to lose themselves in the mass of people who sincerely want to become acquainted with our country, with its expanses, its beauties, and its peoples.

[redacted]

In this influx, however, there appeared a shabby Renault automobile, driven by a 30-year old ship's machinist from Amsterdam, Ebert Reydon, and carrying Lou de Yakher, a 25-year old merchant marine navigator, as a passenger. Tourists are tourists and their itinerary was generally typical of all automobile tourists: Uzhgorod - Kiev - Khar'kov - Zaporozh'ye - Yalta - Odessa - Kiev - L'vov - Uzhgorod. If you take this route, you can see the beauty of Kiev rising from the ashes, green Khar'kov, the gigantic Dneproges, the unforgetable nature of the Crimea with its remarkable resort cities, and ancient L'vov. Sitting around a camp fire at a camping site in the evening, you can spend many hours in pleasant and interesting conversation. And there's much to photograph -- in the cities, the steppes, forests, and coastal regions.

All this is possible .... But Reydon and de Yakher were least of all interested in antiquities and landscapes. They were not attracted by hearty get-togethers around campfires and by the opportunity of getting to know the "Russian miracle", about which there are now so many rumors not only in their native Amsterdam, but in ports near and far which they have visited. Too often, Reydon and de Yakher tried to deviate from their itinerary, too evident was their desire to get into places where Soviet citizens do not wish to allow indiscreet, foreign eyes. The passengers of the shabby Renault had a reason for such behavior. Their return was awaited n t by the relatives and friends who usually fling themselves greedily on friends returning from distant lands. American Intelligence residents, who had outfitted them for their espionage voyage, waited for the seamen. Long before their trip to the USSR, Reydon and de Yakher completed so-called "training" trips. Here is what Ebert Reydon had to say about them during the investigation following his arrest:

"We also drove to the port of Rotterdam. The purpose was to practice photography from a moving car and also to give a detailed description of an American destroyer at anchor in the port. De Yakher and I", continued Reydon, "studied albums of photographs showing various military targets: rocket and radar installations, various types of tanks, jet planes, special vehicles for hauling rocket equipment. They showed what a rocket base, an airport, a tank storage field should look like. I recall that most of the photographs came from military and air parades in Moscow."

The American intelligence officers outfitted the "tourists" with unusual care and, it must be said, with considerable foresight: four cameras, dozens of color and black-and-white- films, a supply of telescopic lenses for long-range photography, compasses, powerful binoculars, portable transistor radio receivers, and many other things which might be useful in carrying out their espionage mission. And their mission was very specific --- "We were to try", said de Yakher after his arrest, "to reconnoiter an airport and automobile plant in the region of Dnepropetrovsk and Zaporozh'ye and, for this purpose, they showed us maps drawn on tracing paper, of the supposed locations of these targets. We were given similar assignments with regard to Umani and Belaya Tserkva...In the region of one village, the name of which I can't recall without checking my notes, we were to find and photograph an enterprise which was supposed to produce rocket fuel...In the area of Uzhgorod-L'vov, they ordered us to locate, describe, and photograph railroad lines, trains passing through and being formed there, bridges, radar installations, high-voltage transmission lines, and also branch automobile roads leaving the main route...." And so on and so forth.... The spies familiarized themselves with photocories of the Crimean coast, with a chart of the port of Odessa, and were even advised to go to a picture gallery, from which they could most safely secretly photograph the installations at this port.

[redacted]

In actuality, fulfillment of this mission was not so simple as were the "training trips". In one instance a militiaman returned Reydon and de Yakher to the road when they tried to turn off to a point, shall we say, "not listed in the tourist guide". Another time, employees of "Inturist" explained that there is no easy access road to the village with the name "which is difficult to remember". On the third, fourth, and fifth tries, they simply told them that "foreign tourists are not allowed". Nevertheless, the uninvited guests were able to compile espionage notes which were far from unimportant to our security. A customs check at Uzhgorod turned up a diary in the possession of de Yakher. He had jotted down colorful notes such as "___km - radar tower to the left, __km - viaduct, __km - airport on the right, __km - convoy of military vehicles, __km - turn to the right to a forbidden zone".

The search of these two tourists was a rather unpleasant process for our customsmen. It doesn't enter their heads to search the thousands of honest and well-meaning foreigners who pass daily through control points on the Soviet border. But Reydon and de Yakher were so nervous at the customs house, behaved so suspiciously, that they attracted attention. There's no point in saying that there's no smoke without fire .....

We'll skip the details of the espionage epopee of Reydon and de Yakher, which are, perhaps, not without interest -- how they fell in the laps of American Intelligence, how, in particular, the "tender-hearted Yankees" came to chose carefree seamen, how they convinced them that an espionage voyage to the Soviet Union would be little more than a recreational trip, similar to one that Reydon had taken previously in Shanghai. In this article, we are interested in something else: American intelligence persistently tries to use every possibility for espionage against the USSR.

In the western countries, there are many people who passionately hate our country. One of these is Adolf Werner, who once headed a department in the store of the Schneider firm in Karlsruhl. He joined the National Socialist Party as early as 1940 and remained in it until 1945, until the moment when the Americans captured him. Up to this time, Werner served for a fairly long period of time in a "Death's Head' infantry brigade of the SS, fought against our country, received first and second degree Iron Crosses, and, when the Soviet Army smashed Hitler's military machine, barely had time to escape to the west. During the postwar years, he turned to journalism and, from time to time, published travel notes in the West German press about trips in various countries, mostly, in the capitalist world.

The Americans didn't lose sight of Werner. Convinced that his Nazi past was sufficiently forgotten and his name as a journalist firmly established, they suggested that he make a tourist trip (with the Americans paying the bill, of course) to the USSR for the purpose of writing "travel notes". This is how it was at first only, however. Later, as Werner admitted during the investigation, the representative of American Intelligence, Johnson (really Bauer) didn't hide the fact that he expected Werner to provide information of a military-intelligence nature. In particular, Johnson-Bauer insisted that Werner "travel slowly through the USSR, be observant and attempt to locate and describe military targets, airports, military units, radio stations, radar installations, movement of troops, and also bridges and other structures". However, according to Johnson and other American intelligence officers, who prepared Werner for this trip, this "can be done easily and would involve no danger". Nevertheless, they provided the spy with a special ball-point pen before his departure and explained how it is used. "During instruction", said Werner later"I wrote several secret writing notes for practice. And when they developed them for me, I saw the words I had written". To ensure that Werner's trip would go without serious incidents, the Americans gave him a special address: "Sweden, Sanatorium Agra, Titsina, Elke Khannelora Detmers", to which he was to write every week and send hypothetical post cards from "Adi".

[redacted]

In his own Volkswagon, Werner and his wife, Hermina, set out across Austria, Hungary, and Rumania to the Soviet Union. Soon, in the region of the highway from Kiev to Kharkhv, Werner was arrested while taking photographs of military equipment. An examination of their baggage found an espionage diary. Between the lines of ordinary text were hidden notes written with the pen described above. "In .....part of the city a radio tower" "In .....a radar installation". "In...saw soldiers of the air force". "At kilometer number ....another radar installation." "Trucks numbers .....carrying troops with black arm patches".

Nothing could help Werner and his wife: not their intelligence instructions, nor their ball-point pen for secret writing, nor the address in Sweden. Having been found in the act of espionage, they were sent to court and tried.

Life shows that American intelligence officers experienced in hostile actions against the Soviet Union "have forgotten nothing, but have learned nothing.

[redacted]

Speaking about the CIA building in Langley, we should mention one item which is of great importance for the entire system of American espionage. The authors of the book The Invisible Government write about this as follows: "Among the special structures is a scientific laboratory the construction and equipping of which cost 200,000 dollars. Here the CIA is perfecting some of its miniaturized types of weapons and is developing invisible inks, special explosives, and other devices. One of the really astonishing instruments at Langley is the electronic brain, which stores and issues mountains of information which arrives at headquarters.... This brain is called 'Walnut' and was developed especially for the CIA by IBM. A necessary document is planned before the observer with the help of the photo-tape operation of the 'Intellofax.' The 'Walnut' and the 'Intellofax,' unlike man, operate without error."

These so-called silent services constitute technical means of intelligence. The development of such means leans on the entire technical might of the US, as well as on the principle of sparing no dollars!

First among the chief means of technical intelligence, undoubtedly, is aerial intelligence. Immediately after World War II, special aerial units of the CIA began systematic flights along the Soviet border, and they later tried to penetrate Soviet air space. In May 1960, the magazine Electronics gave interesting data in this regard: Since April 1950, the US had attempted 81 times to penetrate the air space and territorial waters of the Soviet Union. The magazine noted with unconcealed regret that in all cases the violators were met by the defenders of the Soviet borders and that 20 of the aircraft-violators did not return to their bases.

In 1954, a special extensive program of aerial photography of Soviet territory began which involved the use of high-altitude drifting balloons and spy planes. The first attempts to penetrate for intelligence purposes the air space of the USSR and the countries of the socialist camp with the use of the balloons were undertaken in 1956. But despite the expenditure of vast funds, the calculation on the balloons was not justified. The air defense covered the Soviet sky well. Then the stress switched to the use of strategic aircraft: jet aircraft which were modifications of the B-47 bomber, as well as reconnaissance variations of the B-52 and B-58 bombers. The Americans created two types of high-altitude aircraft, the Lockheed U-2 and the Martin RB-57D, specially for reconnaissance flights.

The Soviet people know from the materials of the trial of the pilot-spy Gary Powers, who was shot down over Sverdlovsk on 1 May 1960, how well ~~planned~~ the "sky espionage" was. The intelligence services spared no efforts to obtain photographs of Soviet military objectives. The CIA heads were supported in this matter by the heads of American

[redacted]

[redacted]

diplomacy. Christian Herter, US Secretary of State at that time, reported to the Senate not without reason that "the benefit derived from aerial reconnaissance justifies the risk involved." It should be considered that the technical equipment of the "sky spies" permits them to obtain photographs from high altitudes. Life thus described the capabilities of the apparatus on the notorious U-2: The parking place of motor vehicles is empty when the camera shutter clicks. However, the developed negative clearly shows the tracks of the motor vehicles which were there before the photograph was taken. A person reading a newspaper in his garden is not visible to the pilot flying at an altitude of 40,000 feet. But the camera in the aircraft takes a picture in which one can read the headlines of the newspaper in the person's hands."

The CIA is not satisfied with this and continues to perfect the means of "sky espionage." At Edwards Base (in California), tests were held in 1964 the purpose of which, as the Associated Press reported, was to "take high-quality spy photographs during flight at a speed of 2,000 miles per hour."

Following the aircraft reconnaissance ran the cosmic reconnaissance which was begun in recent years. The CIA, with the help of the American Air Force, is developing reconnaissance satellites (by 1962 the US had launched more than 100 satellites of various types, including 40 of military significance). The plans for such satellites were given various names: Big Brother, Sentry, etc. In 1959, the Sentry plan was divided into two programs: Midas -- satellites for the long-range detection of ICBM launches; and Samos -- spy satellites for the reconnaissance of ground targets (aircraft bases, ICBM bases, industrial objectives, the sea fleet, etc.). A special aerial photo apparatus either automatically or on command from the ground photographs ground objectives from an orbit 220 km in height, distinguishing objects one meter in length. For a 15-year program from 1960 to 1975 it was planned to launch 117 such spy satellites (49 in 1960-1964, 38 in 1965-1970, and 30 in the following 5 years).

Another type of technical equipment used by the CIA is radio intelligence, or the system of "long-range ears." It consists of a network of radio-monitoring posts along the border of the Soviet Union, East Germany, Czechoslovakia, Hungary, and other socialist countries. They are engaged in radio intercept, paying special attention to communications among units of the Soviet Army in order to disclose the location and chief tactical and technical data of Soviet radar stations, guided-missile direction systems, radio-navigation systems, antiaircraft defense facilities, etc. Radio intelligence is conducted both from the ground and from aircraft of the U-2, RB-57D, RB-47, RB-52, and RB-58 types which make regular flights along the Soviet borders.

[redacted]

[redacted]

The central point of important technical facilities is the NSA, the most hush-hush American intelligence service. But, as is known, a secret sooner or later becomes known. William Martin and Vernon Mitchell, employees of this agency who recently rejected their American citizenship and asked the Soviet Union for political asylum, said that the NSA is studying top secrets of each state -- the ciphers and codes for secret communication. More than 10,000 employees of the agency occupy a building the size of which is smaller only than the Pentagon. Equipped with modern machinery and instruments, including large electronic computers, and using more than 2,000 intercept posts, they record all the coded reports and reports sent in open text of almost all the countries of the world, including Turkey, Italy, France, Indonesia, the United Arab Republic, Uruguay, Yugoslavia, and others.

"In September 1958," Martin and Mitchell reported at a Moscow press conference, "an American C-130 crossed the Soviet border from Turkey and trespassed into Soviet Armenia. This aircraft did not return. The US government, as usual in such cases, reported in a 'cover' story that the aircraft had allegedly been gathering scientific data and had violated the Soviet border by accident. The US maintained that the C-130 had been shot down over the territory of the Soviet Union for no good reason. In the second half of the day, at Gen John Sanford, the director of NSA, in speaking on the internal radio broadcasting network of the agency, demanded that the employees refrain from discussion of any questions regarding the flight of the C-130." Moreover, a highly-placed employee of the agency told Martin that on board the C-130 were electronics specialists and equipment for intercepting the signals of Soviet radar stations.

The American intelligence services are literally doing everything to learn Soviet military-technical secrets. Here is one such example.

"The Russian commercial liner Aeroflot had just landed and the workers of the Vienna airport boarded the plane to clean it up before the return flight," says E. Tully in his book. "While the aircraft was being readied, a man in a dark suit approached the man who collected the sweepings and unnoticeably gave him money. After this, the collector gathered the sweepings from the Soviet aircraft, put them in a hand cart, and guided it to his room. Suddenly this man appeared there and claimed the box containing the sweepings from the Soviet aircraft. He put the box in the back seat of the car and went home. Behind a closed door he carefully examined them: torn magazines, paper napkins, empty bottles, bread crusts, broken plates, and a bent clothes hanger. Several days later, the hanger was delivered to one of the large offices at CIA headquarters in Washington. The person who signed the receipt for obtaining the hanger was delighted. For many months they (American intelligence services - F. S.) had worked to gather information on a new Soviet long-

[redacted]

range bomber. They had gathered much information on the aircraft but were unable to learn anything about its range and bomb load. However, they knew that the shavings which remained after mechanical processing of the wing were remelted and used to manufacture a special type of clothes hanger. Finally they had such a hanger. With the help of spectro and chemical analysis, the experts were able to learn what type of metal alloy was used to manufacture the hanger. With this formula at their disposal, the CIA determined from what the bomber wing was made, and little was needed after this to calculate the range and bomb load of the aircraft."

The American intelligence services could flatter themselves with the success of this experience. However, to the chagrin of its agents, the hanger had not been made from the shavings obtained in processing the bomber wing. Nevertheless, it is important to note the scrupulousness with which the American intelligence services gather information which interests them, as well as the many hopes which they entrust with their "silent services," which the vast American monopolies give to the CIA.

Somewhere in the CIA archives is a photograph of the spy Ivan'kovskiy which is not needed now by anybody. A similar photograph is gathering dust in the safes of British intelligence. Both photographs were taken on the same day and hour, at the same place, by the same photographer, and, evidently, on the same film. The difference consists only in the fact that in one frame the spy was photographed in the uniform of an American army colonel, and in the other, in the uniform of a British colonel. One can imagine a pathetic picture of recruitment: Two full-dress uniforms were laid out before the spy as if promising him dual protection. Posing before the lens, the traitor dressed in the uniform of one, then the other, state, calculating on which horse it is more profitable to mount. Of course, each side in this unusual spectacle, which occurred in London at a secret abode of British intelligence, secretly felt that the main catch would fall to them. But the recruiting agents were pursuing a, so to speak, higher political goal: This masquerade, in the conception of its organizers, symbolically personified a new stage in the development of an American-British intelligence alliance.

In 1947, Allen Dulles wrote in a memorandum in honor of the future American intelligence services that the newly created intelligence organization, the CIA, must become a "universally recognized organ which maintains ties with the central intelligence services of other countries." Sixteen years later the same Dulles, who has already been dismissed from leadership of the intelligence services, noted in summing up the results of what has been done that "one of the most gratifying features of our intelligence activities recently is the increasing cooperation between the American intelligence services and their

[redacted]

corresponding organizations in all countries of the free world which are united with us...."

Of course, the ex-chief of American intelligence has in mind the union under the flag of NATO, SEATO, and other blocs of forces which are operating against the socialist camp. The Atlantic union of intelligence services exists just as does the Atlantic military-political bloc of governments and general staffs. And just as the US is the leader in the bloc of governments and staffs, the CIA, which is expending every effort not to let the reins out of its hands, plays the main role in the intelligence alliance.

Since the very beginning of its existence, the CIA has tried to take in hand the intelligence services of England, West Germany, France, Belgium, Holland, and Canada in order to use their resources in the interests of implementing their own strategic plans. Ties with the CIA are quite extensive. In the staff of the high command of the NATO armed forces in Europe there is a Special Intelligence Administration. Under the central organ of the Atlantic strategy there is a "Permanent Group of the Military Committee of NATO," and in Washington there is a "European Coordinating Committee" for exchanging intelligence. Dominating the coordinating administration which directs underground activities against the countries of the Warsaw Pact are the CIA and the Intelligence Department of the US Department of Defense. Intelligence services also exist in the command staffs at "theatres of military activities" of NATO -- North Europe (Norway, Denmark), Central Europe (West Germany, France, Belgium, Holland, Luxemburg, England), South Europe (Italy, Greece, Turkey), and the Mediterranean command (the Mediterranean Sea and the straits).

In 1949, American intelligence services acquired the right to assign their representatives to intelligence organs of NATO countries. Moreover, the US has bilateral intelligence agreements with the governments of a number of states. In 1957, combined commissions of representatives of American and British intelligence services, which had existed during the war, were restored. A joint intelligence center is operating in London, the so-called "Joint Intelligence Bureau," of three countries -- the US, England, and Canada. There is also a "Japanese-American Committee on Security Matters." When there is no agreement on cooperation, the CIA practices an "exchange of information." Such are the varied forms of control of the CIA over the intelligence services of the countries which belong to the main imperialist blocs -- NATO, SEATO, SENTO, and the OAS. Actively used for intelligence interests, of course, are various types of international subversive organizations supported by American intelligence services, such as the "Committee of Free Europe," the "Anti-Communist League of Asian Peoples," the "Inter-American Conference for the Protection of the Continent," etc.

[redacted]

[redacted]

A special place in this total offensive of American intelligence services has been occupied and continues to be occupied by the long, complex, and highly contradictory relations with the intelligence services of West Germany. It is well known that in West Germany immediatly after the war, the Americans secured for themselves the intelligence organization of General Reinhardt Gehlen. This name again appeared recently on the pages of the Western press in connection with the "sensational change" in the leadership of the German espionage organs. In order to judge what is being concealed behind this fuss, we will look into some facts.

Gehlen is one of the ominous products of the brown Reich, a person who always presents, and most probably is presented, in a halo of mystery. In the 10 years after the war, the Western press did everything to create more of a haze around this personality and to make him, and at the same time the West-German intelligence services restored by him, a dark and also a romantic glory which arouses interest, admiration, and fear in the man in the street with a weakness for sensation. Utilized here are falsifications of his biography and the dissemination of stunning legends about noble origin, about the former "general from espionage," about the fantastic present life of the "man behind the scene", the "doctor," "Number 30," "Schneider," the "man without a face," and God knows what else.

However, Gehlen's past differs little from the past of many reared under German militarism. The dizzy career of the chief of modern German espionage was preceded by an ordinary officer's biography. He was born in 1902 in the family of an ober-lieutenant in the Kaiser's army, he was too young to appear in World War I, he trained in the Reichswehr, and he became an officer and an adjutant. He served for one year as adjutant of the first deputy chief of the general staff of the ground forces and later continued his service in operations headquarters under General von Manstein. In 1940, Captain Gehlen was communications officer between Army Commander-in-Chief von Brauchitsch and Bush, commander of the 4th Army, and the tank groups of von Goth and Guderian. Adjutant and staff duty brought Gehlen no military glory, but instead it expanded his ties in the higher circles of the Wehrmacht and determined his future career. Judging by everything, Captain, then Major, then, during the offensive against the Soviet Union, Lieutenant Colonel, Gehlen was that intermediate figure who organized both the military caste and the Nazi-Gestapo environment. As a true national-socialist and not an outsider from the SS which stuck to the military uniform, but a regular soldier by heredity, he was on good terms with both the generals and the Reichsfuehrer clique. From Brauchitsch he transfered to adjutant to General Halder, and from Halder, to the operations headquarters of the general staff, where Heusinger appointed him leader of the "East" group.

In the spring of 1942, Colonel Gehlen held the post of chief of the

[redacted]

department of "Foreign Armies of the East" in the general staff of the ground forces. The new leader of front line intelligence made no attempt to undermine Admiral Canaris, chief of the Abwehr, although in his position he could be considered his colleague and not his subordinate. The senior and junior colleagues shared spheres of influence whereby Gehlen used in every way possible the experience, ties, and advice of the admiral. Thus, at the advice of Canaris, he engaged not only in the traditional collection of information in the sphere of the interests of the armies to which he was attached, but also in thorough secret-service activities in the East, the organization of sabotage and underground propaganda against the Soviet Union, and also intra-army counterintelligence and police tracking of the personnel of the German staffs and units. Thus, the ordinary army intelligence department under Gehlen's leadership became a powerful, essentially independent intelligence-sabotage anti-Soviet organization supported by its own police service. Gehlen was flexible. With all his ambition, he did not ignore or avoid any of his superiors. He cooperated with both Canaris and Himmler, and thereby operated his strengthening secret service well through all the troubles of internal dissentions. Hitler and Himmler valued the activities of his secret service, which was free of legal and moral norms and which ruled in occupied territories without mercy even for its own regular intelligence officers, less for the military prisoners and civilian population. As is asserted in the biography of Gehlen, who was called by Himmler's men the "Grey Hand," it was his spy service which carried out the entire operation with the traitor Vlasov and his people. It is not surprising that Gehlen, resourceful and gifted not only in espionage but also in maneuvering on the higher level, was able on the complete defeat of Fascist Germany to retain in his control the nucleus of the secret police, its connections, and, apparently, the main documents. He was a "prisoner" not as a war criminal who deserved the rope long ago but as one who enjoys luck and the waiting mercy of the victors, in the role of a potential collaborator whose services the victors undoubtedly needed. Gehlen had considered beforehand the trend of the post-war policy of American imperialism in relation to its military allies. All the secret advances of the American intelligence services toward Canaris, Himmler, and the "general opposition" were well known to him, but he did not get mixed up in such dangerous contacts before it was time. When the time came, he brought to American-British reaction a ready-made organization which depend on him completely and was ineffective without him. This permitted him to escape the noose. After gathering the archives of his department, Gehlen surrendered to the American authorities and asked to be put in touch with the heads of the intelligence services.

Tully states that "in Washington the government understood well that an extremely important military prisoner had fallen into the hands of the Americans. Gehlen was immediately put to work. He worked for 18 months to systematize his materials on the Soviet Union and to compile indexes and

[redacted]

master indexes in the English language for their use by American intelligence. He was then given the task of creating a small army of secret agents. He was allocated several million dollars and was asked to head espionage in the Soviet zone for the benefit of the US."

A new, extensive spy organization sprang up under Gehlen's leadership. Its staff was located in Pullach, near Munich, and for several years the spy network served as the chief weapon of American intelligence in subversive activities against the Soviet occupation troops in Germany and against the young German Democratic Republic.

In the history of the secret war there have been previous instances of cooperation of intelligence services of two or several countries (for example the US-England and Germany-Italy-Japan). But not once did it reach the point where the intelligence organization of one state (in this case the Hitlerite state) on the whole, with all its live and dead inventory, transfer to the services of another country (the US). The creation of this unprecedented "symbiosis," as we saw it, was not unnatural. To say nothing of the sympathy of long duration of American intelligence heads for the experience of the German intelligence services, the union of Reinhardt Gehlen and Allen Dulles after World War II met the urgent interests of the most reactionary monopolist circles of the US and West Germany. In all this they had their own, imperialist logic: Because the American imperialists had taken a course toward the "anticommunist crusade," they simply needed the help of the former services of Hitlerites, their black experience, their practices, and methods. Such figures in Nazi intelligence as Gehlen understood perfectly that it was the American militarists who restored and retained their apparatus. Allow humiliation, service, toadying work under any colonels and generals from across the ocean, but to make up for it there is the perspective of changing in the future from servants to "junior partners," then to the rule of equal partners, and later, simply independent colleagues in the near future. In brief, the end justified the means, Gehlen played a large game with a long-range goal. Everything that he did, going first from lackey to "junior partner" of Allen Dulles, repeated in miniature the game of Adenauer. He also for a short time was simply a servant of the US but later gathered the strength and became an independent figure in military and political relations.

Gehlen operated with the cunning and insidious modesty characteristic of him. From June 1945 to early 1950, his organization existed on funds of the US military intelligence, and then the CIA began to subsidize it. The exact amounts of American funds spent by Gehlen are not known, but competent people have evaluated them at 20 million marks (5 million dollars per year). The correctness of this evaluation can be judged by comparing it with the 1956 budget, when Gehlen's service was transfered to West Germany and received 23.1 million marks per year, or a little less than

[redacted]

[redacted]

6 million dollars. Let us remember that the intelligence service of Canaris spent 31 million marks in 1943, or 11.7 million dollars. After 1956, Gehlen's budget began to grow fast, and in 1963 it reached 58.1 million marks (more than 14 million dollars). The Bonn intelligence machinery now receives more funds than Hitler spent for the intelligence services of Canaris at the height of World War II.

Thus, Gehlen and his revanchist inspirers deftly twisted their overseas patrons around their little fingers, using their patronage and millions of dollars to retain and restore the Hitlerite military intelligence services, already more powerful and under a new, modern mask. The West-German government did not need any additional forces when it decided to legalize Gehlen's organization and change it officially to the "Federal Intelligence Service" (BND). This is also unprecedented. Those who nursed Fascism, evidently, for good reason are celebrating the victory in such a long game with American intelligence, the nature of relations with which is now determined not by Washington but by Bonn. The memory of the mask with which Gehlen escaped with the help of the Americans can be retained eternally by him and his descendants. But the cause is first and foremost. There is no junior partner. There is an intelligence system whose activities must be seen with apprehension by Allen Dulles and his successor, John McCone.

Of course, both intelligence services remain partners in anti-Soviet matters. But the "Federal Intelligence Service" is a successor of the Abwehr just as is the Bonn state -- a continuer of the expansionist schemes of the Third Reich. Today the point is turned toward the East, tomorrow it can be turned toward the West. This has happened in the past. That is why contradictions are evidently rending the heads of American intelligence. Who is better, a new head of West-German intelligence or the old chief, who is crafty but who owes his life to his protectors? The US now supports the old chief. When voices were raised in 1963-1964 concerning the necessity of "removing Gehlen," the Americans insisted that he remain in his post.

Such are the relations now within the intelligence alliance in the Atlantic association. The law of the jungle is now operating here more strongly than in any other field of political life of the Western world. Years pass and mankind will learn the truth about the "inter-family life" of what one would think are very solid imperialist alliances. How monolithic the Berlin-Rome-Tokyo Axis appeared, how many joint bloody actions were undertaken by this Axis against the cause of peace and against all mankind, how enthusiastically and unanimously Admiral Canaris and General Ritter cooperated in organizing the putsch of Franco against the republican government in Spain! But in Czechoslovakia, from the time of the now famous Black Lakes, supersecret archives of the Hitlerite intelligence services were recovered and the entire world learned that the so-called Axis was not so solid. It turns out that

[redacted]

[redacted]

Canaris and Himmler conducted intelligence operations not only against their military enemies but also against their loyal accomplices. It is learned that the Gestapo had to follow not only the participants of the opposition and the partisans, but even Count Ciano, Minister of Foreign Affairs of Fascist Italy, and later Mussolini himself! Is there any reason to suggest that these same laws of the jungle do not also exist in the present alliance of the imperialist world? Of course they exist, and we do not have to wait long for exposure of the present discord and contradictions. They are being revealed each day, and there is no need to sink to the bottom of new Black Lakes for the facts which characterize the mutual discords in the camp of the partners. The Western press from time to time generously presents them, sometimes in pursuit of sensation and sometimes for other secret reasons the analysis of which there is no sense in spending time.

We have spoken above about the disclosures made by the two workers of NSA, Mitchell and Martin, in 1960. They revealed to the world certain secrets of the intelligence activities of the US government. Among these secrets is espionage against their own allies. Here are certain excerpts from statements by Mitchell and Martin: "From our work experience at NSA, we know that the US is successfully reading the secret correspondence of more than 40 countries including its allies.... The NSA has a "Hello" department which studies the codes and ciphering system of the US allies and neutral countries.... The American government has gone so far that it has begun to recruit agents from among those who serve its allies.... The US government gave money to a cipher clerk working in Washington in the embassy of one of the allied countries for information which helped to decipher coded telegrams of this ally."

This was confirmed in a statement by former NSA employee V. Hamilton, who stated that he worked in the "Hello" department and that "this department is engaged in deciphering correspondence of countries of the Middle East, including Iran, Turkey, Egypt, Libya, Morocco, Ethiopia, the Sudan, and Greece. All their correspondence is intercepted by a branch of NSA in Cyprus. Intercept stations are also located in Beirut and on Crete. All the intercepted telegrams are sent by radio through Tangier to the US, where we deciphered and translated them." Hamilton said that "all conversations between military units of Jordan, Iraq, and Turkey were intercepted by NSA regardless of the text -- clear or coded." Hamilton also maintained that NSA is working to reveal the codes of other allies of the US.

In 1961 on the pages of four newspapers -- the French Combat, English Daily Herald, Turkish Cumhuriyet, and Italian Giustizia -- there appeared letters which were similar in content by an anonymous employee of American intelligence services. The author of the letters also reported instances of espionage by the US against their own allies.

[redacted]

[redacted]

In particular, he sent to the four editorial boards photographic copies of a bulletin of American intelligence of 13 July 1959 which contained intelligence data on British troops in the Middle East. Similar information on the armed forces of West Germany was reported in a document of 22 January 1960.

"The US," stated the respectable Dutch newspaper De Telegref on 9 March 1964, "is conducting espionage not only against the communist and enemy countries. It is also conducting espionage against its NATO allies." The newspaper quoted from a book by Sancho de Cramon entitled The Secret War and published in 1963. The author presented examples of US intelligence activities against Holland.

If these are the facts which characterize the attitude of American intelligence toward states which are allies of the US, what is its attitude toward capitalist countries which do not belong to NATO? Much is known about CIA activities against the legal government of India, Ceylon, Cyprus, Burma, Brazil, Cambodia, and other states. In other words, the doctrine of "total espionage" has been adopted by American intelligence officials [illegible] and his accomplices with all its attributes. As Allen Dulles stated many times in demanding that his subordinates gather information "about all countries," life is such that it is necessary to conduct "espionage all against all." Old history is being repeated in a new way.

There is a concord of Western intelligence services, of course, but the contradictions among them, just as among their governments, are not ceasing. In the present situation of hegemony of American imperialism, the main line of these contradictions passes between the CIA and all the other bourgeois intelligence services, especially between the CIA and the BND.

Quite recently, on 29 August 1964, the French journalist George Anderson published in Combat an article under the expressive title "The German Secret Service Turns Away From Washington." Anderson wrote that "the rivalry between Paris and Washington in the struggle to create with Bonn a political, diplomatic, and strategic axis has entered a new phase and threatens to spread to one difficult sector which can ensure final victory. We are not speaking about Adenauer's note or his telephone talks or about the Munich plot against Erhard-Schroeder, but about the reform and new leadership of the German espionage organs.... Little by little the BND organization (Federal Intelligence Services), headed by Gehlen, has absorbed the MAD organization (counter intelligence) which is responsible for military security and for protecting the Bundeswehr, and it has severely limited the rights of the Federal Organization for Protecting the Constitution. Until now, only the BND was subordinate to the chancellor through the mediation of his state secretary, which was Globke. Recently, without any of the publicity characteristic for such

[redacted]

[redacted]

operations, which are connected with the Abwehr (intelligence), the Bonn Council of Ministers made organizational changes. Henceforth the BND will not be subordinate to the office of the federal chancellor but will be under Heinrich Krone, "who is responsible in the government for complex planning and for the coordination of national defense." Everybody knows that Krone is one of the closest friends of Adenauer, whom he would prefer to have as his successor.... Even after the federal government took this organization under its control, the former Abwehr, known as a very efficient organization in the field of exploring the ground and gathering information in East Europe, constantly supplied valuable information to its colleagues in London and Washington. These two capitals fear that henceforth the invisible army of General Gehlen will turn its back to them and engage in activities detrimental to them -- working for the cause and axis dear to the heart of Adenauer, Strauss, and their friends."

There is nothing surprising about this, of course. It makes no no difference whether Gehlen or Krone heads West-German espionage. This cannot even be considered as the first sign of a departure from subordination of the revanchist organization nurtured by the Americans. You must reap what you have sown. The discords with the West-German militarists constitute merely a very vivid manifestation of the present state of the effect of all those wolf laws within the wolf's dump. Precisely that which was stated in the Party Program occurs with strict regularity: "The main contradiction of the present world -- the contradiction between socialism and capitalism -- does not relieve the deep contradictions which are tearing apart the capitalist world."

Although the crushing defeat of Goldwater shows that the American voter favors peaceful coexistence and opposes war, we cannot but consider the fact that Goldwaterism represents a real danger and that it signifies an intensification of Fascist tendencies in right-wing circles of the US. The process of becoming more conservative, of course, cannot but involve the most reactionary formation of the governmental apparatus -- American intelligence services -- and the intelligence services above all are close to very extreme anti-Communism. This is their food, their fuel, their motive power.

We have covered the brief history of the creation, formation, and endless reorganizations of the contemporary system of American total espionage. In all the fuss and shock which befall this system, it would be naive to see only attempts to improve organizational form and methods. These shocks are necessary, they are dictated by the facts of life, independent of Dulles or McCone. The series of failures, miscalculations, and scandalous exposures are the result of the fact that any total expansion, including total espionage, is resisted by the mighty wall of the socialist camp which endures each and every assault. It is invincible, no matter how much dirt, poison, or bile is thrown on it by

[redacted]

[redacted]

the numerous "theoreticians" and apologists of American imperialism. Hundreds of books are sent overseas which attempt to clarify or deny a particular failure in the activities of the CIA and other organs of American intelligence. But all the authors of these "works" agree on one thing: The socialist camp by its nature is such that no means and methods of sabotage and espionage in the struggle against the bourgeois states has a great and lasting effect on it. One cannot argue with this. Hitler and his spies came to a bad end as will their successors.

There is no force in the world capable of changing the tide of history. Many who sought to turn back the wheel of history have been dumped. A similar fate is in store for the successors of the Hess doctrine of "total espionage" from Langley. Against them stand the logic of history and the tireless revolutionary vigilance of the Soviet people and of all progressive mankind.

[redacted] 1.3(a)(4)

MEMORANDUM FOR THE RECORD:

SUBJECT: Briefing of [redacted] to Load Drop for [redacted] 1.3(a)(4)

1. On 13 and 14 April, the undersigned together with [redacted] met with [redacted] in Helsinki for the purpose of instructing [redacted] to load a drop for [redacted] [redacted] was referred to only as "an important internal asset working for the West.") 1.3(a)(4)

2. The meeting and briefing was held at a Station safe-apartment located at [redacted] and registered in the name of [redacted] (See Memo for the Record of 1 May, filed [redacted]/Operations, regarding security factors bearing upon the conduct of operational activity.) The briefings were conducted in the living room of the safe-apartment. The room consisted of three outside walls while the fourth abutted the apartment bedroom. During the course of all meetings, two radios were used--one against an outside wall and the other against the bedroom wall--each tuned to a different station. 1.3(a)(4)

3. After ascertaining that [redacted] would be willing to cooperate in the loading of a drop for an internal agent, the undersigned briefed [redacted] on the specifics of his projected role in the operation along the following lines: 1.3(a)(4)

a. During the month of June or July, [redacted] would receive a call from an English-speaking, Western visitor, using the name of John. ([redacted] has several Moscow acquaintances by this name.) The call would be made on a Tuesday or Wednesday from an outside phone to [redacted] at his residence [redacted] * at precisely 0900 hours, a time chosen by [redacted] 1.3(a)(4)

[redacted]

[redacted] 1.3(a)(4)

APPROVED FOR RELEASE
31 MAR 1992

[redacted]

as the best suited for him. Rather than tie up [redacted] mobility during the months of June and July, it was agreed that he would await the call during the week of 13-17 June and during the weeks of 4-8 July and 25-29 July. If the call is not forthcoming during this period, [redacted] indicated that he would be amenable to fulfilling his role in the operation at any other future date that telephonic contact can be established with him. The conversation, setting up the reception of the drop instrument by [redacted] at American House, will follow in this manner: 1.3(a)(4)

JOHN: "Hello, Gino (diminuitive of Luigi). This is John. Could you play Bingo Thursday evening?"

[redacted]: "Yes, I'll see you there." 1.3(a)(4)

JOHN: "Good, I'll see you Thursday."

OR

[redacted]: "No, I'm busy on Thursday." 1.3(a)(4)

JOHN: "Sorry. How about next week?" (To which [redacted] will respond affirmatively.) 1.3(a)(4)

b. After receiving the call on either Tuesday or Wednesday morning, [redacted] will attend the Bingo game at American House on Thursday evening circa 2045. (Note: [redacted], in the company of his wife and other friends, has previously attended American House. His wife is an avid Bingo player.) 1.3(a)(4)

c. Between 2100-2115, either [redacted] or [redacted] will load the magazine rack in the second floor toilet with the drop instrument, previously pouched to [redacted] for [redacted]. If the toilet is occupied during this period, [redacted] or [redacted] will return between 2200-2215 to load. 1.3(a)(4)

d. At approximately 2130 hours, [redacted] will proceed to the men's room at 2130 (2230, if toilet is occupied) and 1.3(a)(4)

[redacted]

[redacted]

retrieve the drop packet from the magazine rack. Upon retrieving the packet, [redacted] will mark a red slash on the top left side of the magazine rack. This will indicate to [redacted] or [redacted] that the drop has been securely serviced.* 1.3(a)(4)

e. On Friday, [redacted] will make a dry run past both the drop site and signal site for [redacted] (Complete instructions, written in Italian, directing [redacted] to the precise drop and signal sites will be prepared and wrapped around the drop packet.) 1.3(a)(4)

f. On Saturday, [redacted] will make the actual drop emplacement for [redacted] He plans, tentatively, to use his car, parking near the actual drop site, and will walk immediately to the site, emplace the packet, and then make the cover phone call. [redacted] pointed out that this tactic is compatible with patterns previously demonstrated to his surveillants. Such a maneuver forces the surveillance car to halt some distance behind [redacted] By the time the surveillance can either follow [redacted] into the drop area or assume a positive surveilling posture, [redacted] is confident that he will be able to have the drop loaded with time to spare. 1.3(a)(4)

g. Later the same day, if cover for action can be smoothly devised, [redacted] will go to the assigned signal site and indicate that he has loaded the drop by making the prescribed signal for [redacted] If [redacted] is unable to make the signal on Saturday, he will put the signal up before 10:00 a.m., Sunday. 1.3(a)(4)

h. The same day, Saturday, after loading the drop, [redacted] will return (probably in the evening) to American House, enter the second floor men's room, and mark a red slash on the top right side of the magazine rack. It was emphasized that this action must be performed by 2400 hours, Saturday. 1.3(a)(4)

---

*If impossible to load or service drop on this particular Thursday, the same procedure will be invoked automatically for the preceding Thursday.

[redacted]

i. [redacted] or [redacted], upon viewing the second red slash on the magazine rack, will prepare to phone [redacted] at precisely 1000 hours, Sunday--the red mark indicating that [redacted] has successfully loaded the drop for [redacted] 1.3(a)(4)

4. [redacted] was given only the sterilized portions of the drop and signal sites for study. 1.3(a)(4)

22 July 1961

MEMORANDUM FOR THE RECORD

SUBJECT: Briefing of General Maxwell Taylor on [redacted] Material

1.3(a)(4)

1. This morning Mr. Helms met General Taylor and discussed [redacted] for about thirty minutes. During the course of this meeting, General Taylor read all of the material we had prepared summarizing the case with keen interest. (See [redacted]

1.3(a)(4)

2. Among his comments were:

a. "This is the kind of thing a lot of us don't hear anything about."

b. "I think Allen ought to brief the President on this and let him know what we have here."

3. General Taylor asked to be put on future distribution for all the [redacted] material, and said he wanted to see the following reports which had already been disseminated or were in process.

1.3(a)(4)

a. The ICBM program

b. The shooting down of the RB-47

c. The shooting down of the U-2

d. Soviet plans for Berlin

e. Circumstances of Nedelin's death

[redacted]

1.3(a)(4)

[redacted]

[redacted]

APPROVED FOR RELEASE
31 MAR 1992

[redacted]

1.3(a)(4)

f. Translation of the Field Service Regulations

g. All of the VOYENNAYA MYSL articles

4. Mr. Helms believes the General would also be interested in seeing the map of the GFSC paper exercise when available.

5. At one point General Taylor expressed surprise at source's statement that early warning was the prime Soviet intelligence objective.

6. At another point the General remarked that it would be very interesting to see whether the reassignment of senior officers predicted by [redacted] actually came about. 1.3(a)(4)

7. Mr. Helms wants me to take to General Taylor on Monday, 24 July, the above mentioned reports on the ICBM, the RB-47, the U-2 and plans for Berlin.

John M. Maury
Chief, SR Division
